# TEST FACILITY STAGES AND OPTICS

CERN, 5<sup>th</sup> February

# Goals of a CERN ERL Test Facility

- Test facility for SCRF cavities and modules
- Test facility for multi-pass multiple cavity ERL
- Test facility for controlled SC magnet quench tests
- Injector studies: DC gun or SRF gun
- Study reliability issues, operational issues!
- Could it be foreseen as the injector to LHeC ERL?

TARGET PARAMETER*	VALUE	*in few stages
Injection Energy [MeV]	5	
Final Beam Energy [MeV]	900	
Normalized emittance $\gamma\epsilon_{x,y}$ [ $\mu\text{m}$ ]	50	
Beam Current [mA]	10	
Bunch Spacing [ns]	25 (50)

## **3. TEST FACILITY FOR SC MAGNET TESTS**

# Controlled quench tests of SC magnets

WE ARE INVESTIGATING THE POSSIBILITY OF USING THE TEST FACILITY  
FOR SC MAGNET TESTS

Requirements in terms of:

- Beam energy, intensity and pulse length (energy deposition)
- Space for the magnets installation (possible tests of cable samples and full cryo magnets)
- Cryo requirements
- Vacuum requirements
- Powering needs

# Controlled quench tests of SC magnets

Study beam induced quenches (quench thresholds, quenchino thresholds) at different time scales for:

- SC cables and cable stacks in an adjustable external magnetic field
- Short sample magnets
- Full length LHC type SC magnets

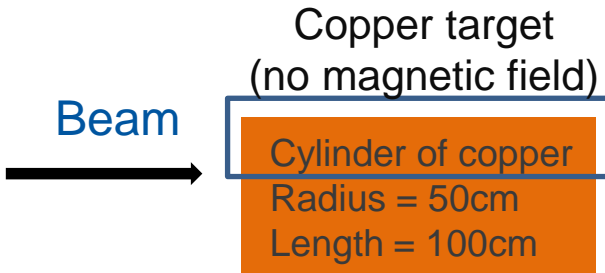

Quench limits of LHC dipole as expected from QP3 simulations for different pulse durations

## MB quench limit 3.5 TeV

**1 GeV = 1.602 x 10<sup>-7</sup> mJ**

MB quench limit 450 GeV is 140mJ/cm<sup>3</sup> in 10ms:

~2.2 x 10<sup>9</sup> e<sup>-</sup> @ 1GeV necessary

MB quench limit 7 TeV is 16 mJ/cm<sup>3</sup> in 10ms:

~2.6 x 10<sup>8</sup> e<sup>-</sup> @ 1GeV necessary

# Summary

- The concept of the ERLTF is designed to allow for a staged construction with verifiable and useful stages for an ultimate beam energy in the order of 1 GeV
- A sketch of the ERLTF optics configuration is provided and other options are under investigation
- First analysis of having controlled quench tests of next generation superconducting magnets has been carried out. Beam parameters seem to match the requirements....**further investigation is required!**
- **Complete the optics layout for Steps 2 and 3 and make a second-order analysis**
