

# CENF

-

## Secondary Beam Study Group

Cooling and Ventilation Pre-Design  
Integration study

11/4/2014

Michele Battistin

EN/CV/PJ

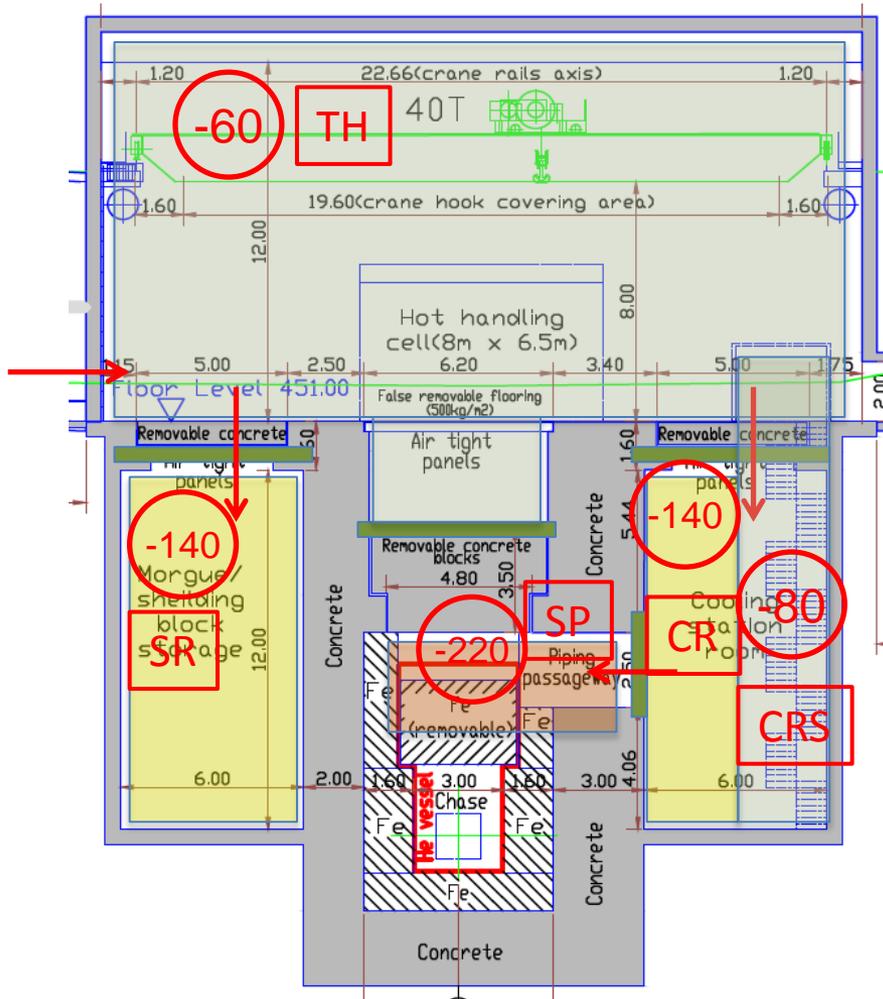

# Cooling and Ventilation design advancement

- Integration of the HVAC equipment
- Integration of the hydraulic equipment
- Helium solutions for target and decay pipe cooling
- Helium vessel conditioning

# CENF ventilation system

- Pressure cascade
- Equipment integration

# Pressure cascade

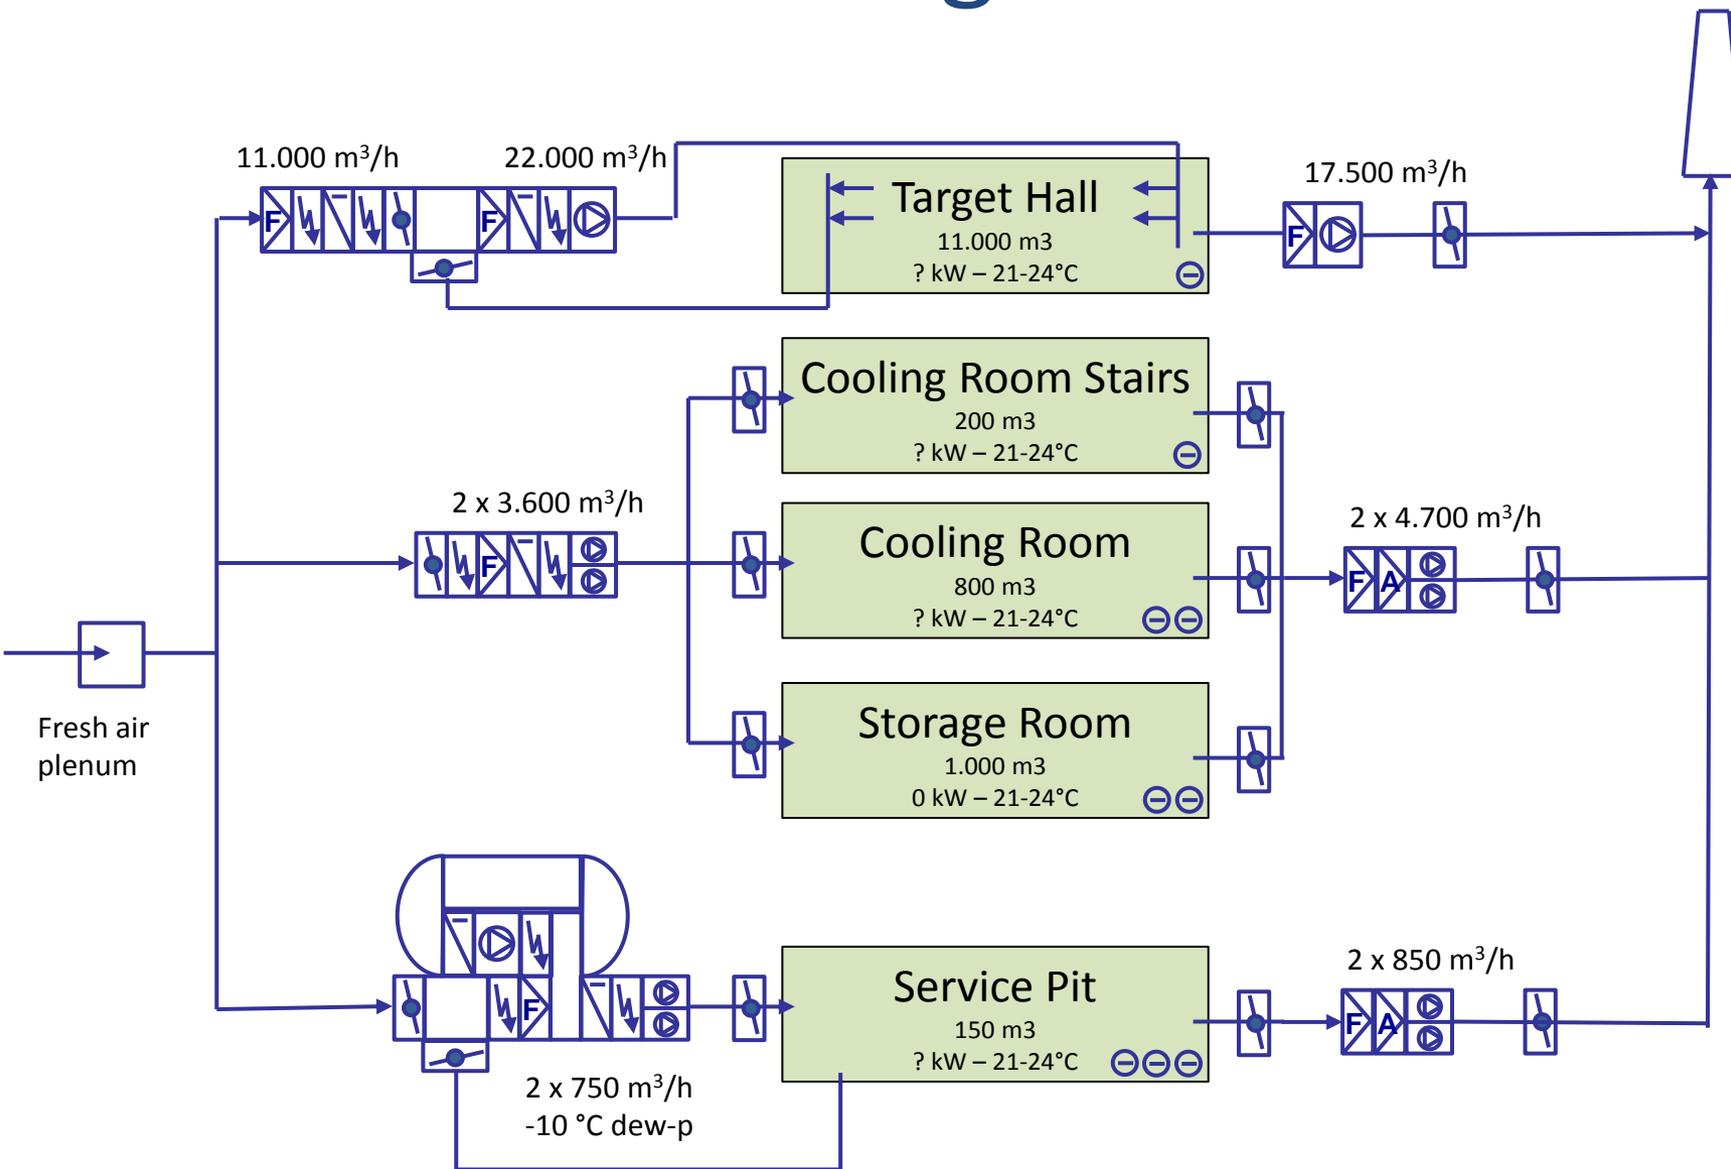

## ISO 17873:2004

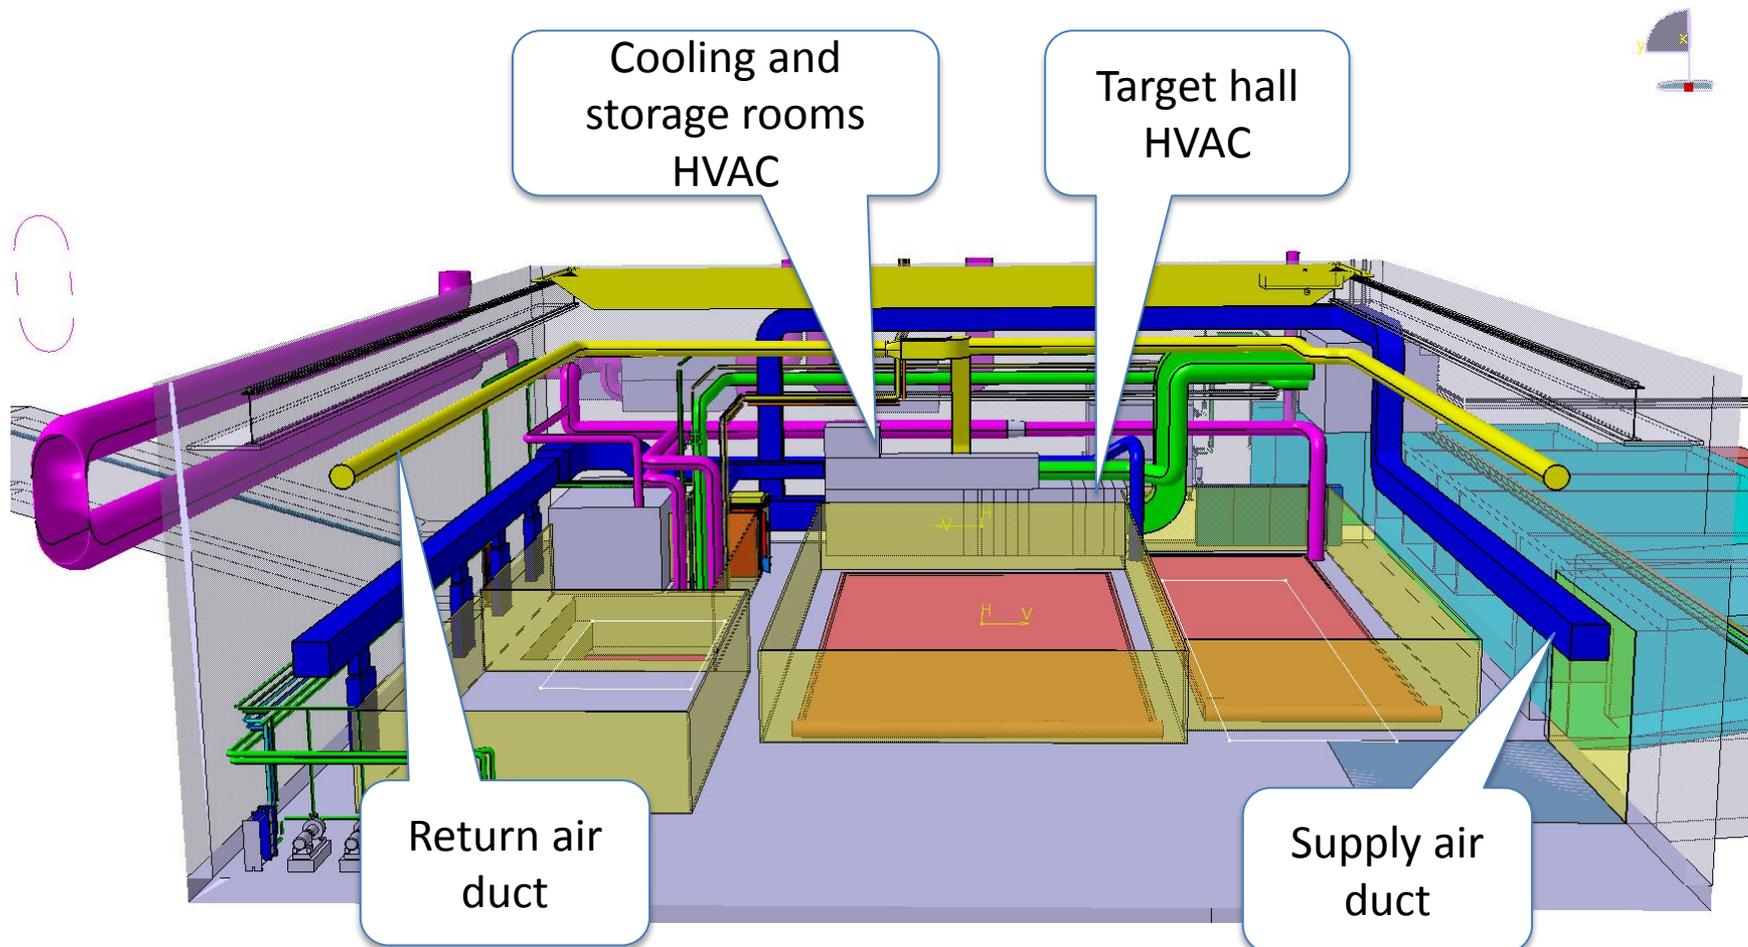

Room	Classification ISO 17873	Volume exchange (h <sup>-1</sup> )	Pressure (Pa)
TH	C1	1	-60
CRS	C1	2	-80
CR	C3	2	-140
SR	C3	2	-140
SP	C4	5	-220

