

Experiments expectations

This paper presents the expectations and the constraints of the experiments relatively to the commissioning procedure and the running conditions for the 2015 data taking period.

The views about the various beam parameters for the p-p period, like beam energy, maximum pileup, bunch spacing and luminosity limitation in IP2 and IP8, are discussed.

The goals and the constraints of the 2015 physics program are also presented, including the heavy ions period as well as the special running conditions.
