THE MISSIONS OF THE ISDD (1)

THE MISSIONS OF THE ISDD (2)

A WIDE RANGE OF PROJECTS

From Design to Integration (mechanics, optics, electronics, detectors, metrology, installation, assembling and tests)

A LARGE NUMBER OF PROJECTS

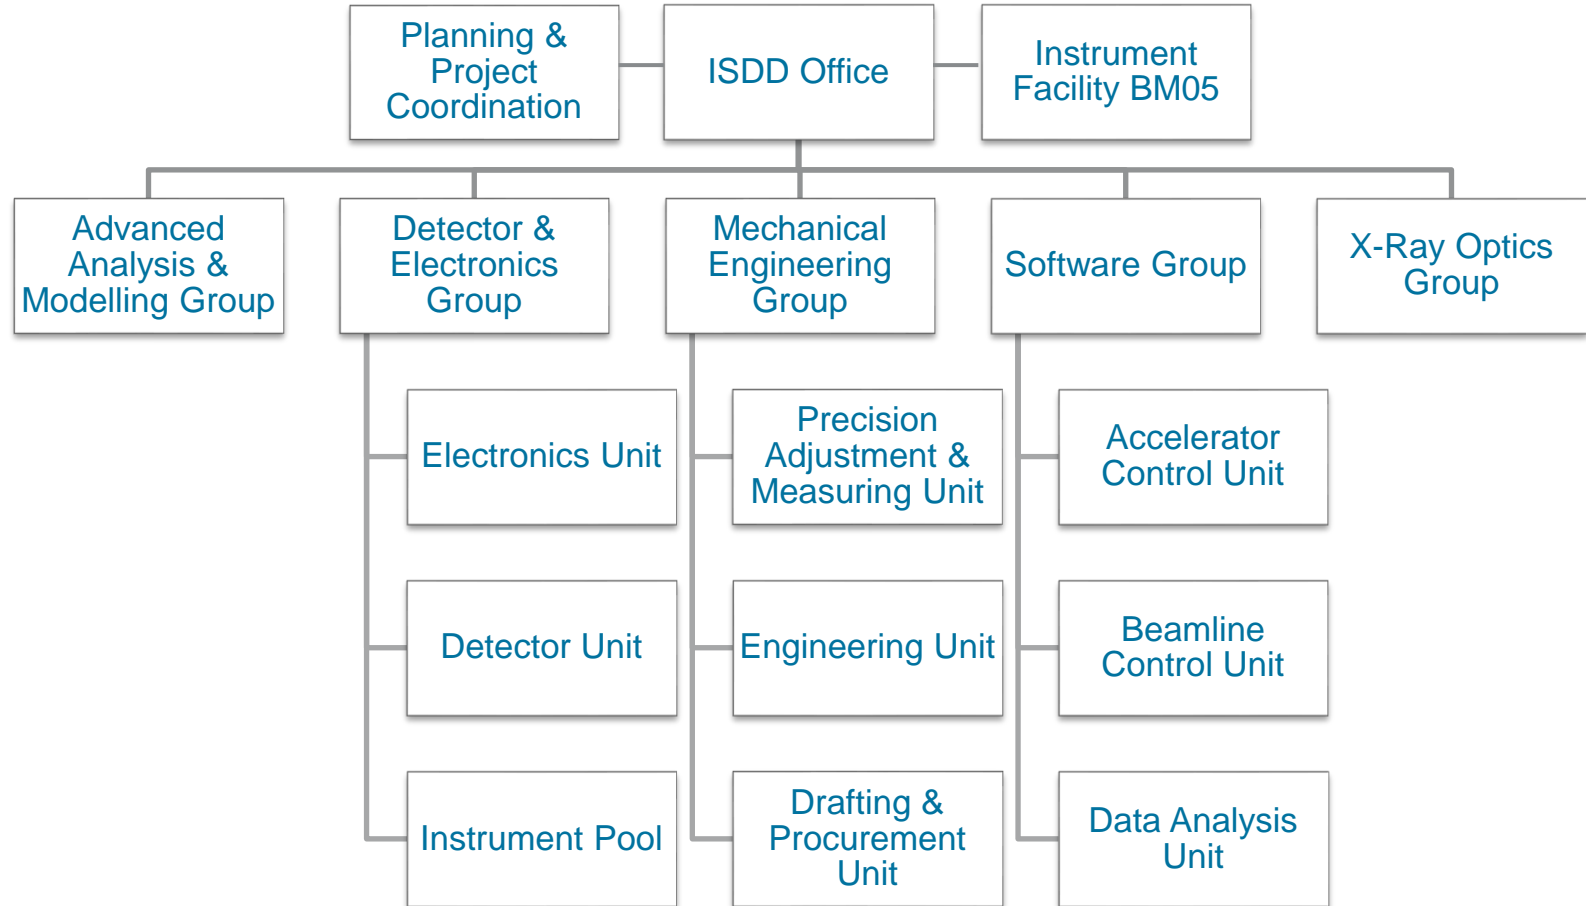

Operational activities (maintenance, support, assistance)
~ 60 projects of instruments, components and control
related to the operation of Accelerators & BLs in 2014

UPGRADE PROGRAMME

~ 90 projects of instruments,
components and control in 2014

Continuous R&D to keep the facility at top of the art
~ 60 projects of R&D in 2014