Building leak rate: 0.6 Vh<sup>-1</sup>

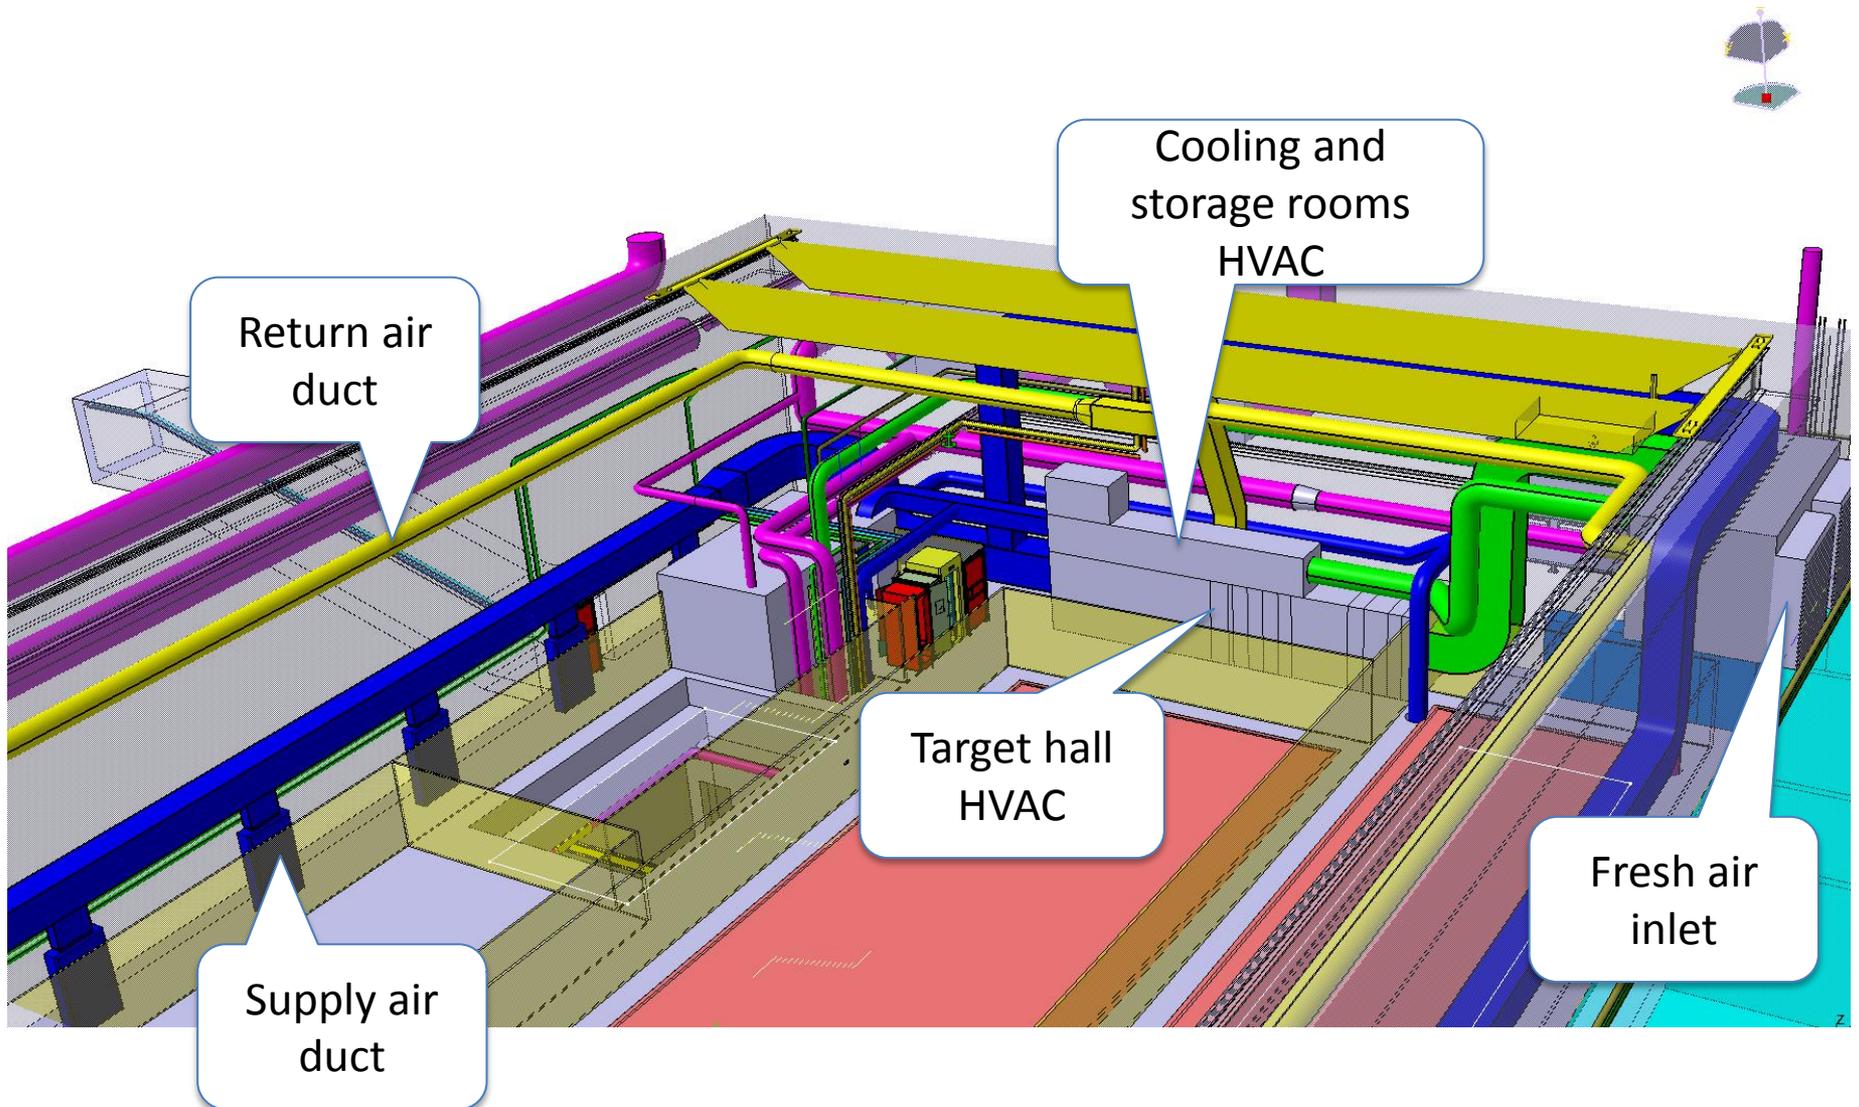

# AHU Target Area

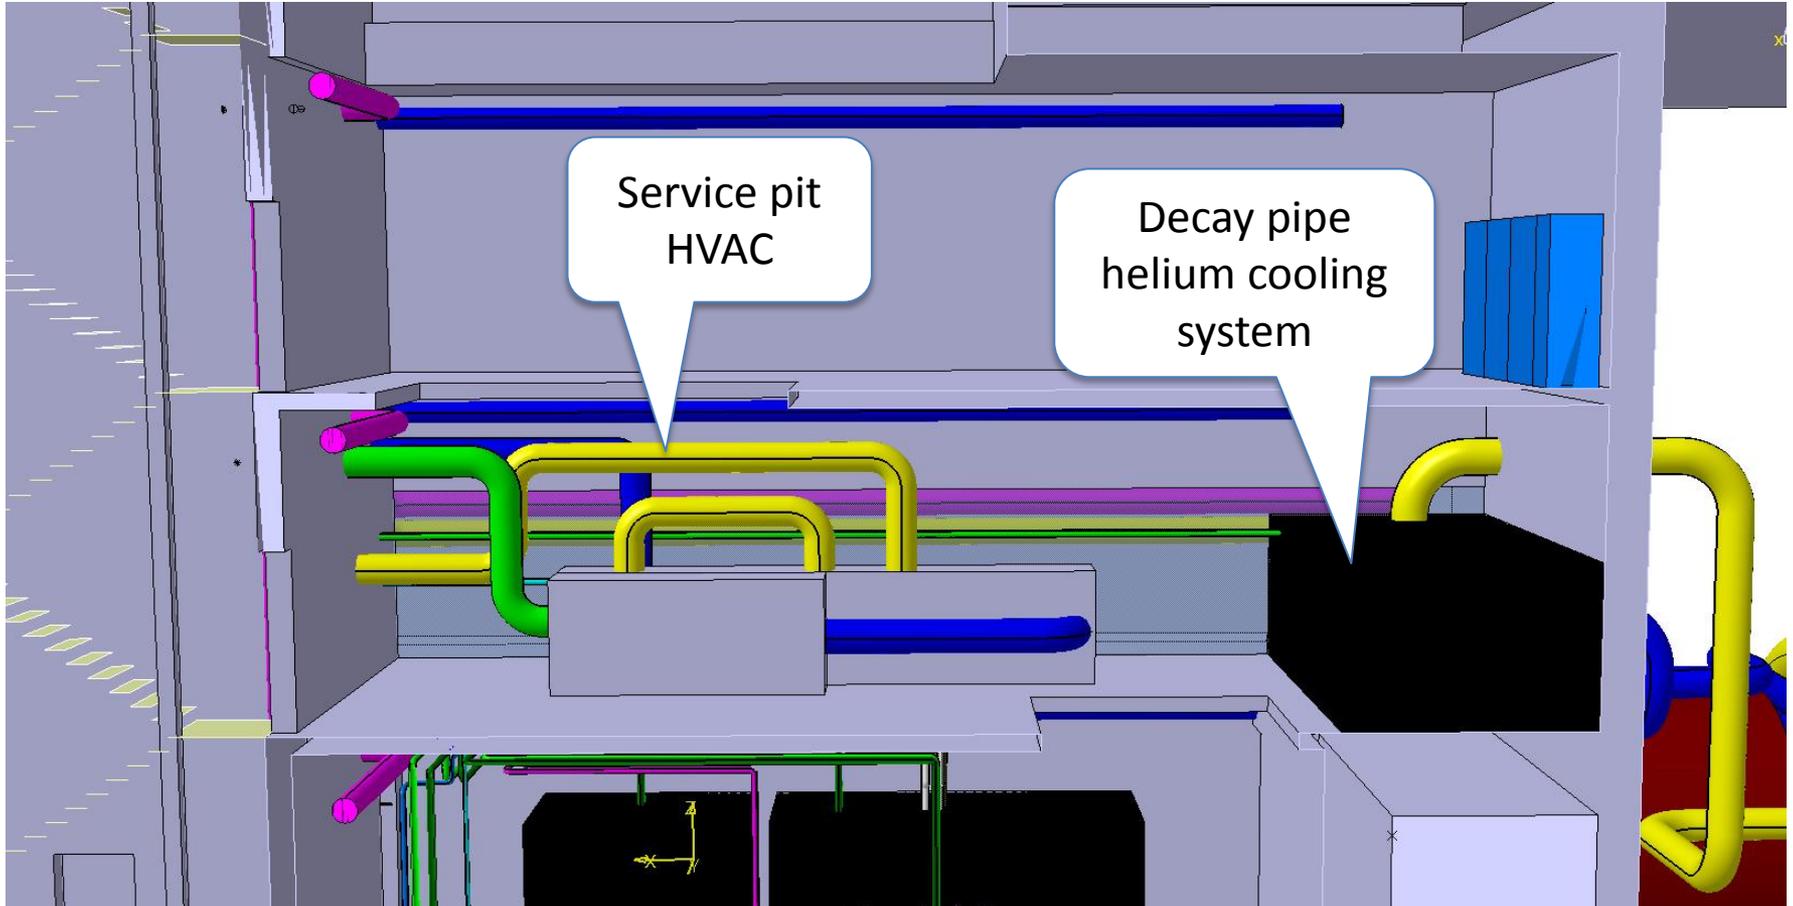

# HVAC integration – Target Hall

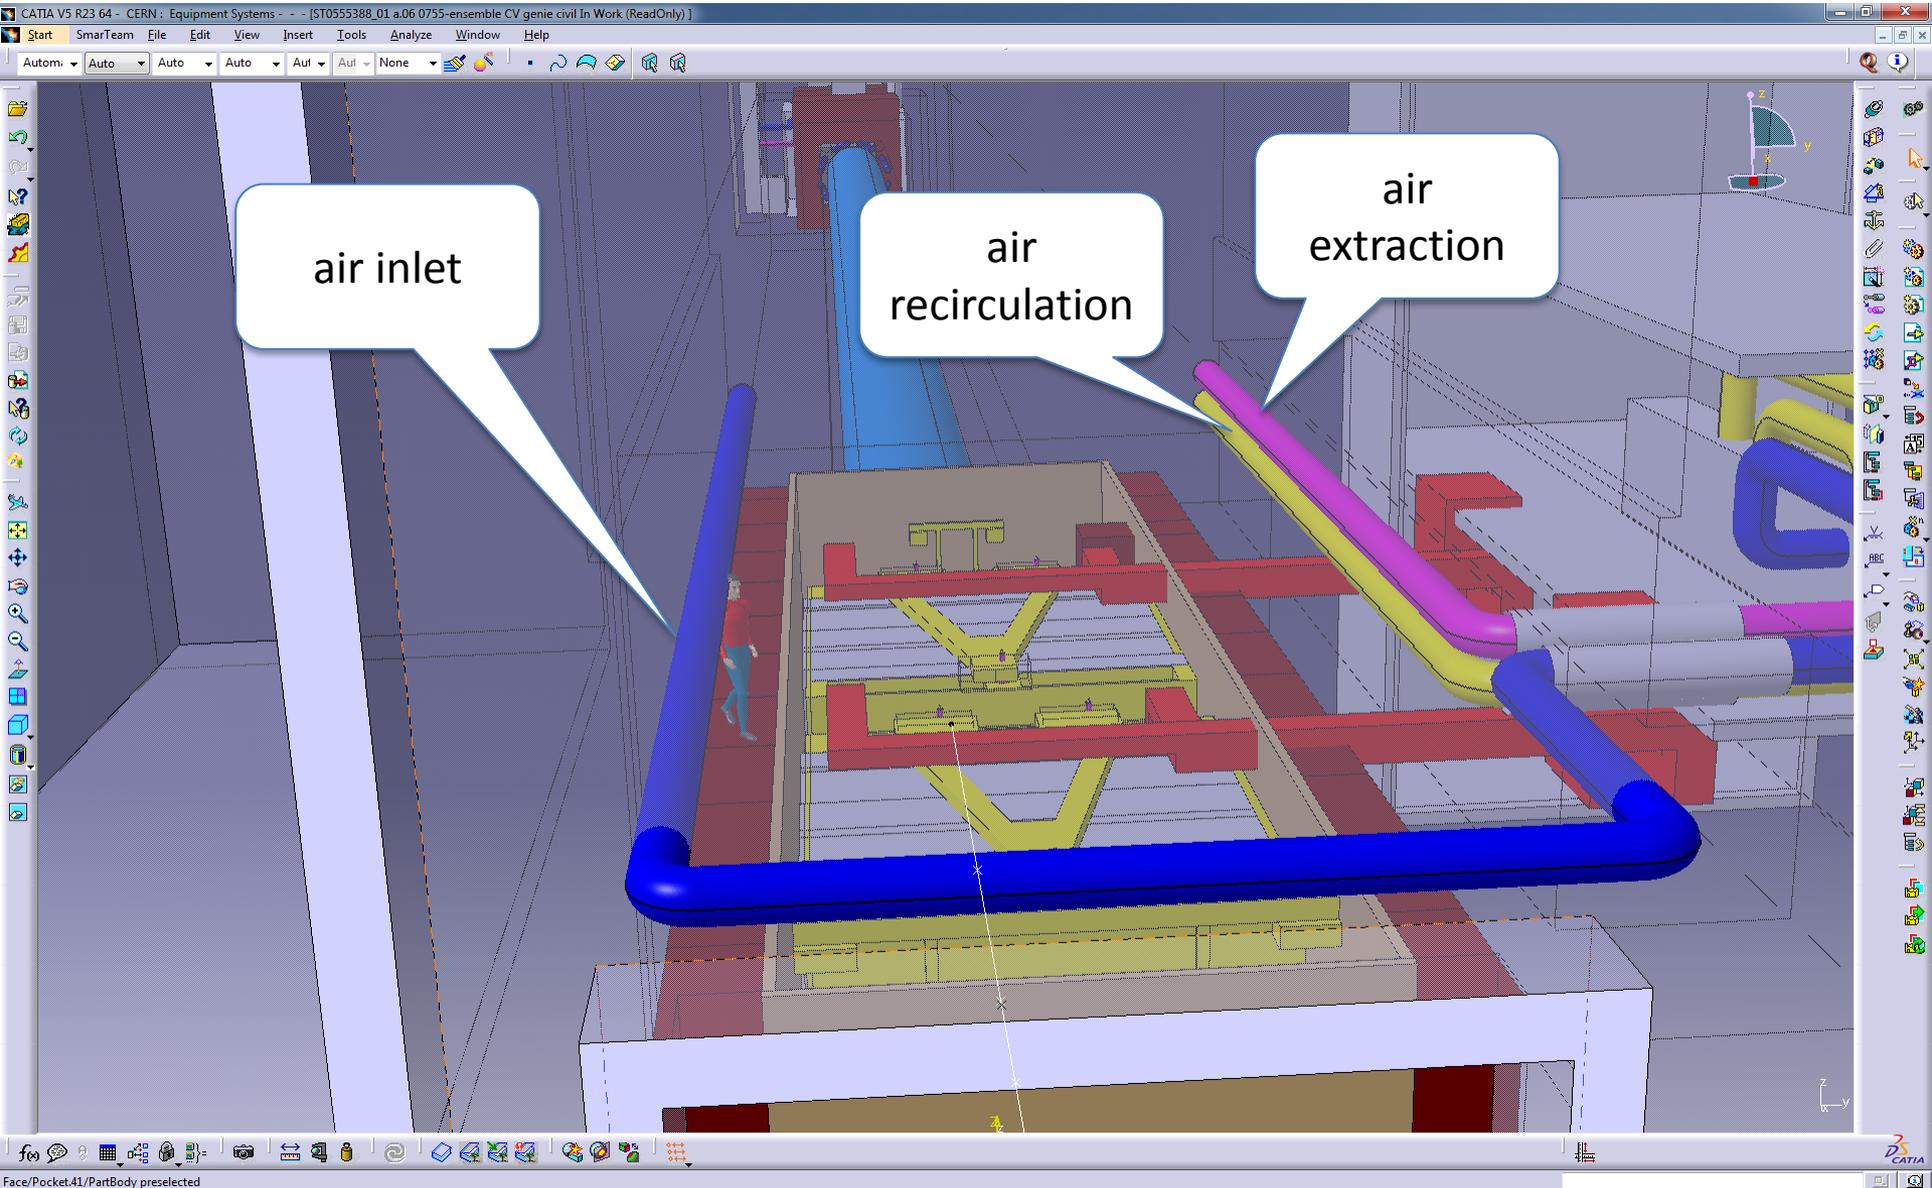

# HVAC integration – Target Hall

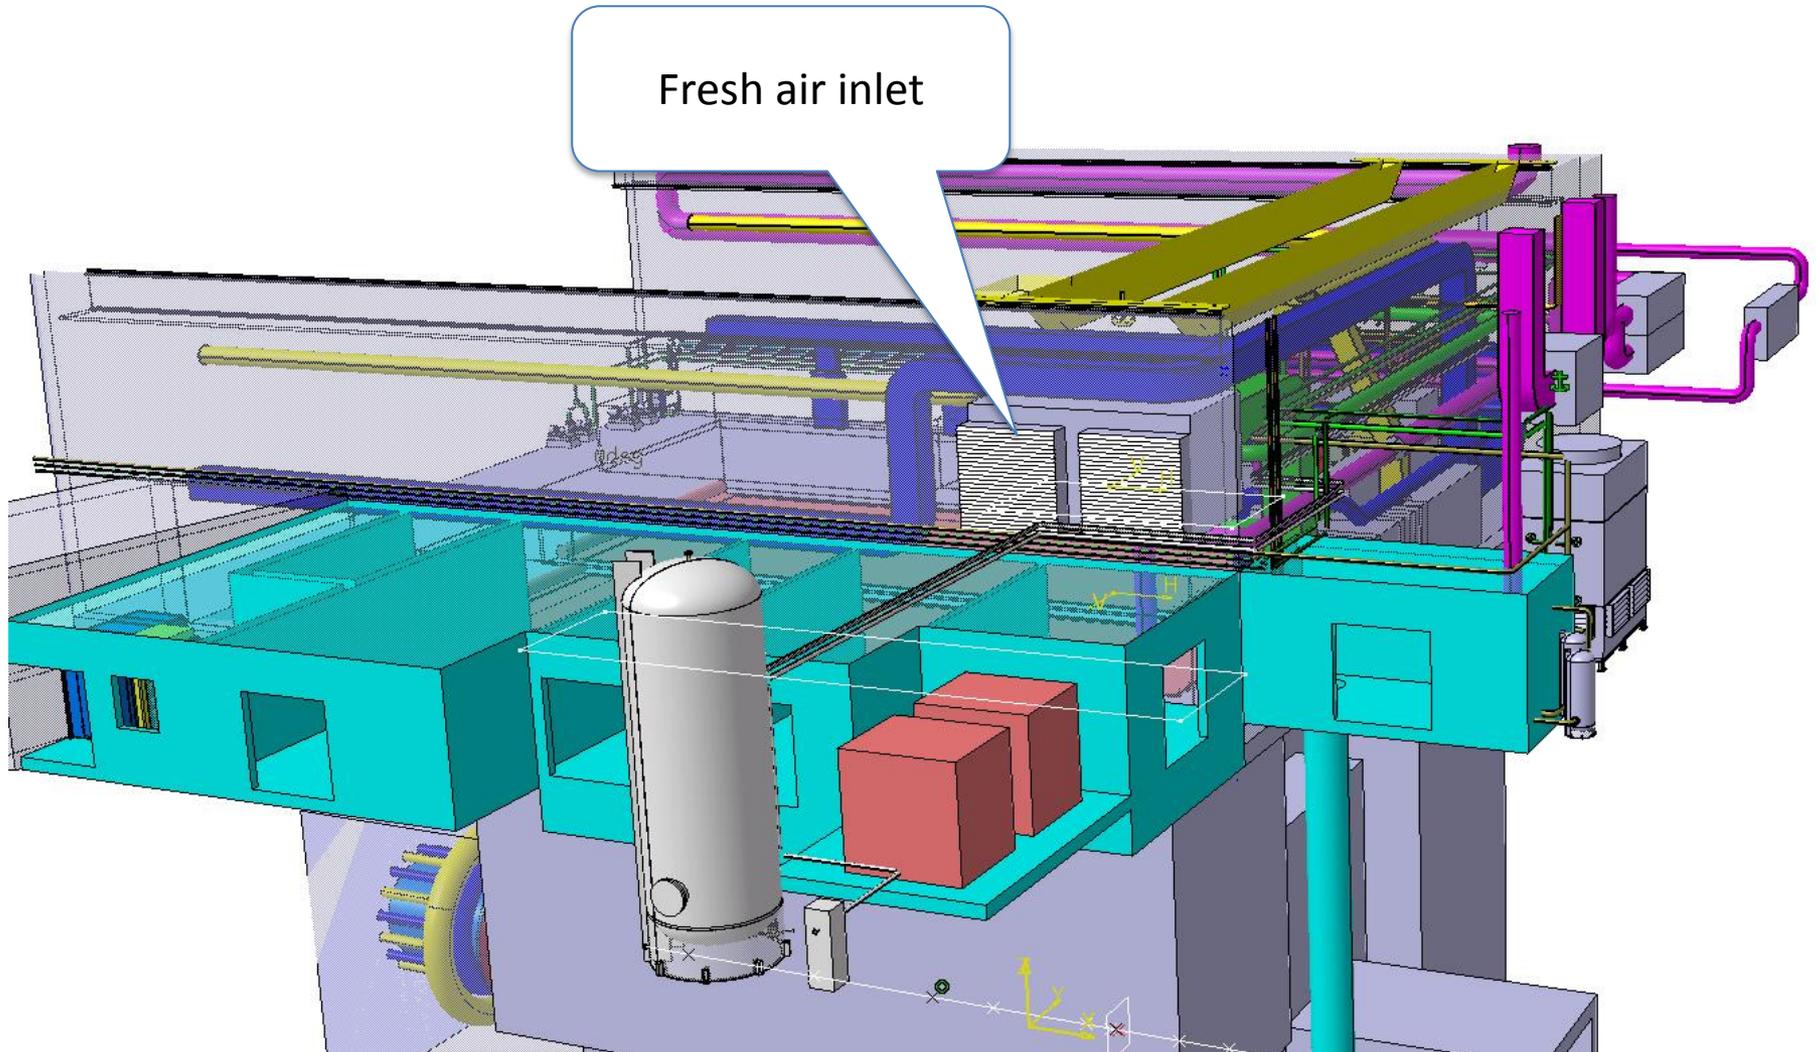

