

The DIRAC Data Management System (poster)

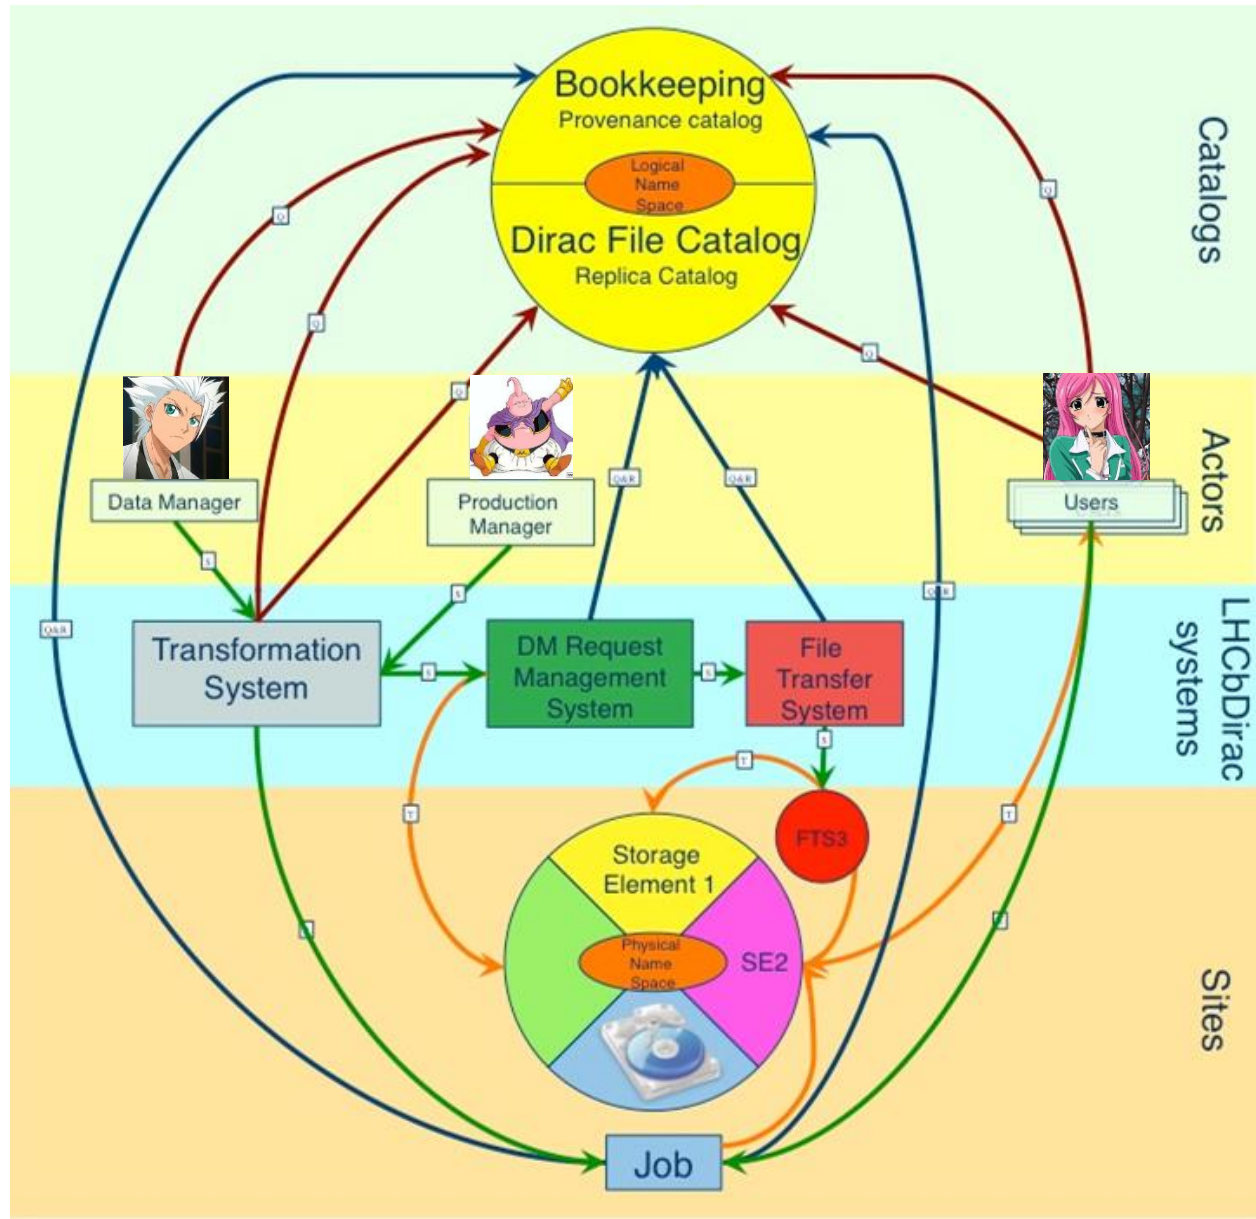

- Probably one of the less verbose posters at this conference... Why?
- Data Management concepts are simple and building an actual system is logically also simple
 - Implementation is usually not as simple
 - Abstraction allows to cope with implementation changes in the underlying services
- If a system is simple, it can be run by a small team
 - No need for distributed manpower...
 - The agents and services do all the jobs!
- LHCb Data Management
 - 2-3 developers
 - Operations: one single person part time
 - ↳ Requests submission
 - ↳ Operations daily follow up (even possible from CHEP ;-)
- Thanks to Céline Cornet for the design of the LHCbDirac logo and design review of the poster