ORGANISATION TREE OF THE ISDD

A NEW DILEMMA FOR RESOURCE MANAGEMENT

**Projects
for Basic Operation**

- Small-scale
- Many
- Short notice
- Annual budget
- Unclear prioritisation

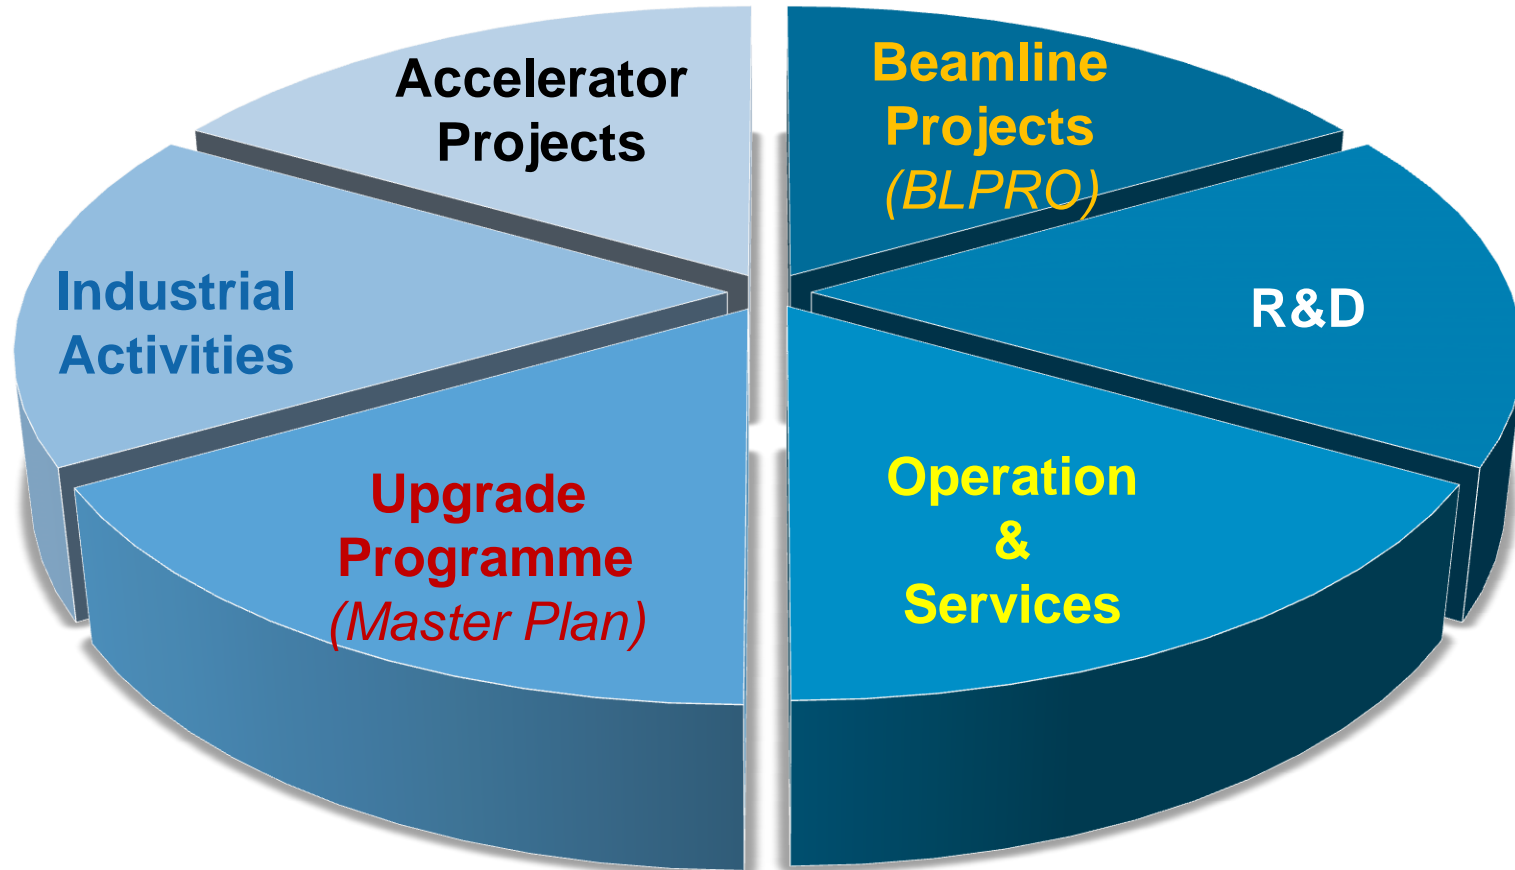

**Projects
for the Upgrade Programme**

- Large-scale
- Few and well documented
- Planned
- Multi-annual budget
- Clear prioritisation

both are equally important !

ISDD : SIX GENERIC ACTIVITIES (PROGRAMS)

- *All activities must be taken into account in resource management*
- *Relative activity weight varies with engineering areas*

COLLABORATIVE PROJECT MANAGEMENT TOOL (1)

Request management

Project & resource management

To centralise all the requests on a unique database

To validate the project relevancy and the cost & human resource needs estimation

To allocate the nominative resource on projects

To simulate the workload of units

To launch projects according to manpower capacity & priority ranking

COLLABORATIVE PROJECT MANAGEMENT TOOL (2)