# HVAC int. – Cooling Room

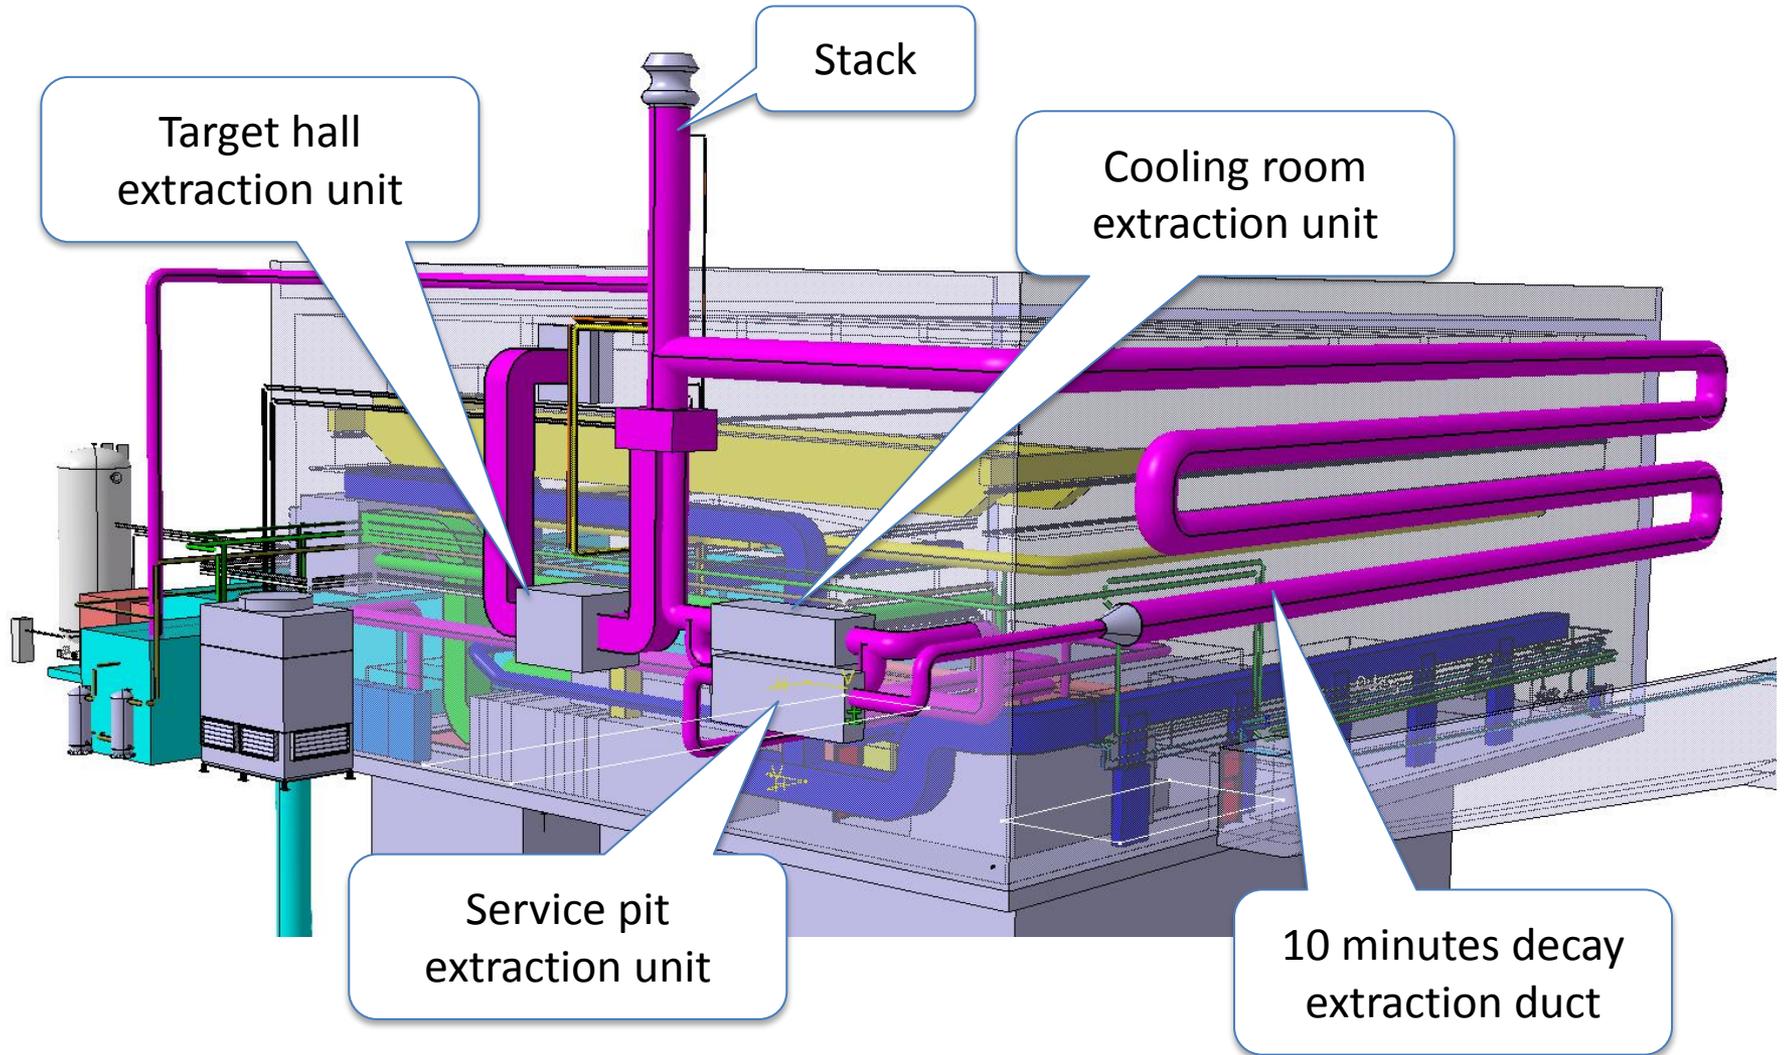

# HVAC int. – Service pit

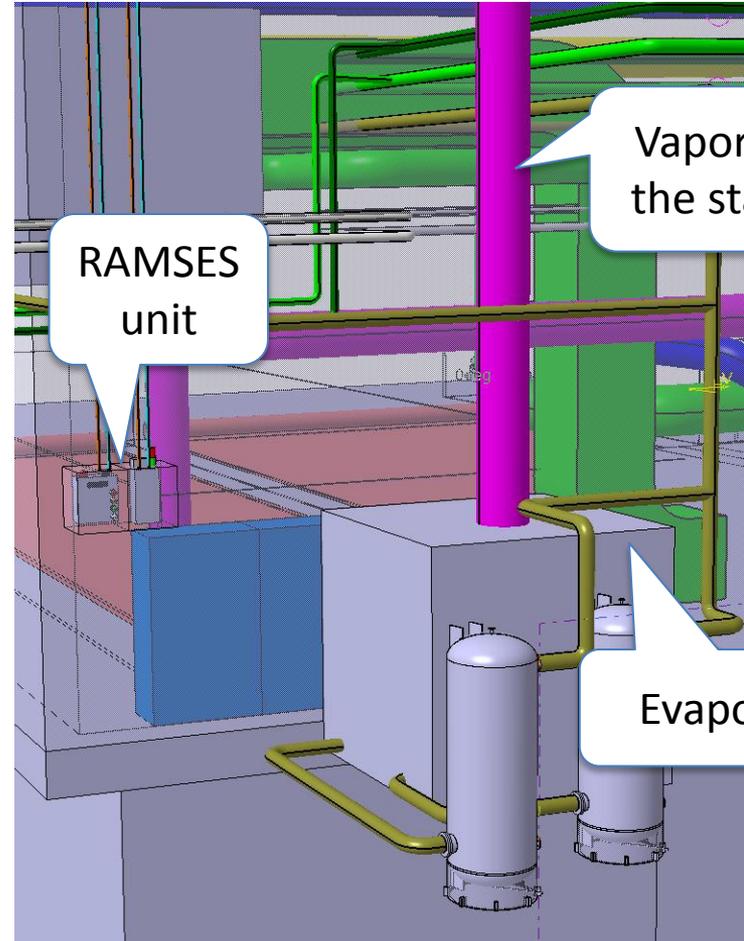

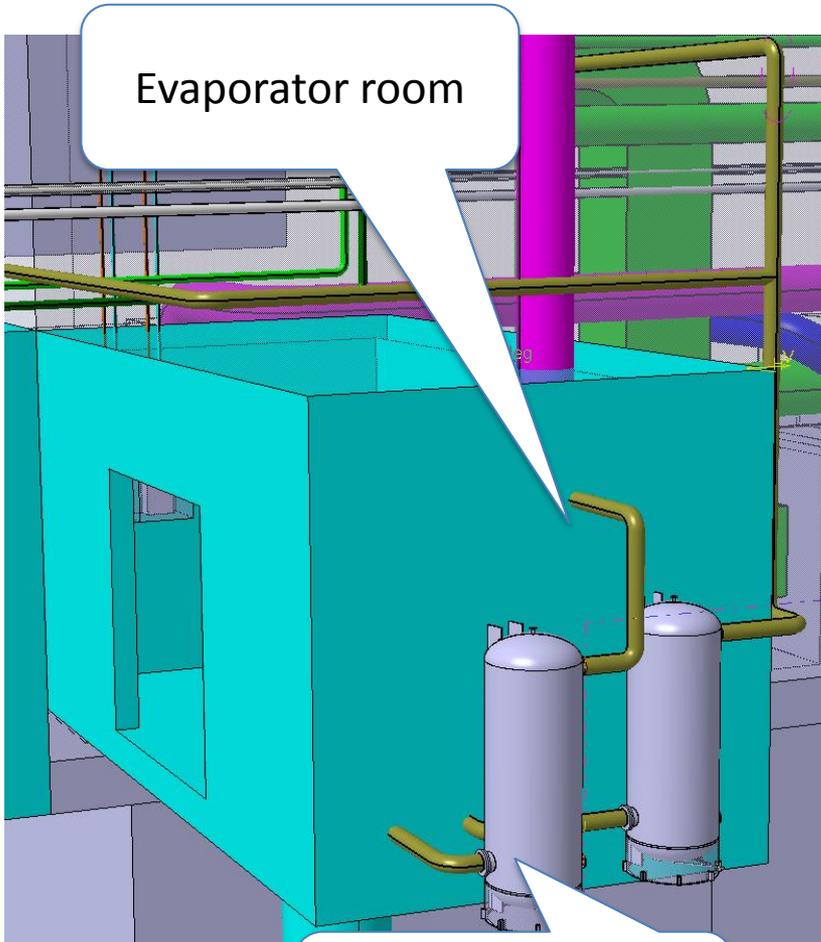

# Fresh air inlet

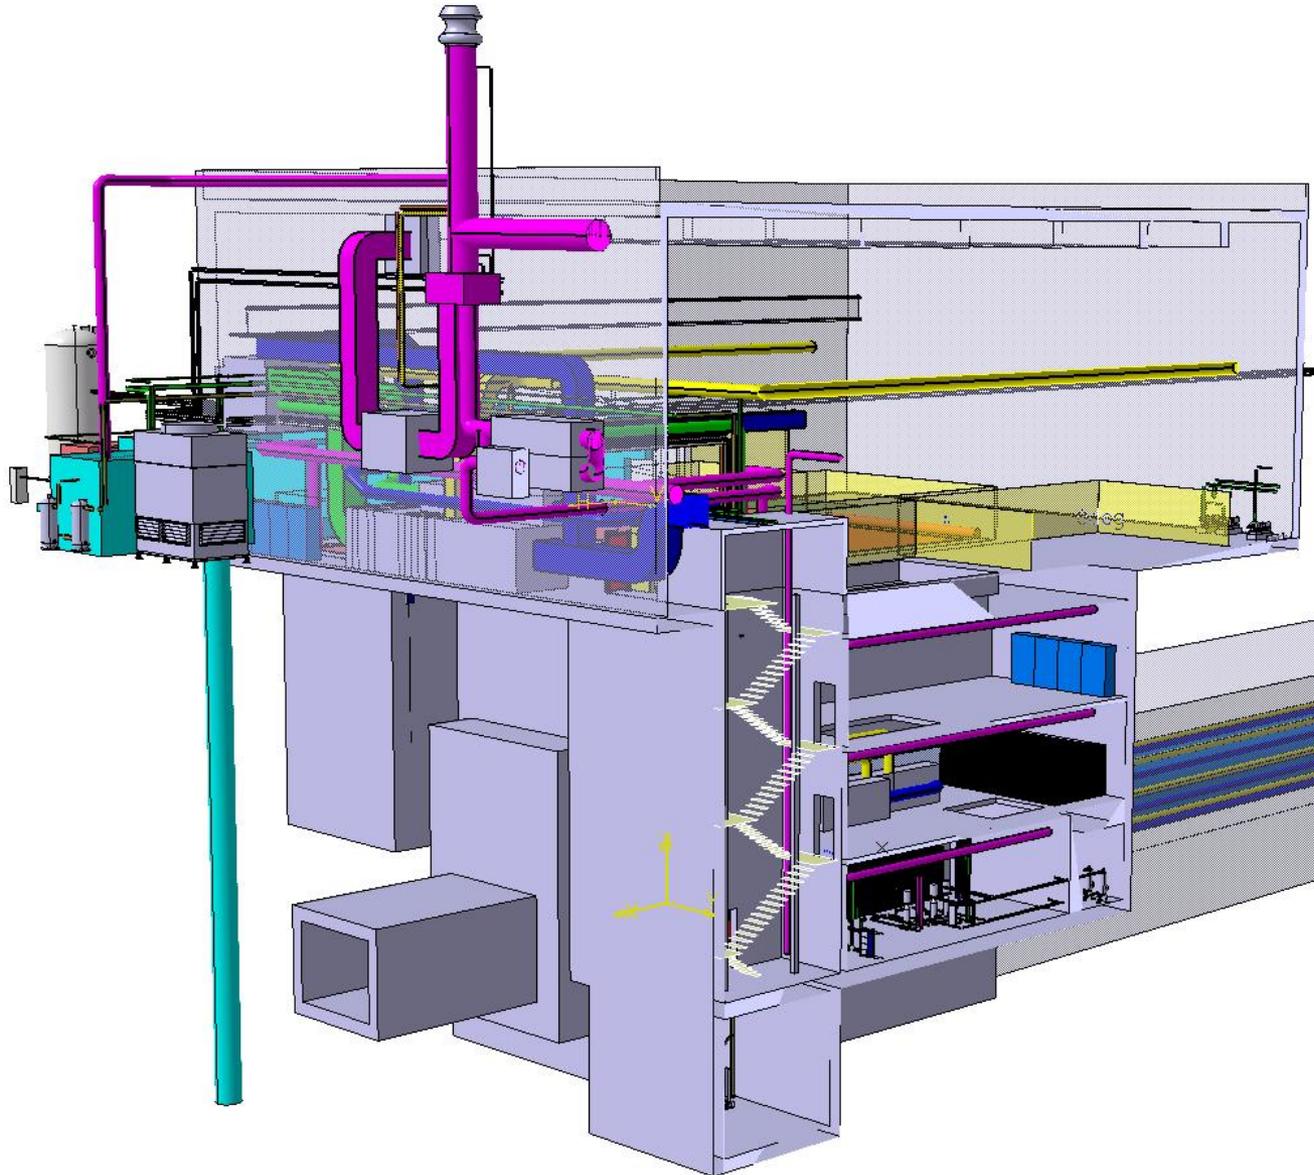

# Air extraction

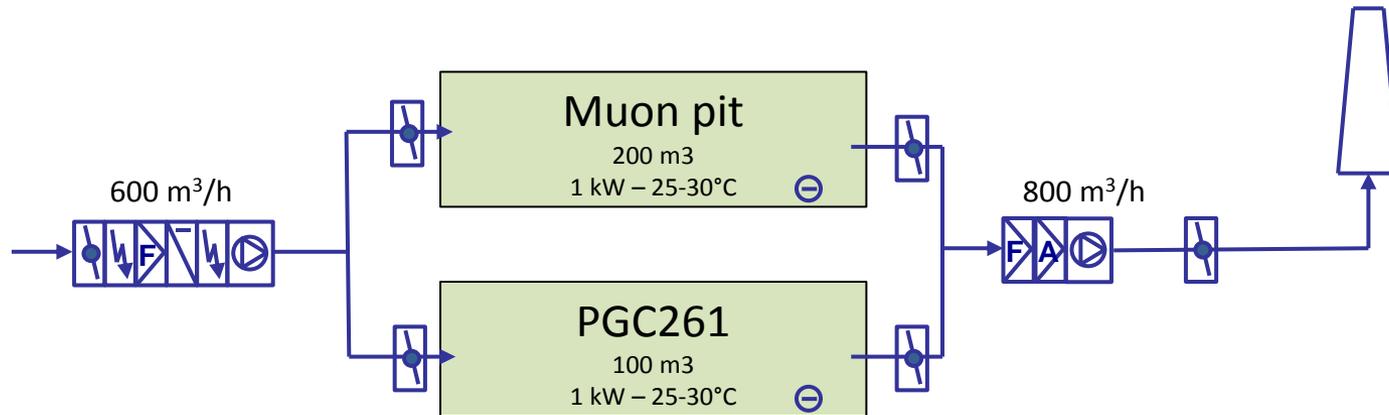

