

Suggestions for producing OR  
complete ATLAS 'official'  
Tools

# Examples for Artemis originated Tools

- Physics originated Detector performance studies
  - Tag and probe method
    - Already MPI has worked in developing the method
    - Thessaloniki-Nectarios is starting working on the method

# TrackInCalo Tool

- Use for muon isolation
- Validation studies
- Samples needed
- Use for identifying and measure catastrophic muons
- Validation studies
- Collaboration between Saclay and Thessaloniki. Others?
  - Define work plan and sharing of the work
  - Action items and deliverables
  - Define time scale

# Tag and Probe

- $Z \rightarrow \mu\mu$
- $Z \rightarrow ee$  ?
- $J/\psi \rightarrow \mu\mu$
- $J/\psi \rightarrow ee$ ?

- Define collaboration
- Workplan/action items
- Timescale

# Offline performance

## DQA/DQAMF

- Muons standalone
  - Muons combined
  - EMcalo -e/gamma
  - Tile -jets, MET
- 
- Define collaboration
  - Workplan/action items
  - Timescale

# Suggestions for more Artemis originated Tools

- Vertex finding -relevant to  $H \rightarrow 4l$ , to B-physics,...
- Statistical analysis Tools for extracting signal significance, limits..
- Isolation tools for e/gamma
- Tag and probe for Z &  $J/\psi$  electrons
- $B^+$  lifetime analysis and mass measurement

# Suggestions for more Artemis originated Tools

- Make validation plots in Physics analyses in RTT jobs.
- ...