To centralise all the requests on a unique database

A standard electronic form

Pre-filled and user friendly

Accessible to all the actors

To validate the
project relevancy
and the cost &
human resource
needs estimation

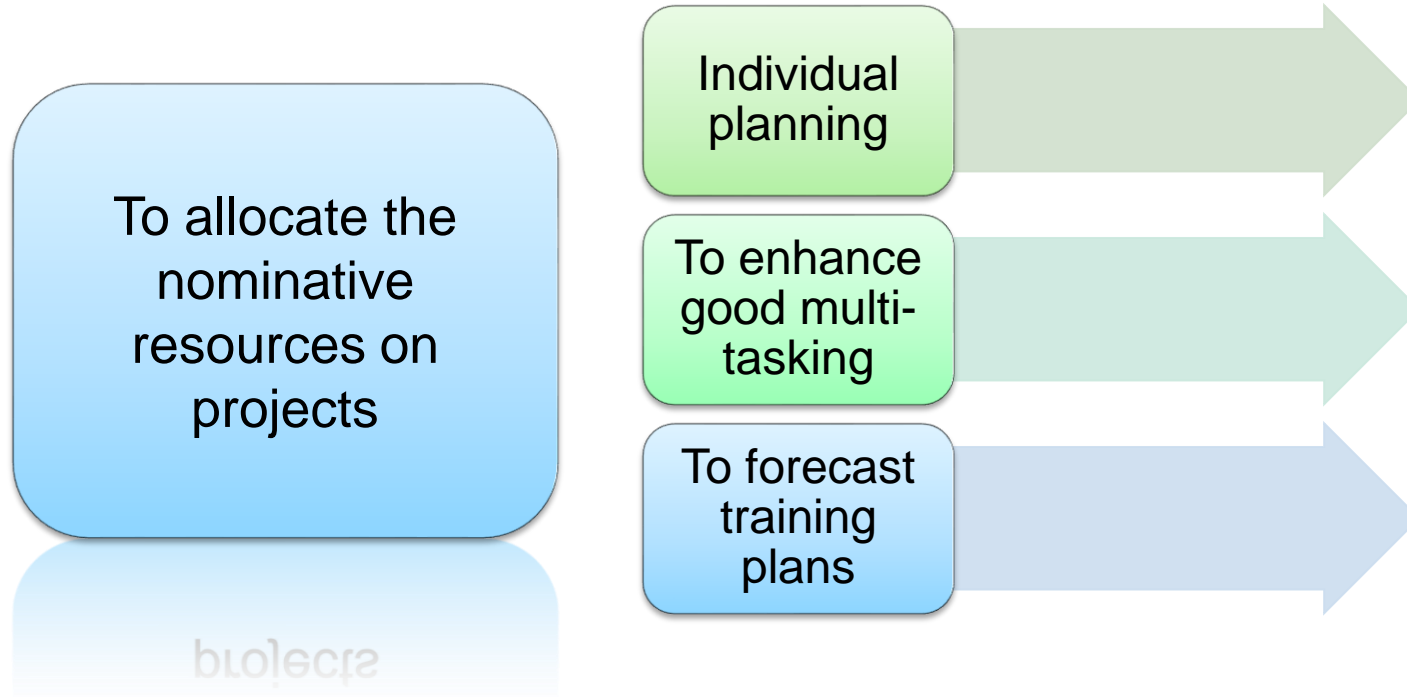

To encourage users in
defining deliverable(s)