# Evaporators and Radiation Monitoring

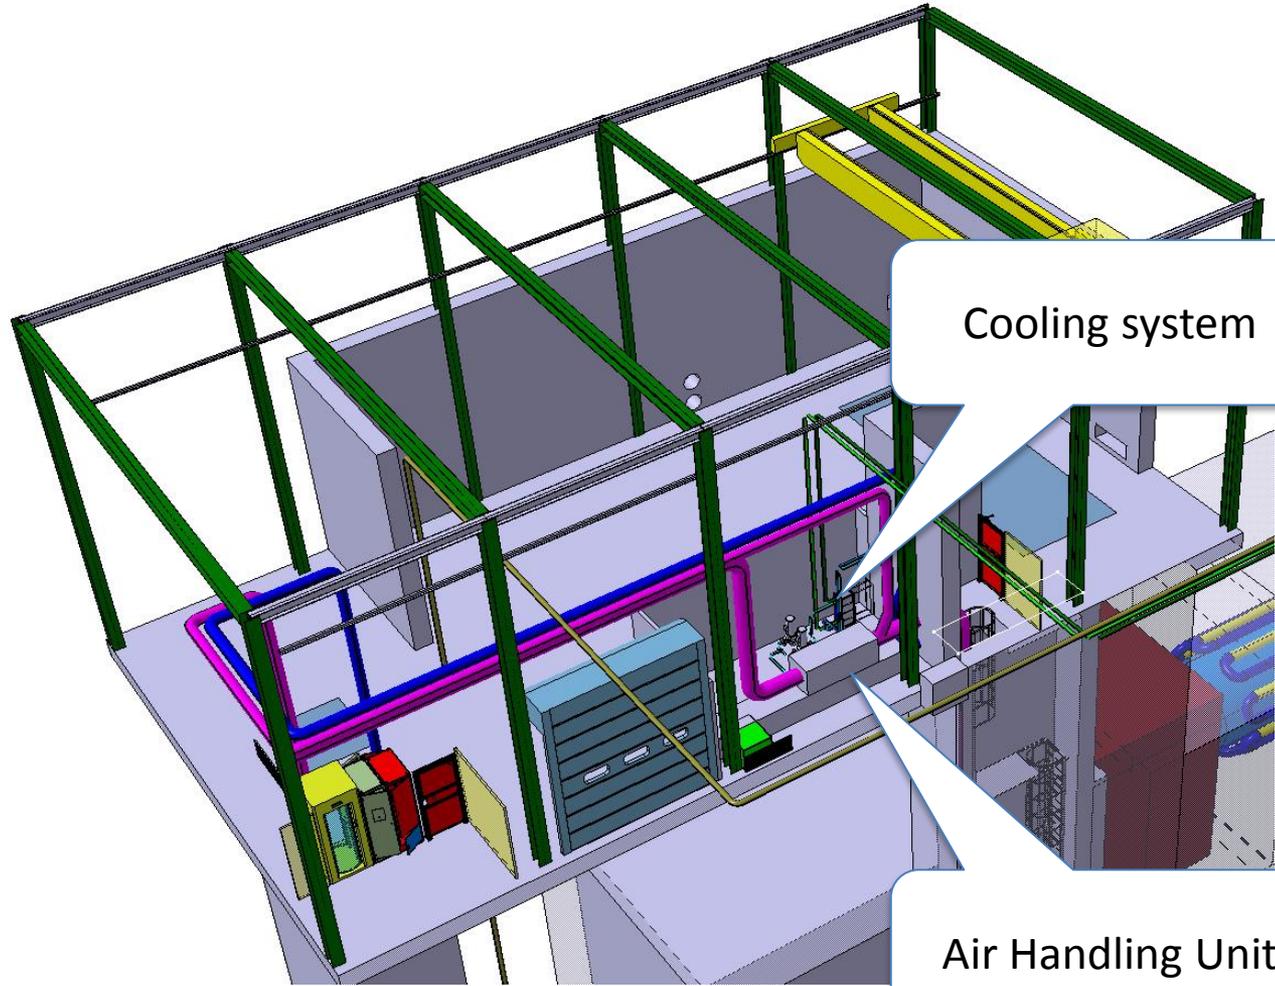

# Overall integration in the area

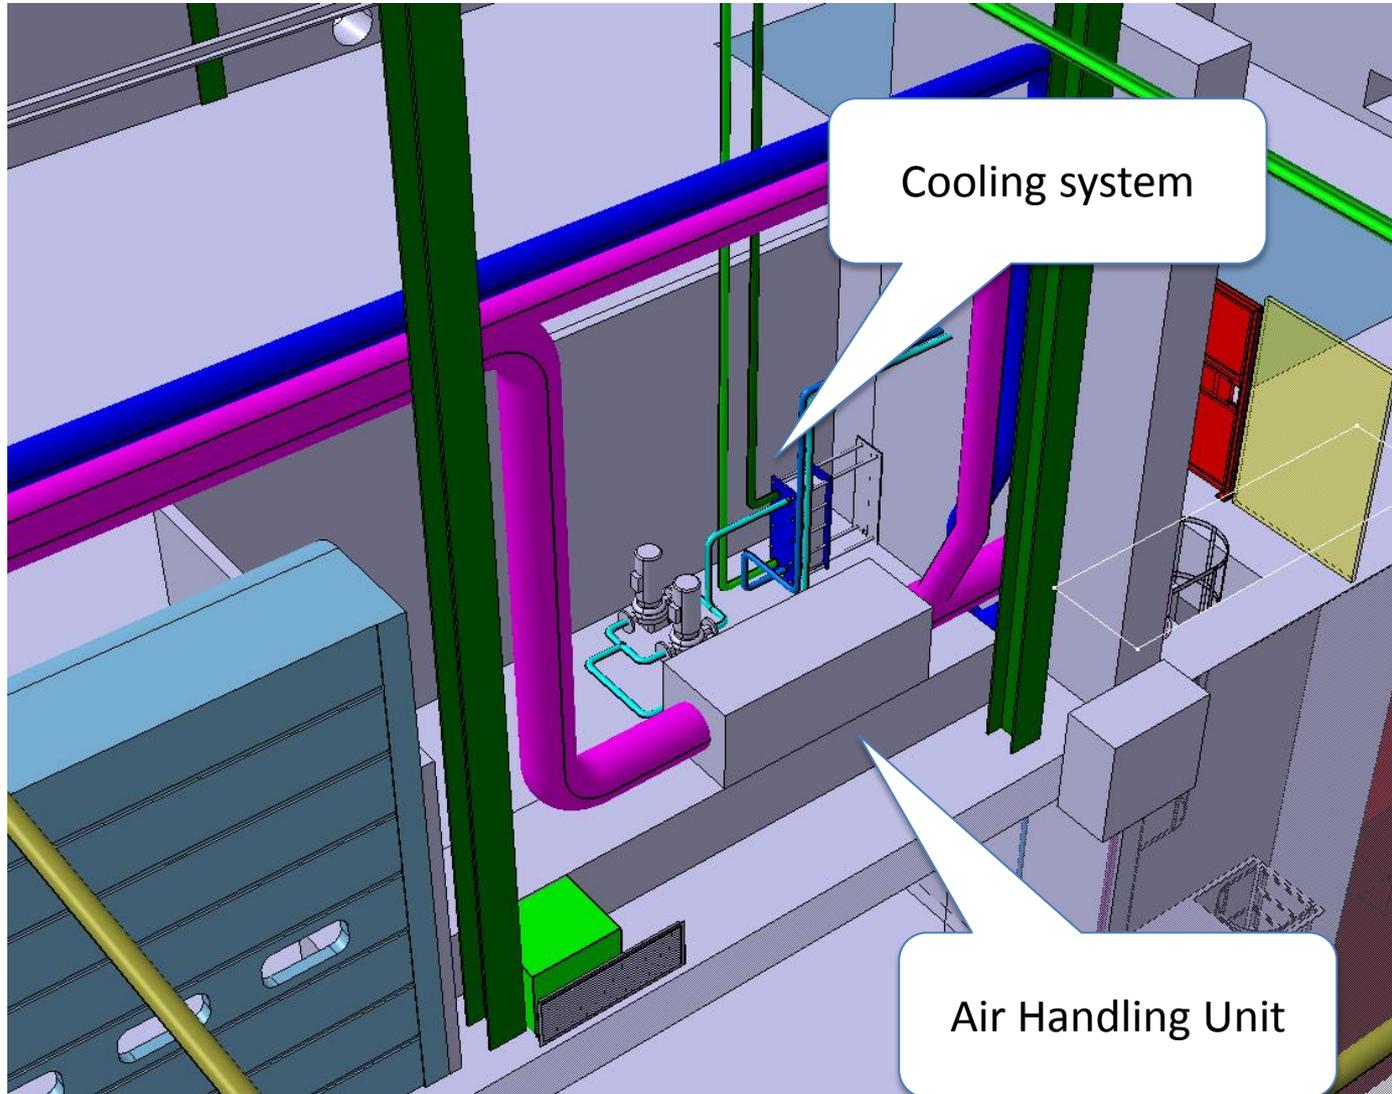

# Ventilation Muon Pits

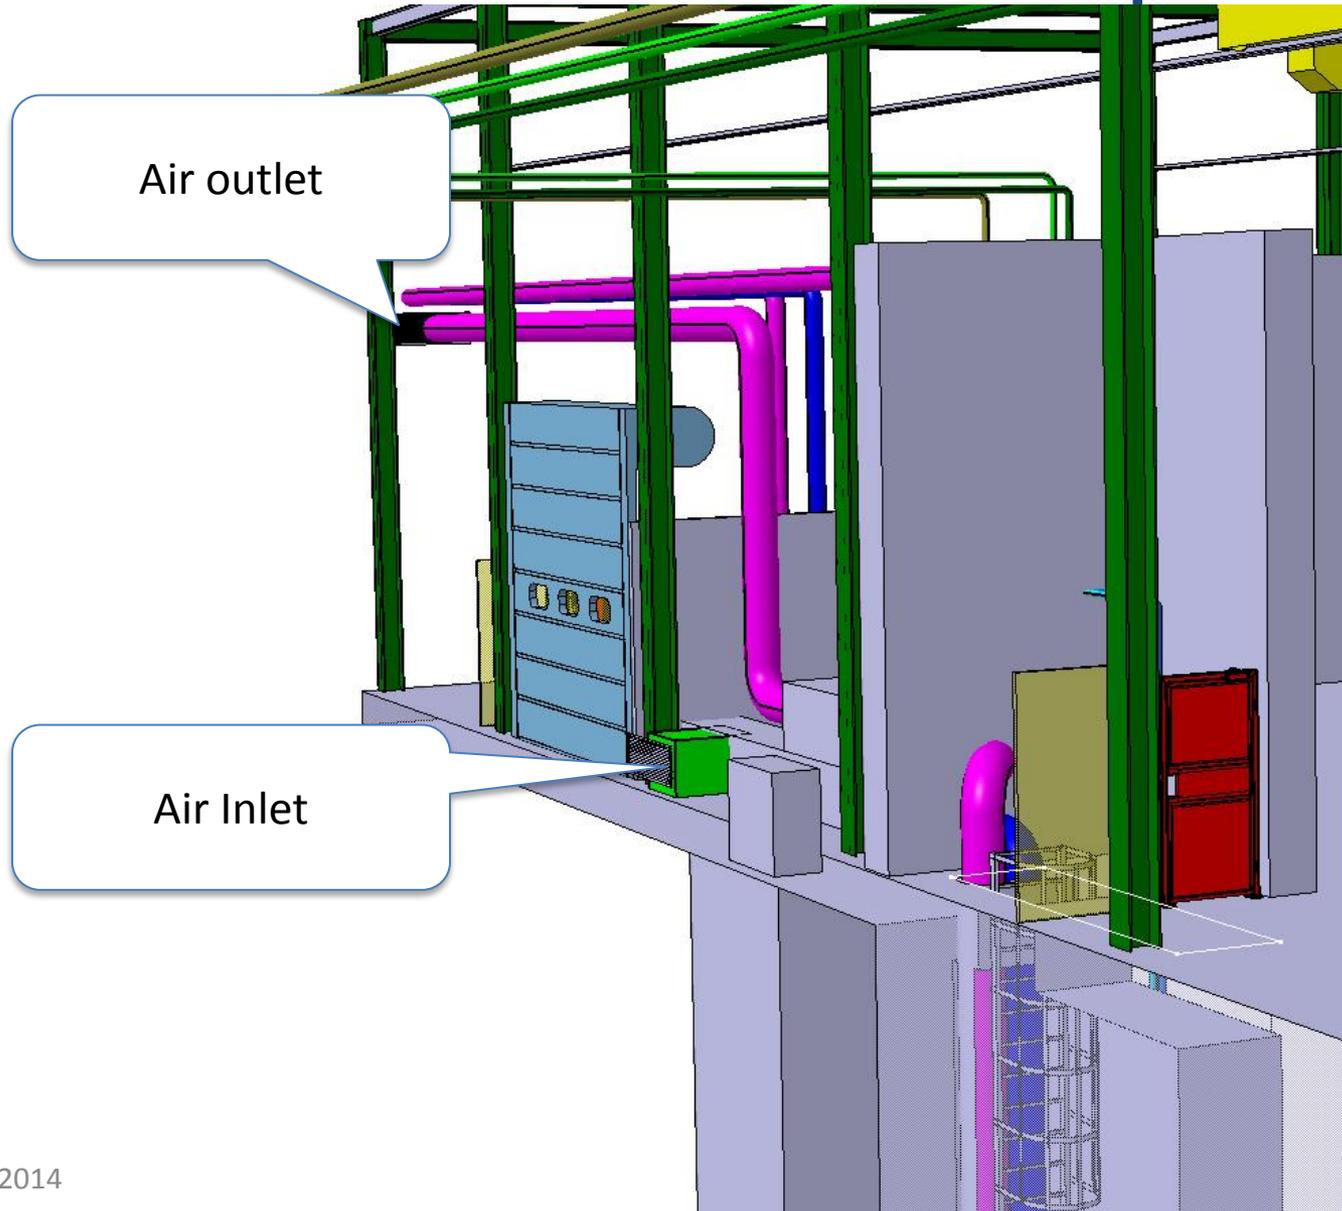

# HVAC int. – Muon pits

# HVAC int. – Muon pits

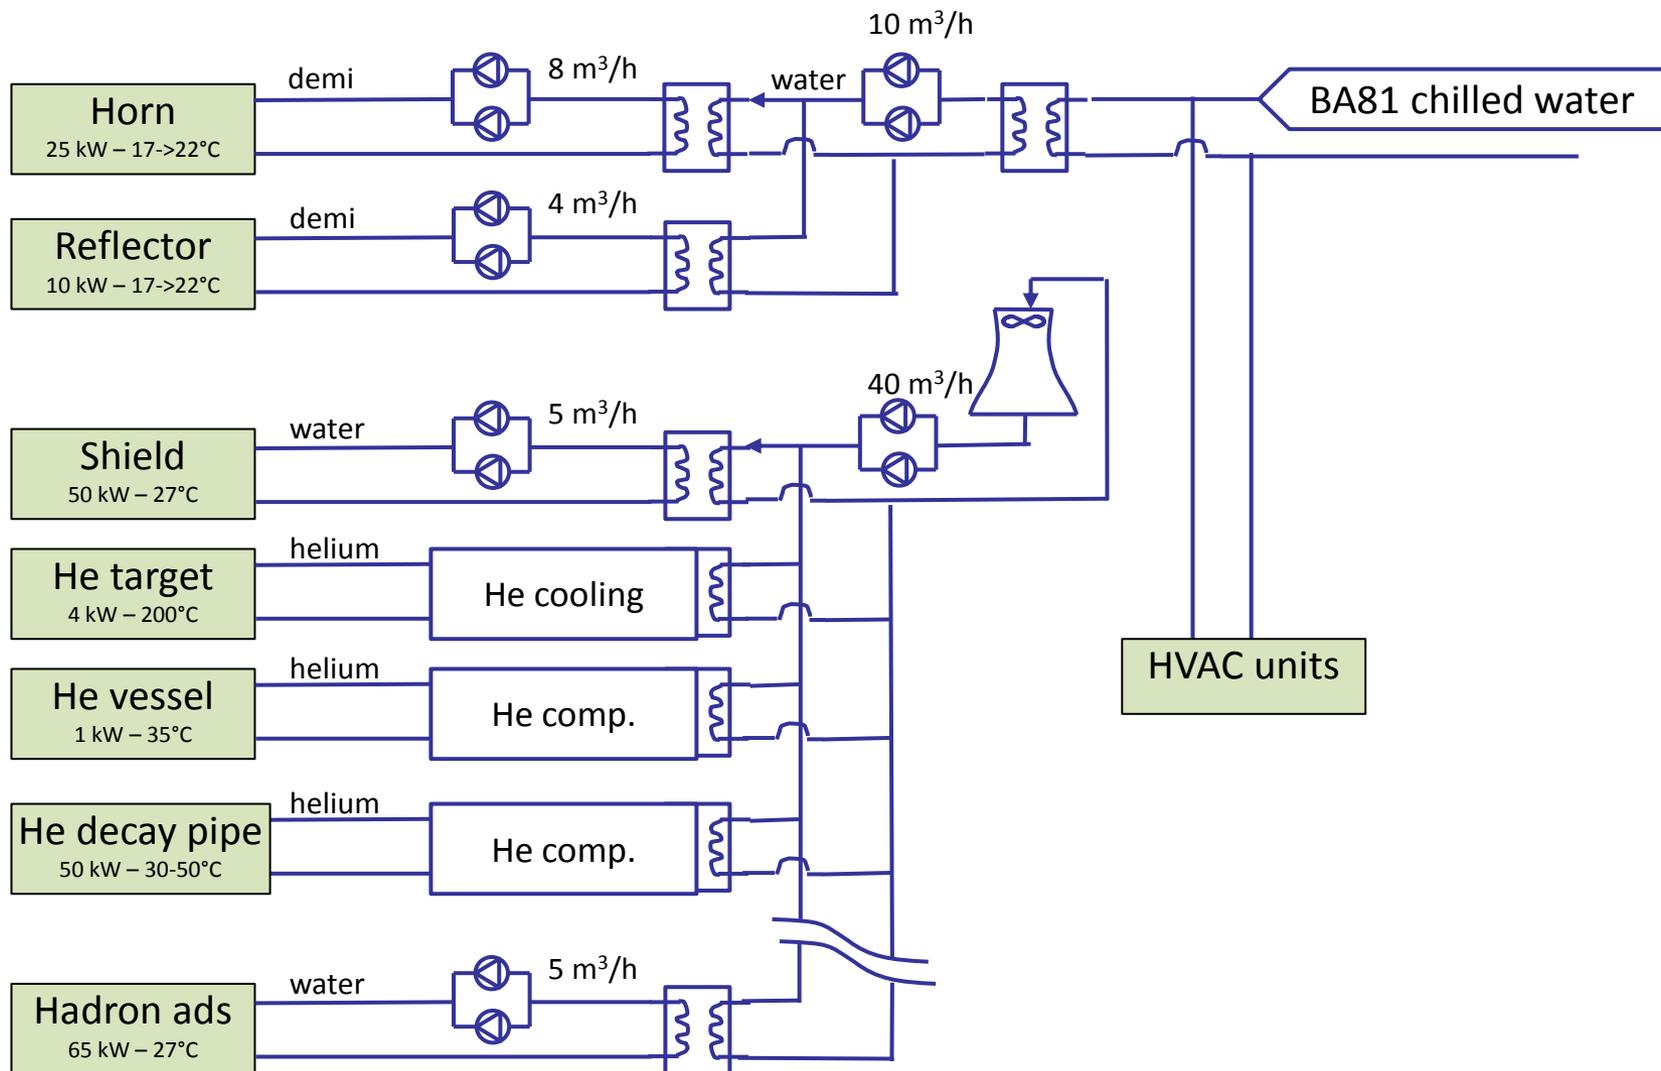

