

WP4: Monitoring and Usability

J. Schovancová, T. Wenaus
Brookhaven National Laboratory

BigPanDA Workshop @ ANL, 2014-03-06

- Documentation, Jira, SVN and Git updates, logo
- BigPanDA monitoring package, requirements
- Monitoring deployment model, instances, APIs
- SW installation
- Progress on the production instance

Documentation

- BigPanDA monitoring
 - ✓ **BigPanDAMonitoring**
 - ✓ **BigPandaHTCondorAPI**
 - ✓ **BigPanDAMonitoringEnvProd**
 - ✓ **BigPanDAMonitoringDevelopers**
- BigPanDA instance installation
 - ✓ **BigPandaInstanceInstallation**
- Issue tracking: Jira
 - ✓ <https://its.cern.ch/jira/browse/BIGPANDA>
 - ✓ <https://its.cern.ch/jira/browse/ATLASPANDA>
- Code versioning
 - ✓ SVN: updated structure of pilot and bigpandamon repositories
 - ✓ Git: brand new project on GitHub
 - <https://github.com/PanDAWMS>

New PanDA logo

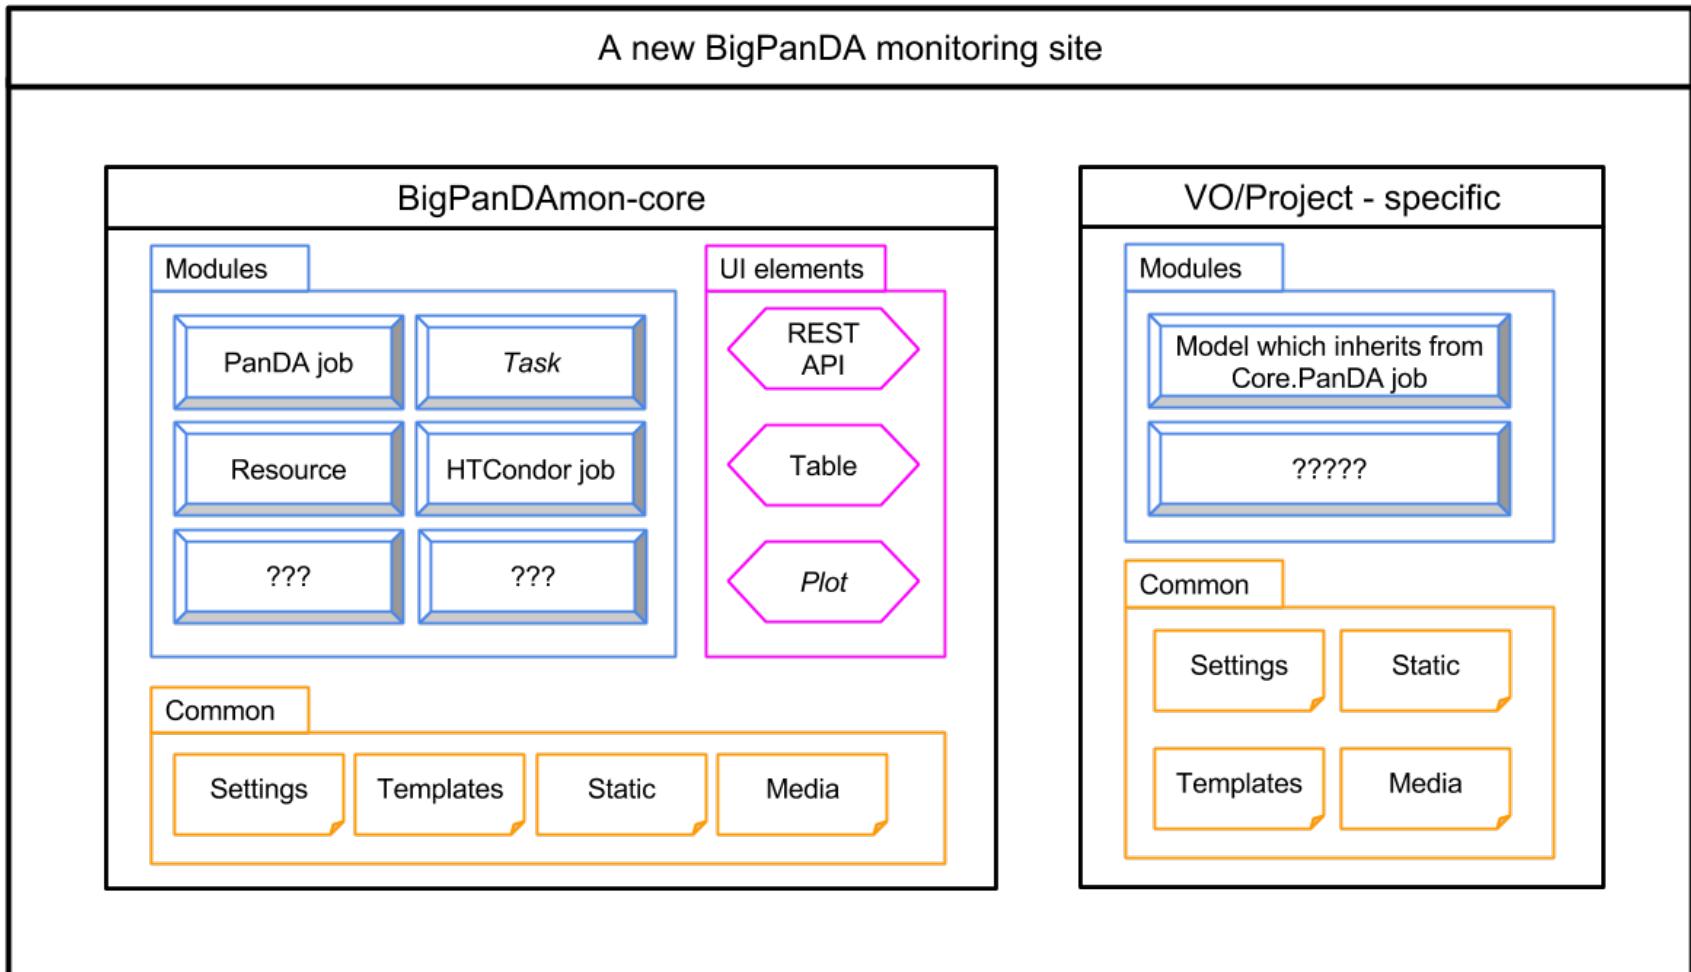

Thanks to Lisa Selwitz

BigPanDA monitoring package

- Modular, easy to bring up a new project/VO
- Clear separation between data access and visualization
- Runs on top of Oracle or MySQL DB backends
- Comes with documentation for developers
 - Describes configuration and modules
- Deployed with RPMs
- Recently refactored to ensure modularity and multi-developer collaboration

<http://pandawms.org/bigpandamon/>

BigPanDamon modules structure

https://twiki.cern.ch/twiki/bin/view/PanDA/BigPanDamonitoringDevelopers#Modules_structure

Emerging BigPanDamon family

➤ ATLAS

- ✓ PanDA job monitoring (Jarka)
- ✓ ProdSys2 UI (Misha, Dmitry, Stavro)
- ✓ Intelligent networking UI (Artem)

➤ Other projects/VOs

- ✓ Large Synoptic Survey Telescope monitoring
- ✓ HTCondor monitoring
