

Overview of the experimental results by the CMS Collaboration

Monday, May 23, 2011 12:20 PM (25 minutes)

We will present early results of the CMS experiment from PbPb collisions at $\sqrt{s_{NN}} = 2.76$ TeV, probing quark and gluon matter at unprecedented values of energy density. The capabilities of the CMS apparatus allows us to investigate various hard probes, as well as bulk particle production and collective phenomena, using the calorimetry, muon and tracking systems covering a large range in pseudorapidity, complemented by a flexible two-level trigger system.

Presenter: WYSLOUCH, Bolek (MIT)

Session Classification: Overviews