# HVAC int. – Muon pits

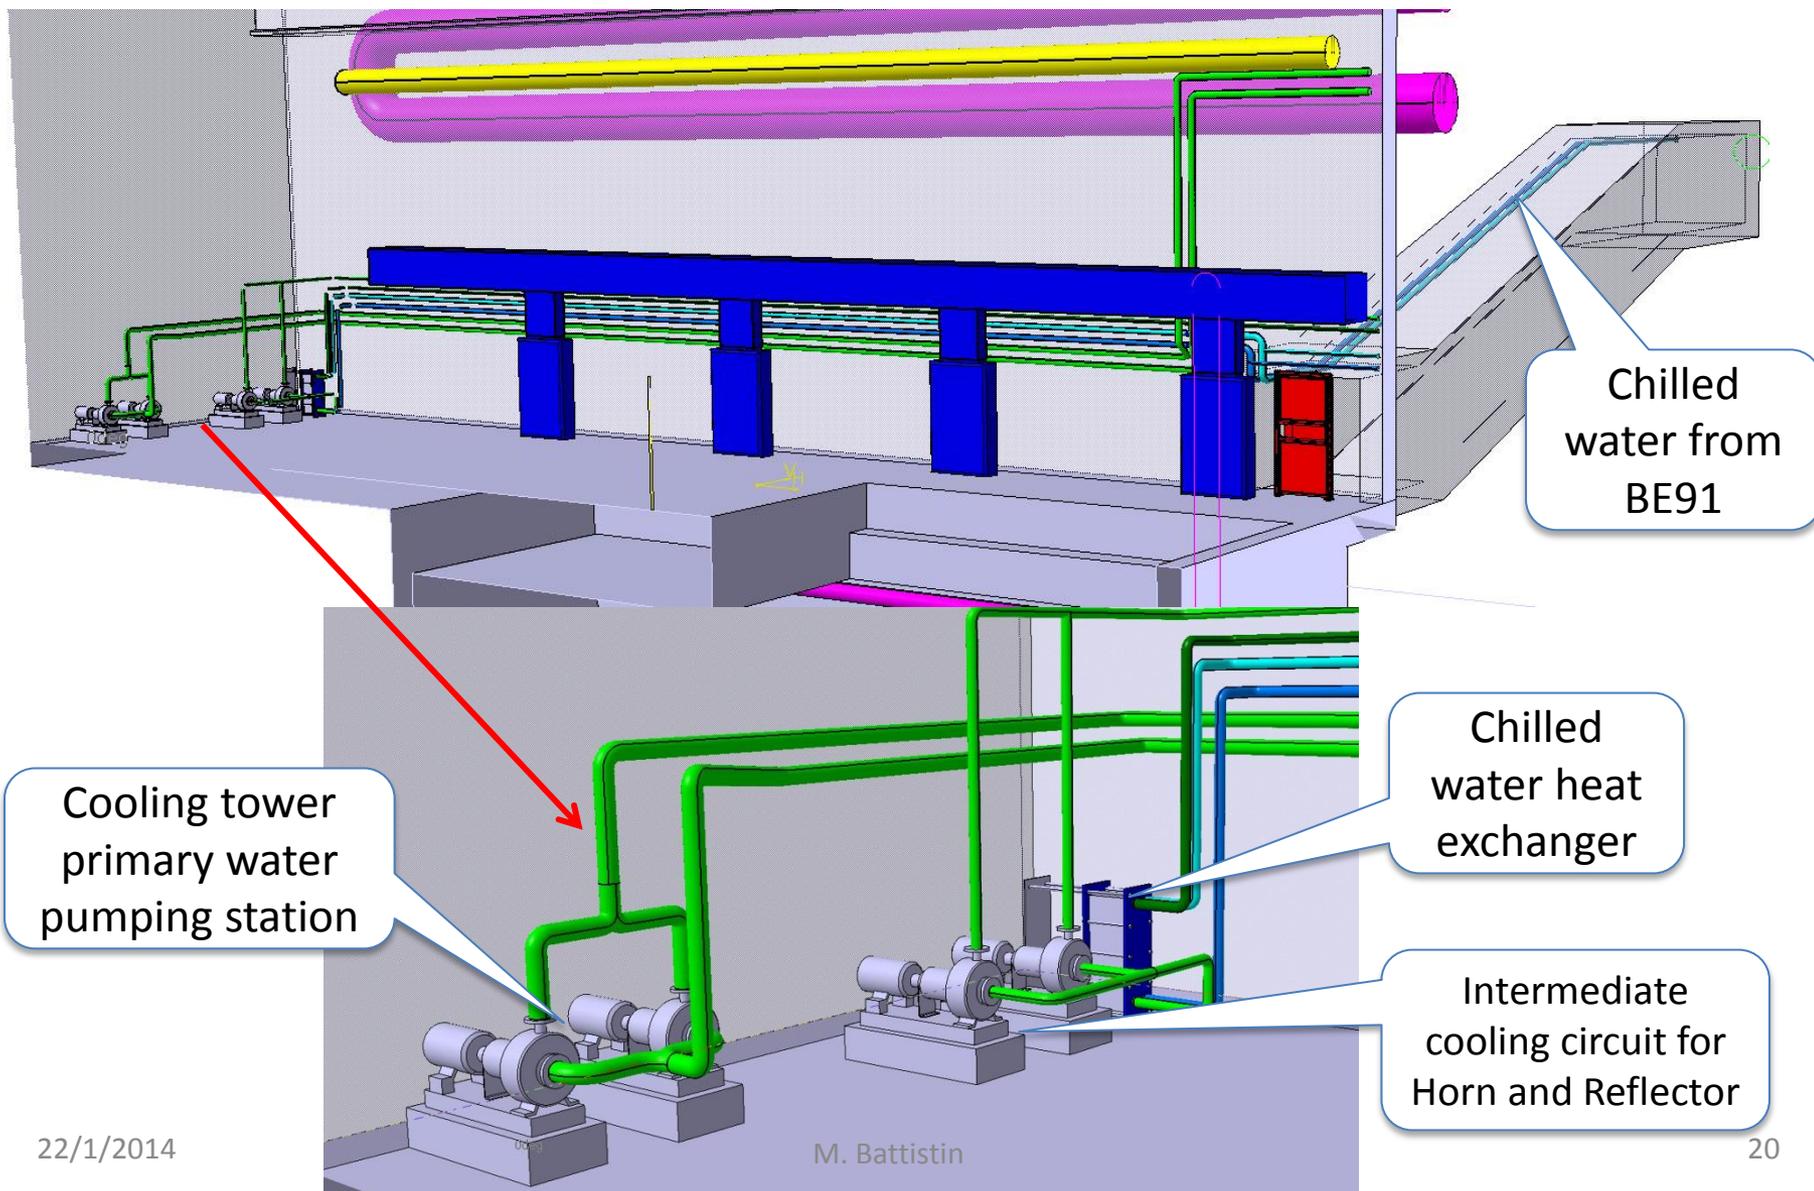

# Hydraulic Integration

- Chilled water for Horn and Reflector cooling + HVAC
- Local primary circuit for all other cooling + helium systems
- Water and helium secondary circuits