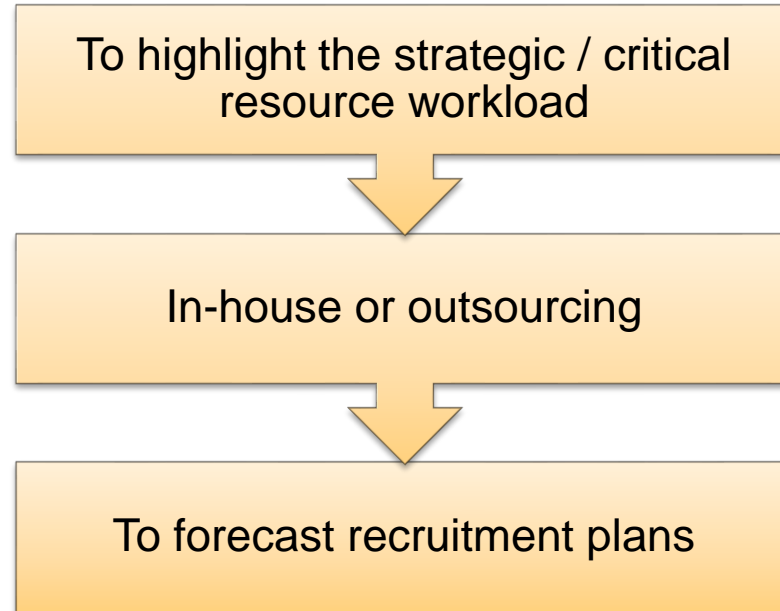

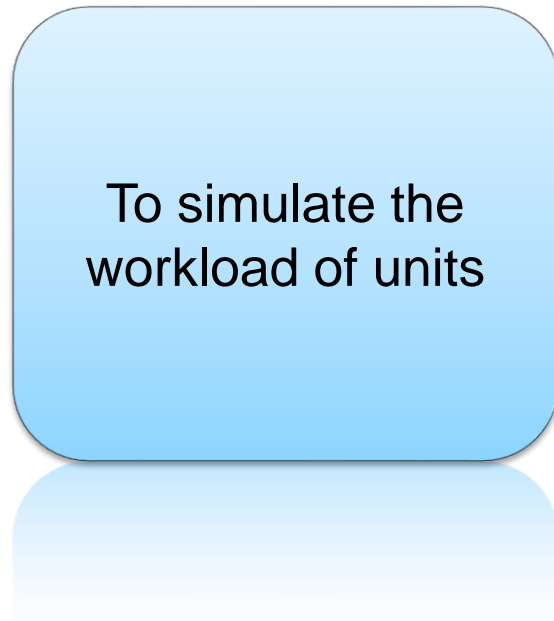

Scientific & Technical review
by relevant actors (workflow)

Cost and resource estimations
in *Full Time Equivalent*

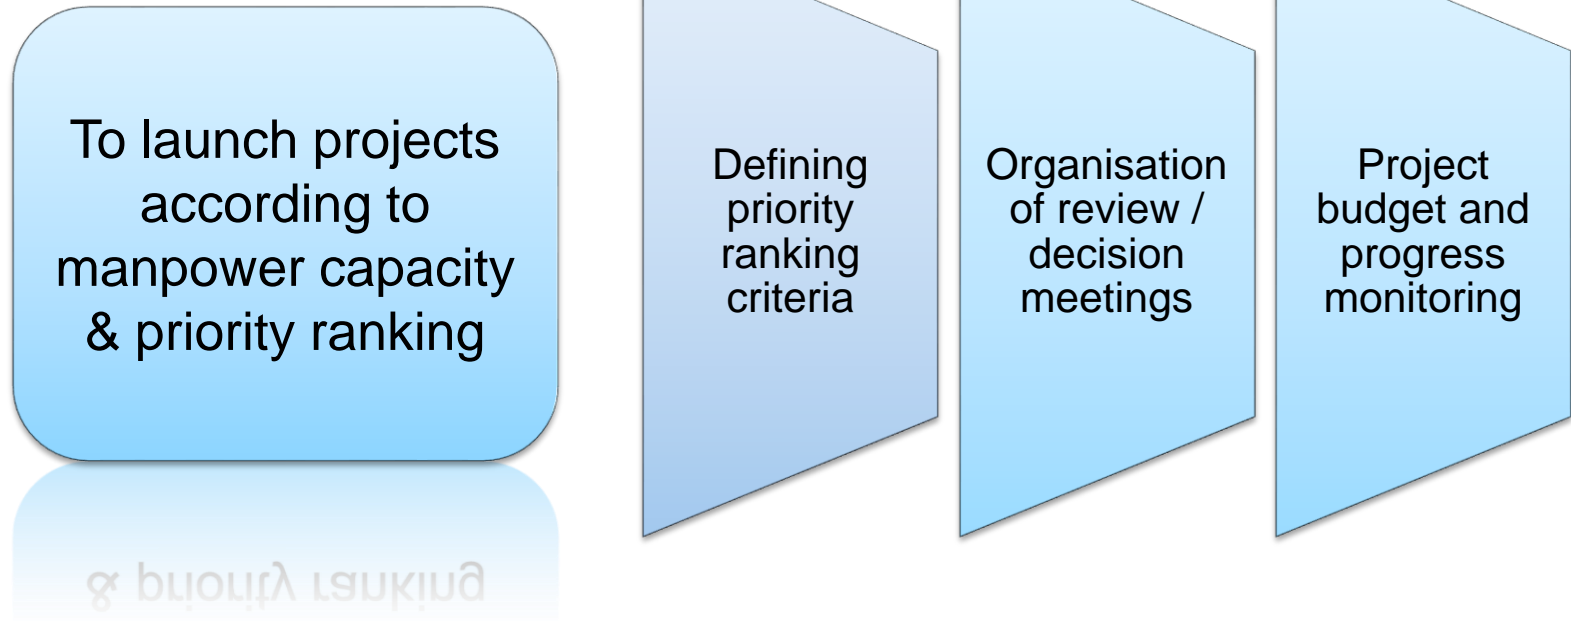

needs estimation

COLLABORATIVE PROJECT MANAGEMENT TOOL (4)

COLLABORATIVE PROJECT MANAGEMENT TOOL (6)

LONG-TERM HUMAN RESOURCE ALLOCATION

Mechanical Engineering Resource Allocation for Experiment Division
Men/month

Planned staffing evolution (part-time, retirement...)

