

Linear e+e- colliders: ILC and CLIC

Thursday 14 August 2014 09:45 (25 minutes)

This talk should cover, in particular, (i) the readiness of ILC and CLIC, expected performance, time lines & compatibility; (ii) the plan/strategy to reach nominal beam size of a few nm at nominal intensity; (iii) the upgrade paths towards higher luminosity and towards higher energy; (iv) the consequences of CLIC power requirements at 3 TeV.

Presenter: YOKOYA, Kaoru

Session Classification: Future Machines