# Cooling P&ID

# Chilled water supply in target hall

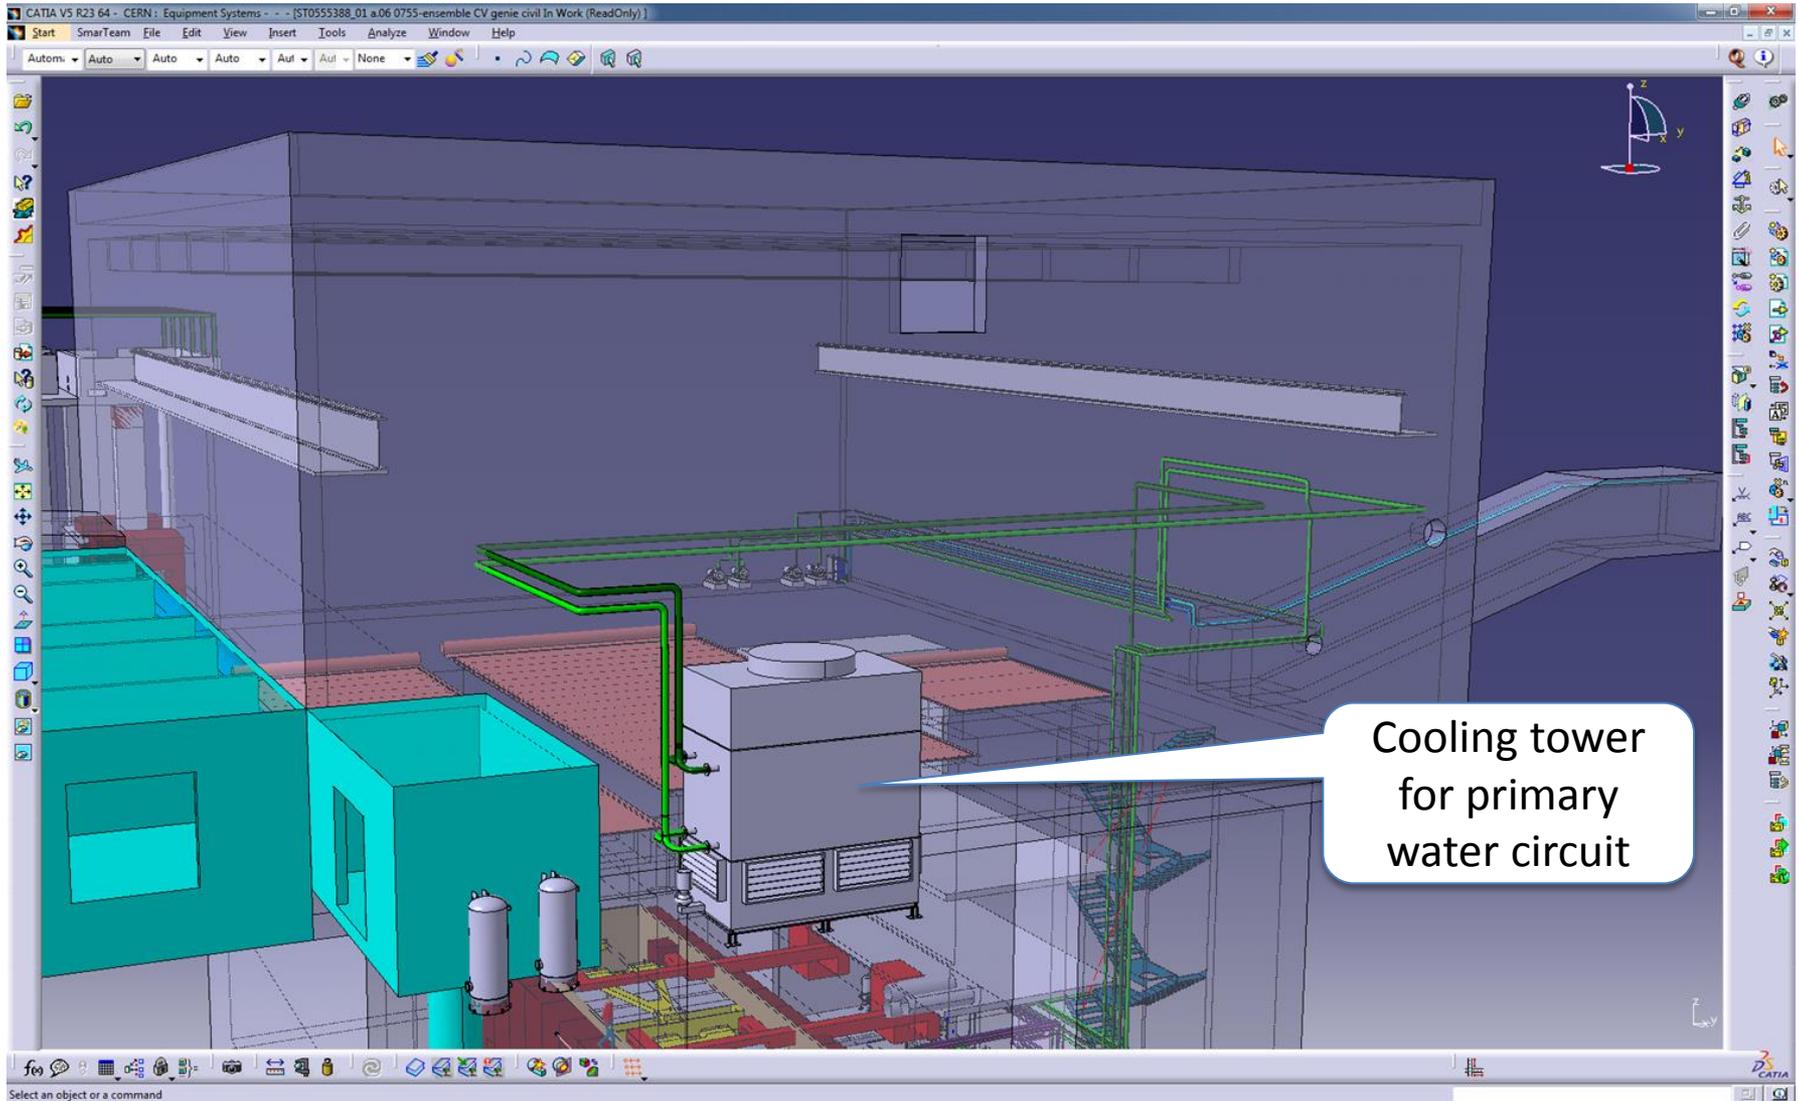

Chilled water from BE91

Chilled water heat exchanger

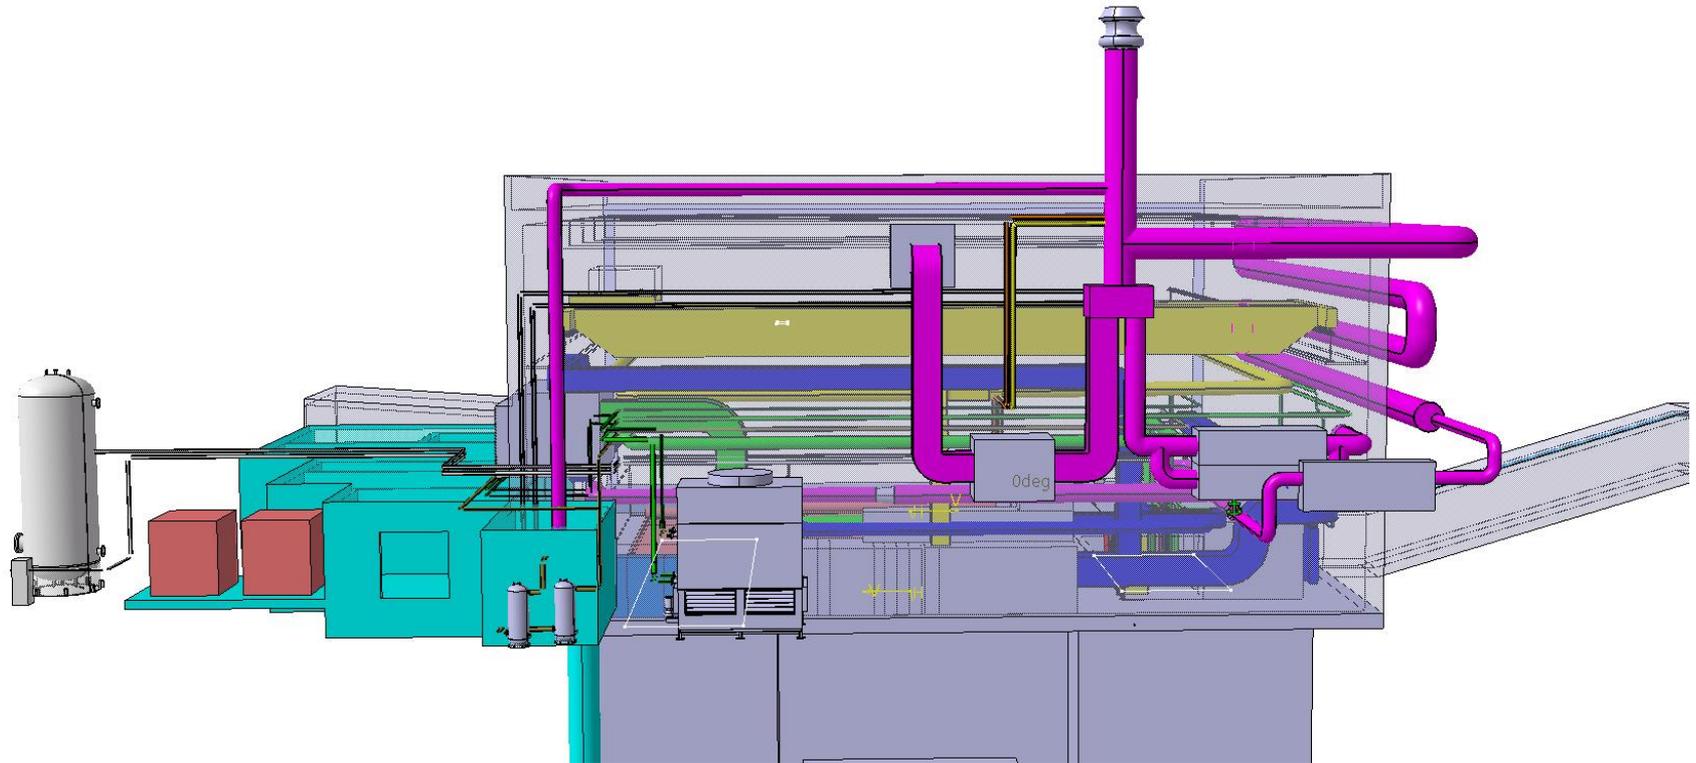

Intermediate cooling circuit for Horn and Reflector

Cooling tower primary water pumping station

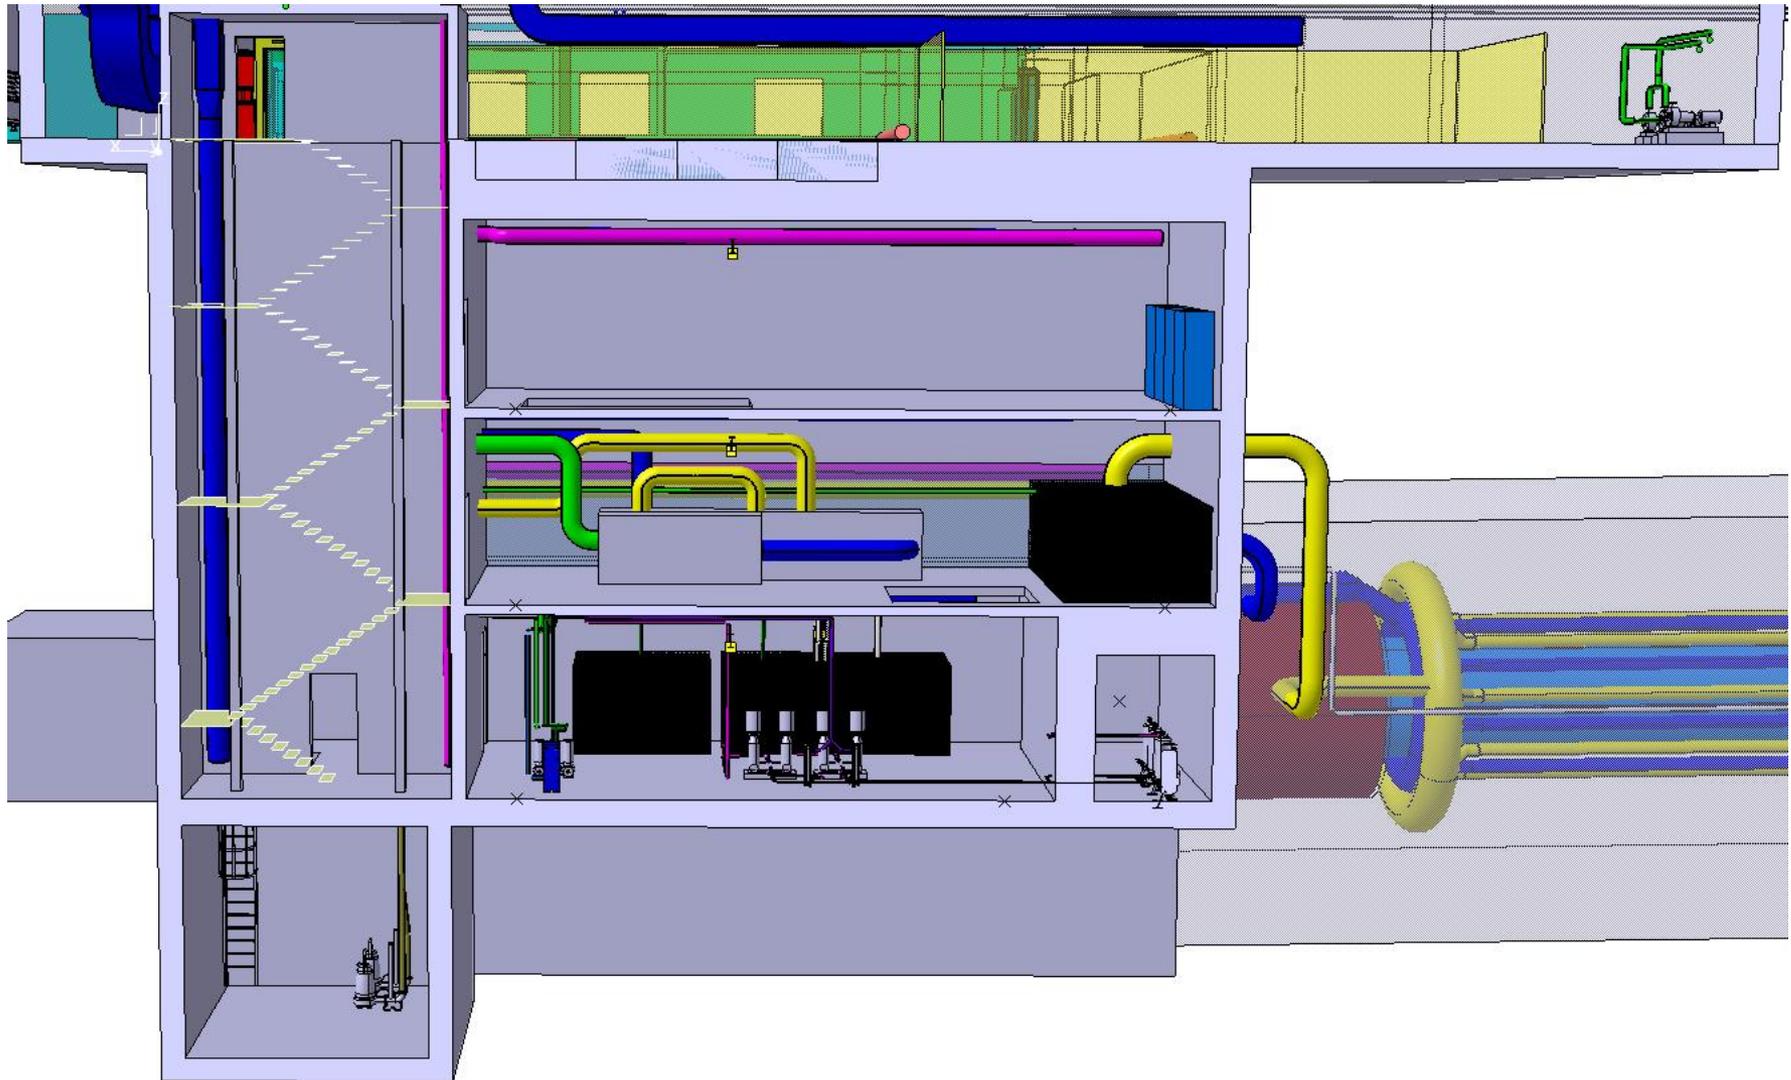