YEARLY HUMAN RESOURCE ALLOCATION “OPTIMISED”

ENG_ [Engin | ENG_ [Engineering Unit]

Allocations Planning Load Summary by type

☒ Include sub-units

Detail by: Project type

Select the projects to be taken into account on the given period

January 1, 2014 - December 31, 2014

Resource loads per month

Week Month Quarter Year

— Nominal capacity

— Production capacity

■ Num days allocated Others

■ Num days allocated ASUP2 [Acc&source UPGRADE Phase II]

■ Num days allocated BLPRO [Beamline not UPGRA]

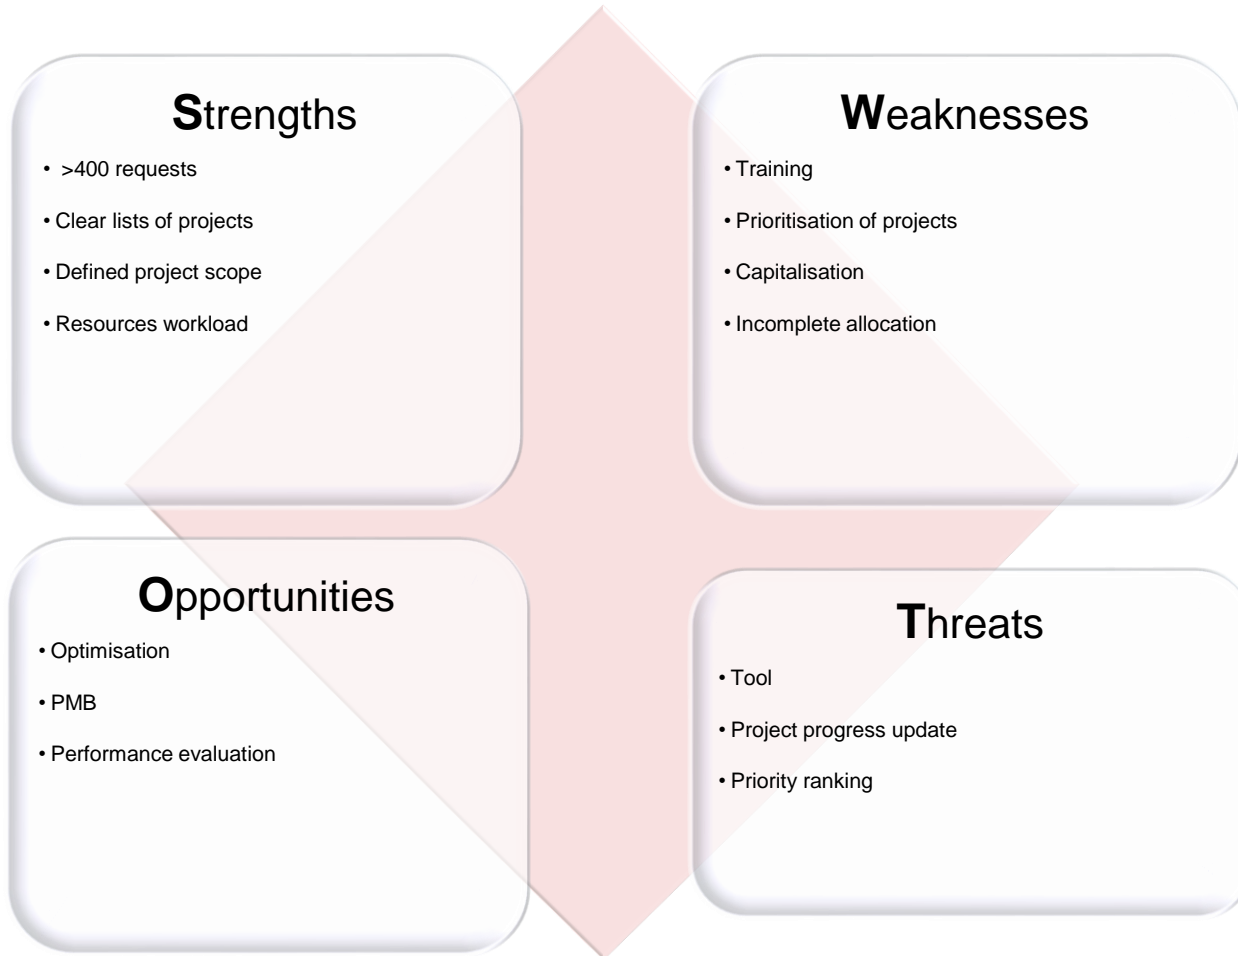

■ Num days allocated INDUS [Industrial project]

■ Num days allocated ISDRD [Research & Development]

■ Num days allocated OPSER [Operation & Services]

■ Num days allocated UPGRA [Upgrade Programme]

RESULTS : THE SWOT ANALYSIS

Strengths

- >400 requests created from 07 to 09/2013
- Clear and exhaustive lists of projects handled by the ISDD
- More precisely defined project scope
- Easily simulate resources workload + potential overload

Weaknesses

- Lack of training on PM Tool
- Vague prioritisation of projects
- Lack of capitalisation on past projects
- Incomplete resource allocation => skewed workload statistics

