

Enabling Grids for E-science

CERN ROC in EGEE III

Diana Bosio, CERN ROC Manager

**EGEE-II / EGEE II SA1 Transition Meeting
CERN, Geneva
8 May 2008**

www.eu-egee.org

- **Diana Bosio** is taking over the role of CERN ROC manager – Good luck!

- ***Vision:*** To take over as many of the aspects of operations as possible from the COD and to work with the sites so that they take on significantly more responsibility for their own operations (rather than relying on the COD or ROC)
- Have all SLDs in place with the sites within the first year
- Get Nagios based monitoring for the ROC in place as early as possible in order to help other ROCs in deploying it.

- **Getting the smaller sites to take responsibility for themselves and be proactive in their operations**

- *What will be the status of this component at the end of EGEE III?*
 - It's not clear what will happen to the non-European sites after EGEE III
