

Online and offline tracking at high PU

Monday 11 August 2014 14:57 (15 minutes)

The talk should cover: the challenges of track reconstruction at Run 2 and in the high PU environment of phase-1; the expected fakes and efficiencies; how we can make the tracking robust at high PU, still keeping the reconstruction time under control. The online tracking, that is run at the high level trigger, should also be discussed.

Presenter: ELSING, Markus (CERN)

Session Classification: Parallel Session 5