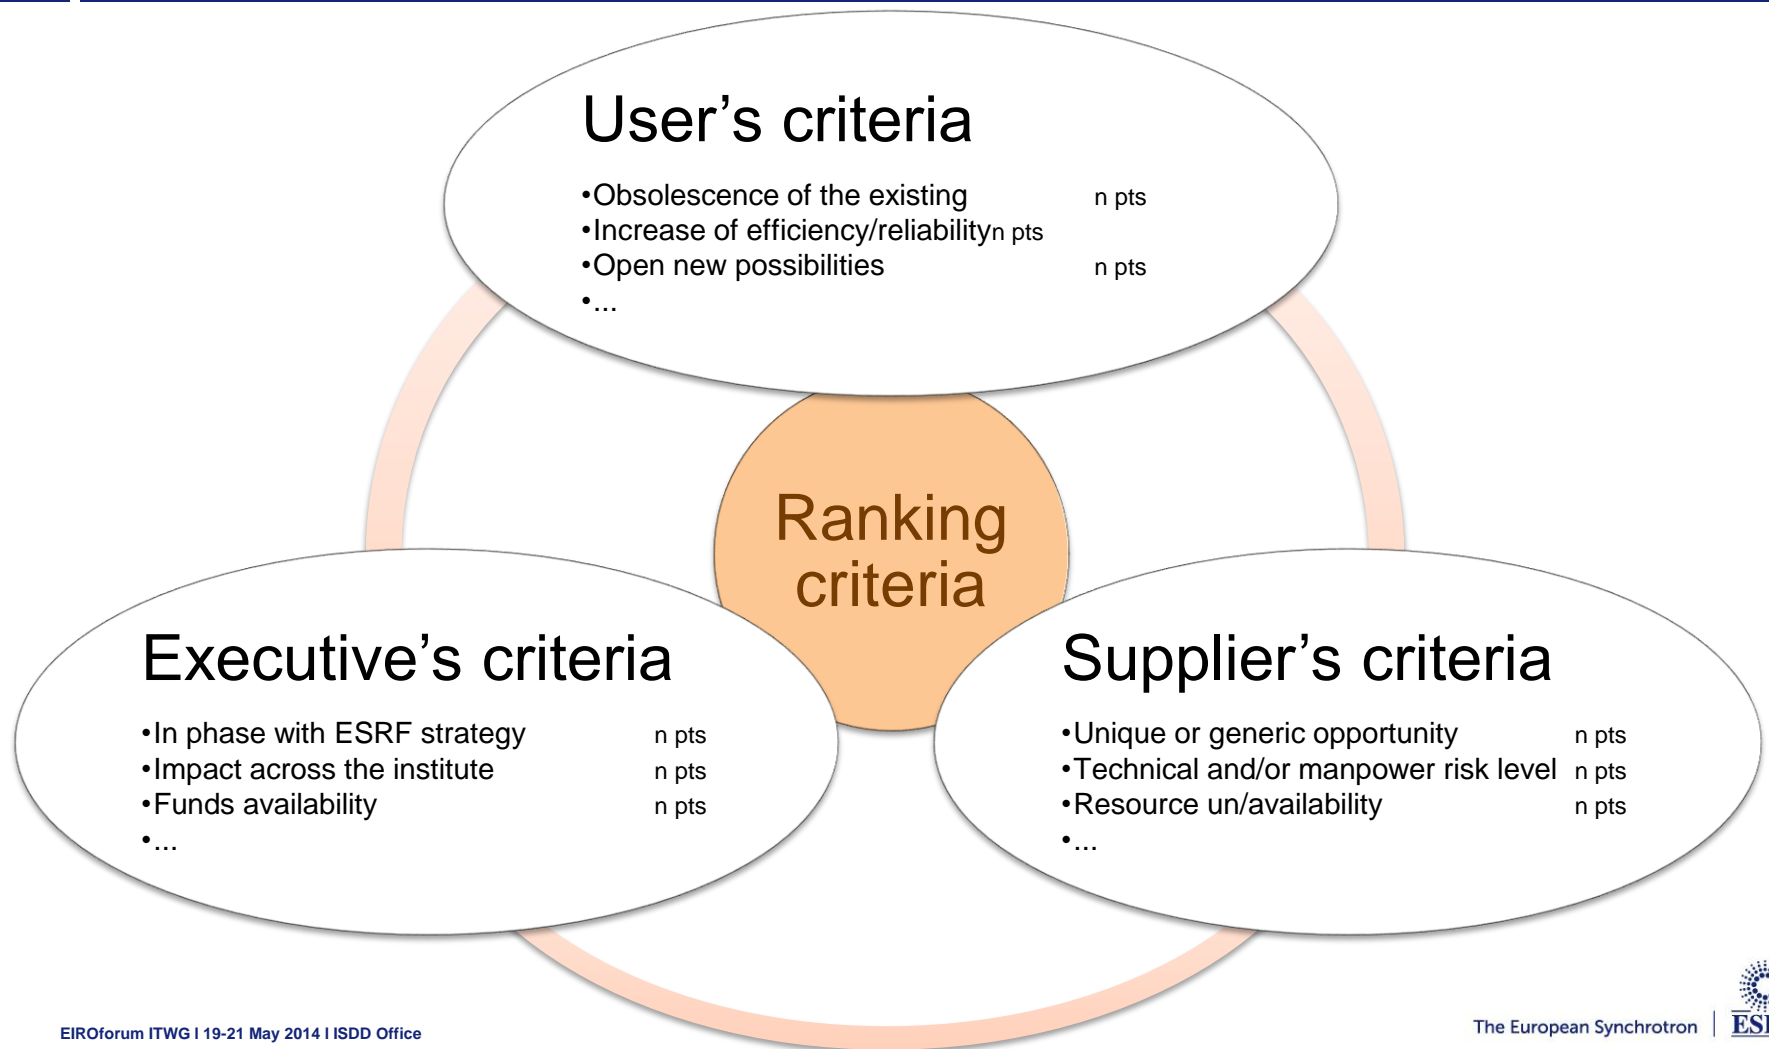

Opportunities

- UPgrade Ph1 projects + operation projects + R&D + Upgrade Ph2 perspective = more and more resource optimisation
- New Project Management Board promoting PM Tool for the whole institute
- Asset for evaluating staff performance

Threats

- Over-complicated tool discourages users
- Irregular project progress updates => deviation from the scope and/or the delivery date
- Too many projects launched simultaneously => high risk of bad multi-tasking and delays

Thank you for your attention