 - testbed: <http://pandawms.org/htcondortest/htcondorjobs/#>
 - ✓ Friendly collaboration with Todd Tannenbaum of the HTCondor team
 - ✓ Fruitful collaboration with Peter Love: leverage mature backend proven in apfmon, use BigPanDamon visualization

RPMs

- PanDA ecosystem grows, need to standardize deployment process for the components of a PanDA instances
 - ➔ Refrain from “svn up” updates, provide RPMs
 - ✓ PanDA server
 - ✓ BigPanDamon family
- Using python distutils
 - Currently manual build, distribution via CERN AFS
 - In progress: adopting build system of Dashboard/COSMIC using Koji at CERN
 - Automatic tagging, pylint & jslint code check
 - RPM repository to be available

OASIS

- OASIS: cvmfs for OSG
 - SW distribution to grid WNs
- LSST OASIS
 - ✓ OASIS account available
 - ✓ Test to cache a dummy file was successful
 - ✓ Ready to test real SW installation as provided by LSST experts and deployment/access on WNs

BigPanDA instance update

- PanDA server: panda-server-mysql-0.0.1
- BigPanDA monitoring: bigpandamon-core-0.0.2, -atlas-0.0.2, -lsst-0.0.1
- APF2 instance with standalone proxymanager installed
 - ✓ Pilot wrappers submitted with **users' proxy**
 - Proxy delegation via myproxy server
- Successfully submitting LSST jobs to BNL opportunistic resources
 - ✓ Submission of a LSST pipeline stream from the pipeline admin interface
 - ✓ Pipeline communicates with BigPanDA-Pipeline IF
 - ✓ Job is inserted into the BigPanDA DB
 - ✓ Pilot runs on a WN, picks up job from PanDA, and executes the payload
 - TODO: adapt pilot to enable input-/output-less jobs
 - ✓ Payload communicates with a web service to talk to pipeline

Thank you for your attention!
