

Transition from EGEE-II to EGEE-III Biomed cluster

V. Breton – J. Montagnat

www.eu-egee.org

INFSO-RI-508833

EGEE Review

- provide support for selected services of particular interest to the biomed community : AMGA, MOTEUR (66PM)
- prepare the migration to EGI in the life sciences sector (12PM)
- application porting in the fields of medical imaging, bioinformatics and drug discovery (48PM)

- support to AMGA and MOTEUR users
- support to application porting
- MDM + LPC medical image portal
- Interaction with Taverna2
- Interaction with VLe VBrowser (an LFC interface is currently being implemented) (external project)
- LFC compliant SRB (external project)

• MOTEUR and AMGA users

eGee

- EGEE users in the life sciences sector (bioinformaticians, medical image analysists, drug discovery industry); tests deployments in clinics expected in the lifetime of the project.
- NA4 application porting support

- Support for selected services
 - AMGA (33PM): UPV and CNRS (LPC Clermont-Ferrand)
 - MOTEUR (33PM): CNRS (CREATIS and I3S)
 - Taverna2 (UMAN / I3S)

eGe

- Support to application porting:
 - Bioinformatics (16PM): CNR-ITB, UPV and CNRS (IBCP)
 - Medical Imaging (16PM): UPV and CNRS (CREATIS and I3S)
 - Drug discovery (16PM): CNRS (LPC Clermont-Ferrand)
- Migration to EGI (12PM): CNRS (LPC Clermont-Ferrand)

- Number of applications in the life sciences sector
- Number of users in the Virtual Organizations of the life sciences sector
- Resources consumed by the Virtual Organizations in the life sciences sector

Open source services

- Tools repository (minimally webpage list of links; possibly semantic service index in collaboration with external project NeuroLOG)
- May be needed to "clean-up" the biomed VO and reregister active users
- Ideally, a specific distribution (extended UI) with basic biomed tools should be packaged but there will be no manpower for this.
- The procedure for deciding accepted applications remains adhoc.

- Mechanisms: mailing lists, phone conferences, wiki (Joomla is not satisfying)
- Other EGEE bodies: TCG
- External communication
 - Web/wiki
 - iSTWG.
 - Conferences (from grid-oriented to end users-oriented:
 - HealthGrid
 - MICCAI (a grid specific workshop organized this year), RSNA.

- SVN/CVS and ETICS: ?
 - it is not clear the developers of specific services will agree to externalize their development base on a centralized biomed server
 - A constellation of development servers/tools is rather expected.
- Conference management system
- Mailman
- Wiki