# Cooling tower

# Outside integration

# Cooling room general integration

# Cooling circuits in the cooling room

Shield + 2xHelium  
cooling: 27-> °C

Helium Vessel  
Conditioning  
With cryo trap

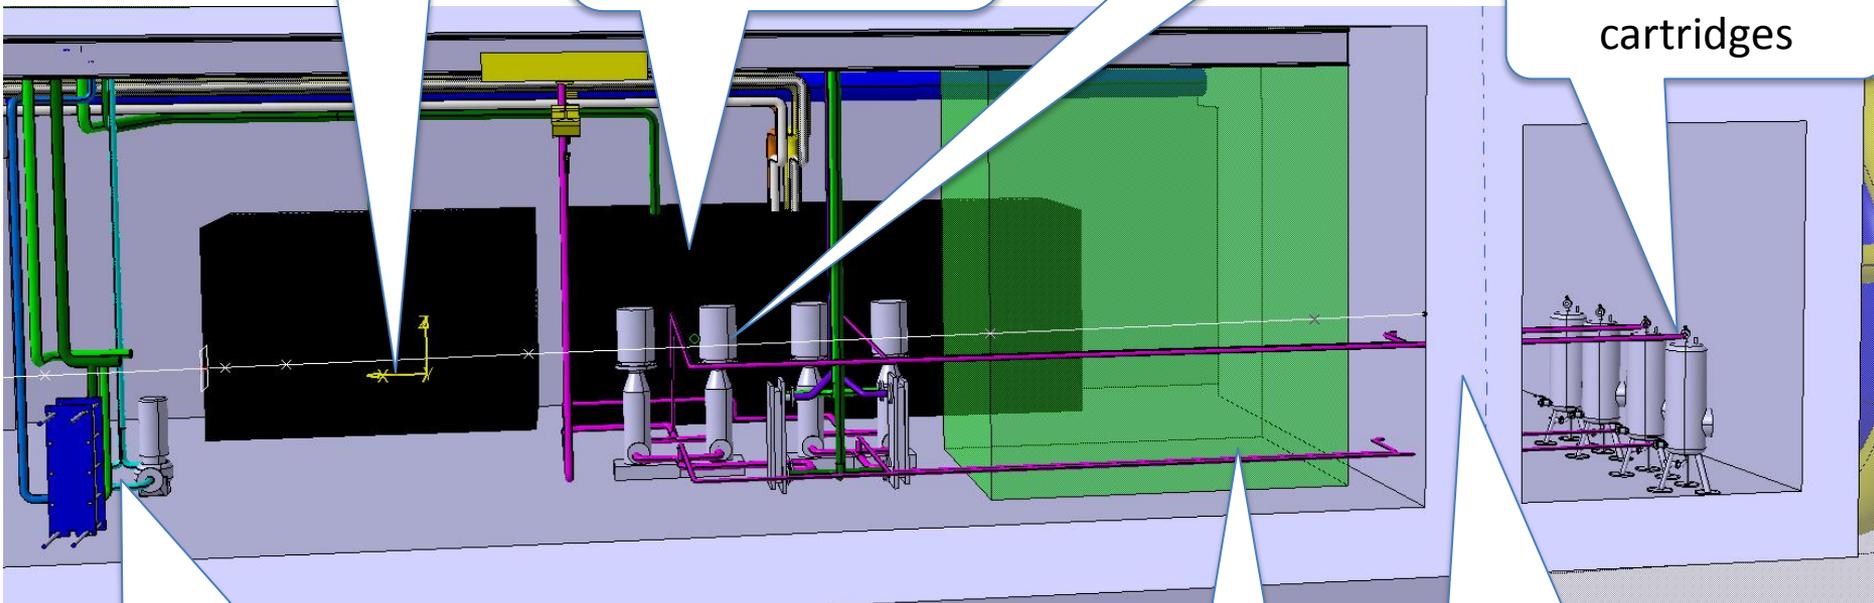

Horn & Reflector  
Cooling: 17-22 °C

Demineral  
cartridges

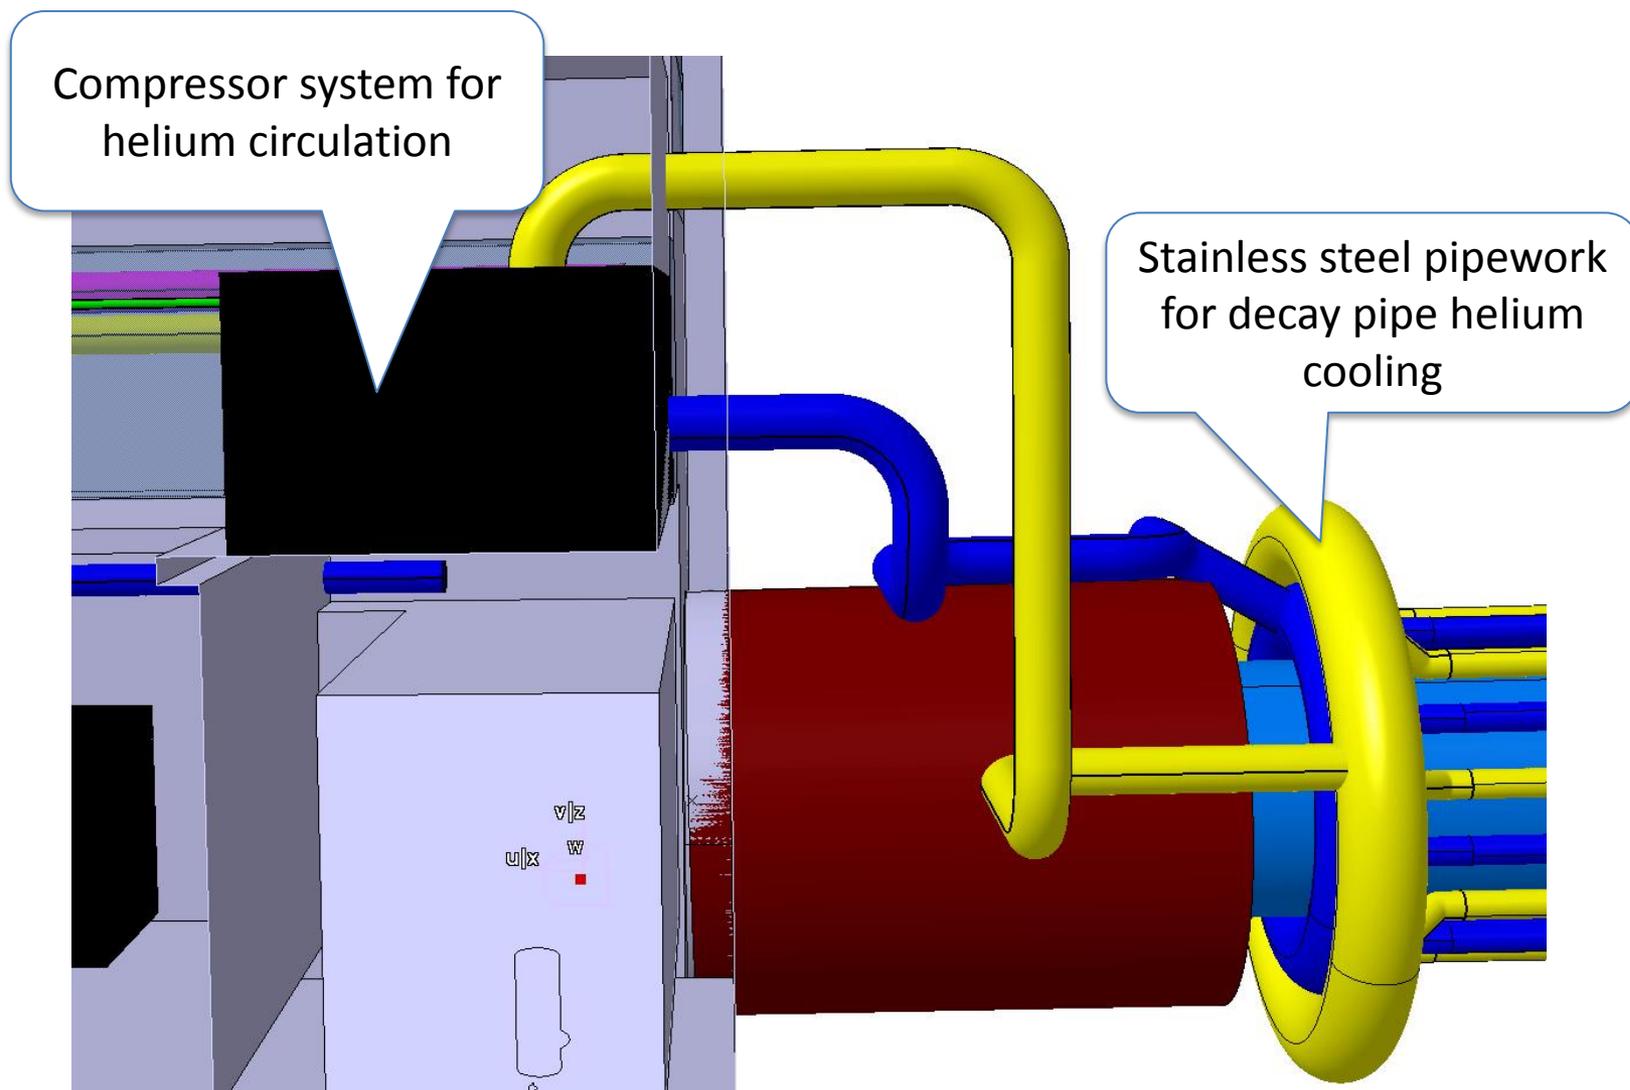

