

Expectation for e+e- collisions

Monday 11 August 2014 13:45 (25 minutes)

This talk will describe (i) expectation of sensitivity to BSM physics provided by future e+e- machine such as ILC, TLEP or CepC; (ii) which models would best be investigated experimentally: both in terms of signatures, but also from the point of view of theoretical uncertainty; (iii) expectation from « approved » e+e- machines

Presenter: Prof. MIHOKO, Nojiri (KEK)

Session Classification: Parallel Session 3
