

Vienna workshop on

Jets and Missing Energy

Getting ready for 13 TeV

HEPHY

Institute of High Energy Physics

August, 25 - 27th 2014

Vienna University of Technology, Austria

We are approaching the end of the first long shutdown after which the LHC will again deliver high energy particle collisions. The large increase in the number of pile-up interactions will make the reconstruction of jets and missing energy a challenging task, necessitating advanced algorithms to mitigate these effects.

This is a three-day CMS workshop focusing on preparations for Run II and the assessment of readiness for the reconstruction of jets and missing energy in a high pile-up environment.

Registration and Agenda
