

## Outcome from the last phone meeting

- A new cvmfs repository should contain configuration and keys for repositories from other domains
- This repository should, at the same time, exist as RPM repository
- Stratum 1s are extended by a REST API so that they can order a list of stratum 1s for a client according to geographical location
- Regarding automatic discovery of site proxies, we follow the WLCG squid discovery task force

## Today's goals

- Agree on a configuration repository layout and operational model  
<https://pad.riseup.net/p/cvmfs-configuration>
- Agree on the Stratum 1 REST API  
<https://pad.riseup.net/p/cvmfs-stratum1>