Helium Target Cooling

Transport  
volume

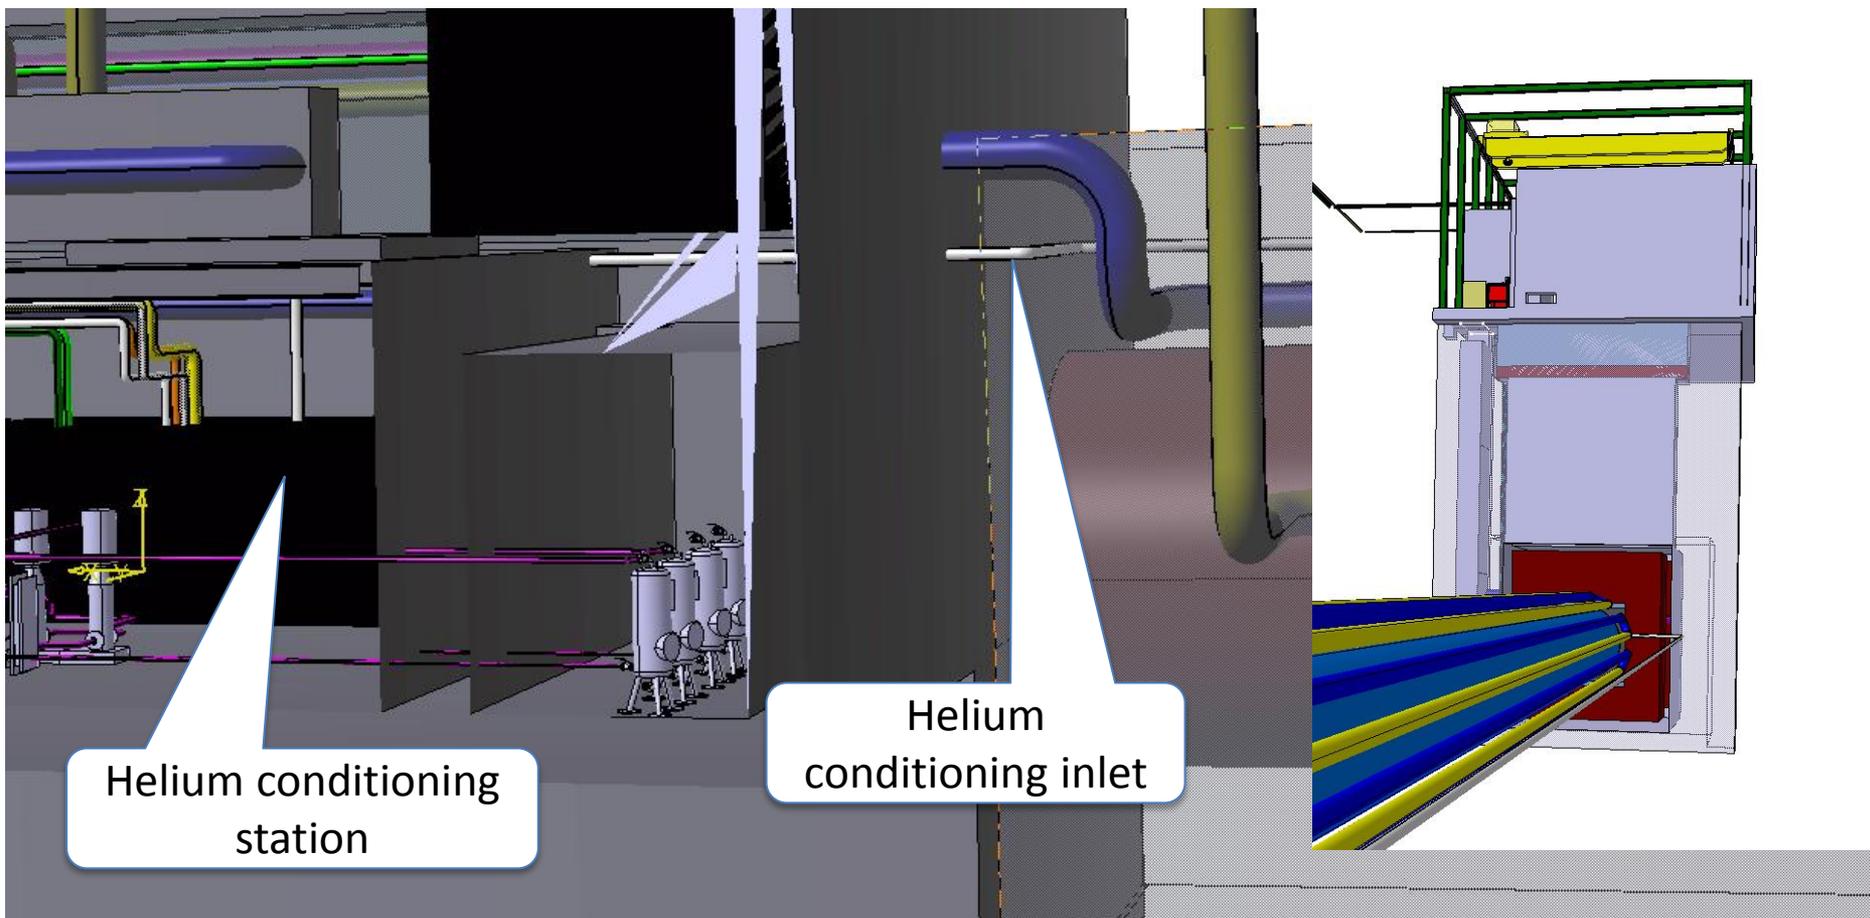

80 cm concrete wall to  
shield the demineral  
cartridges

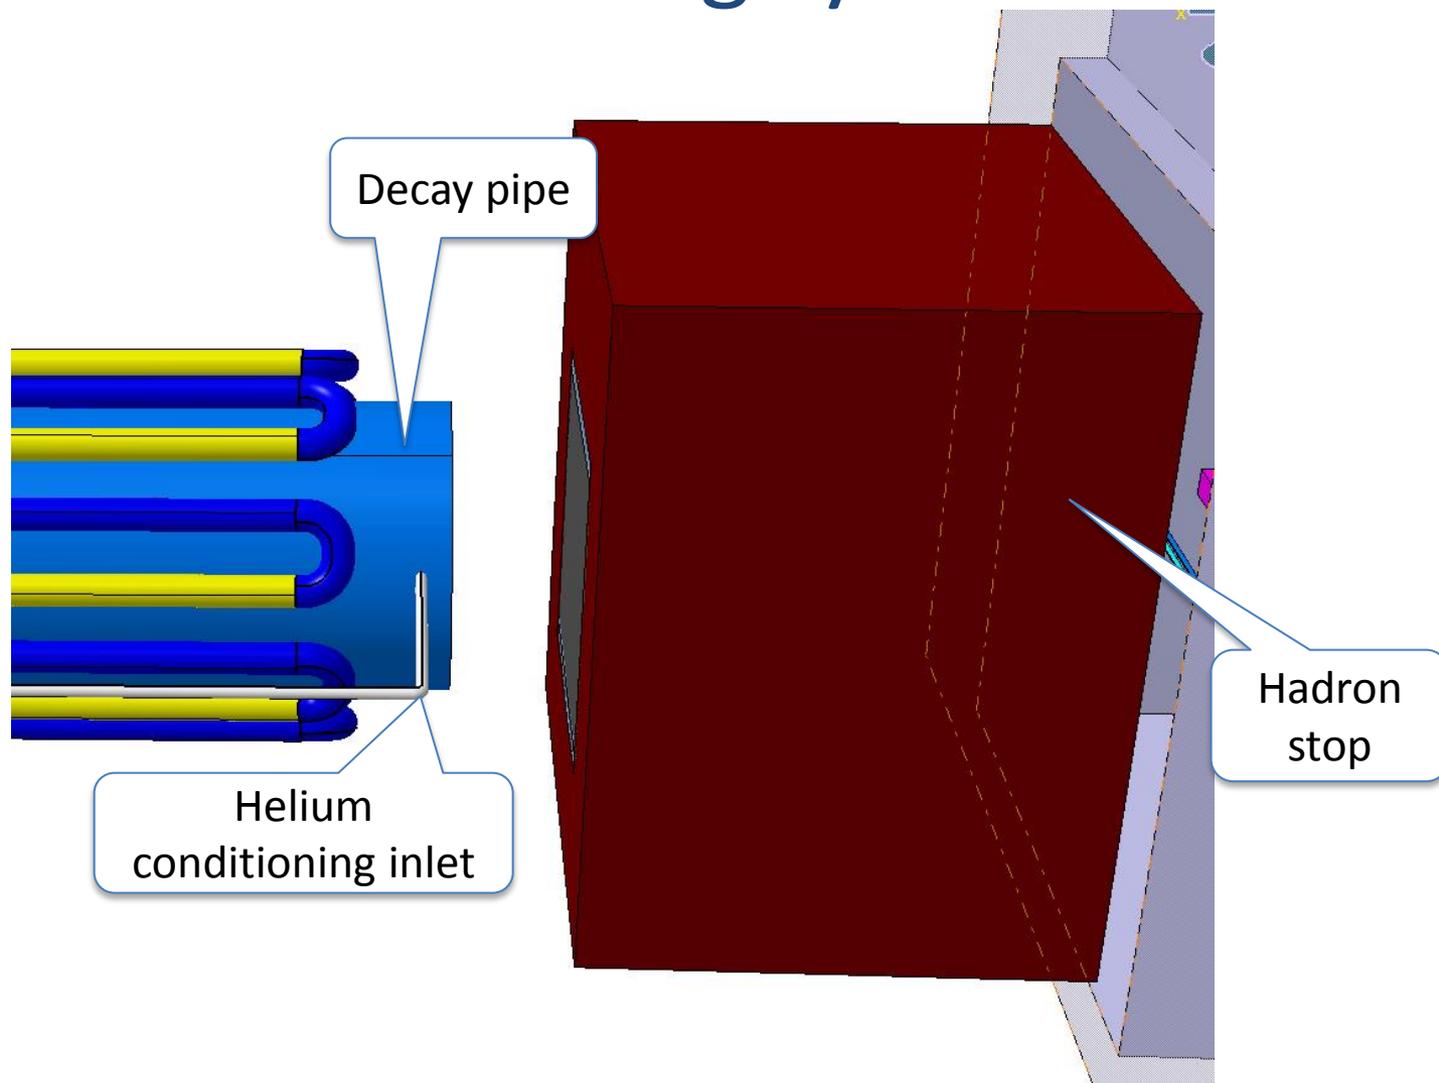

# Decay pipe helium cooling

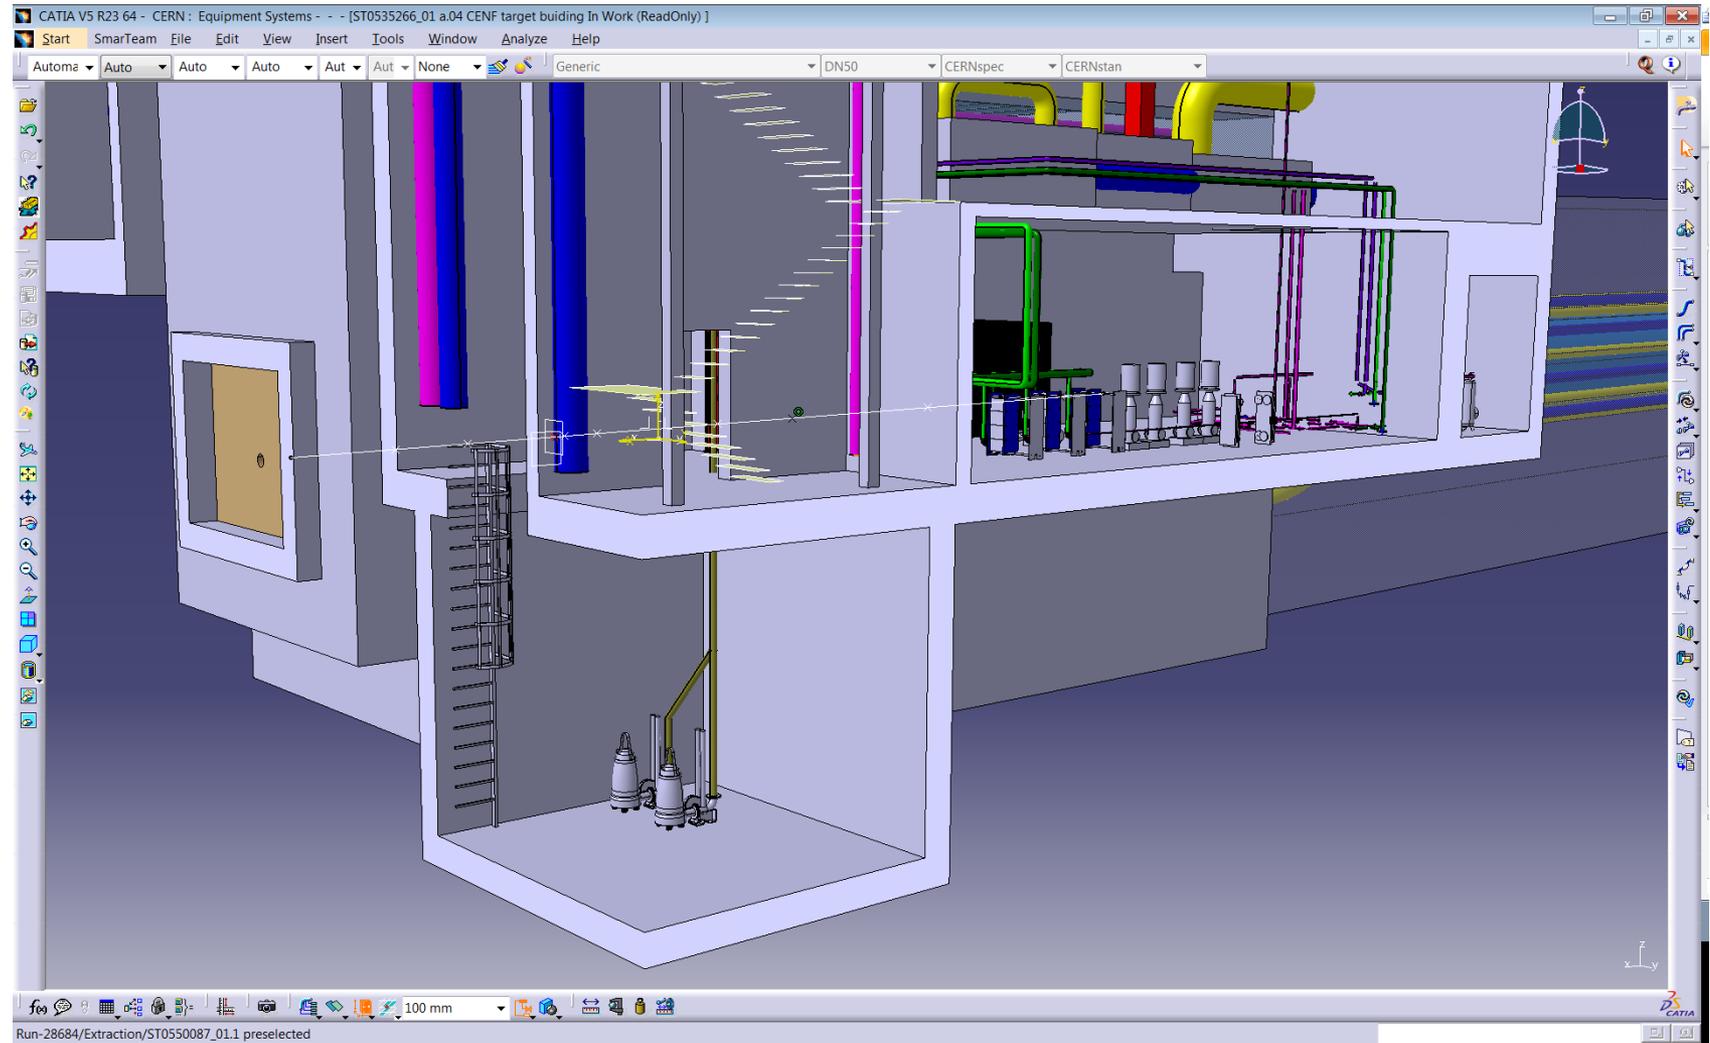

# Decay pipe and vessel helium conditioning system

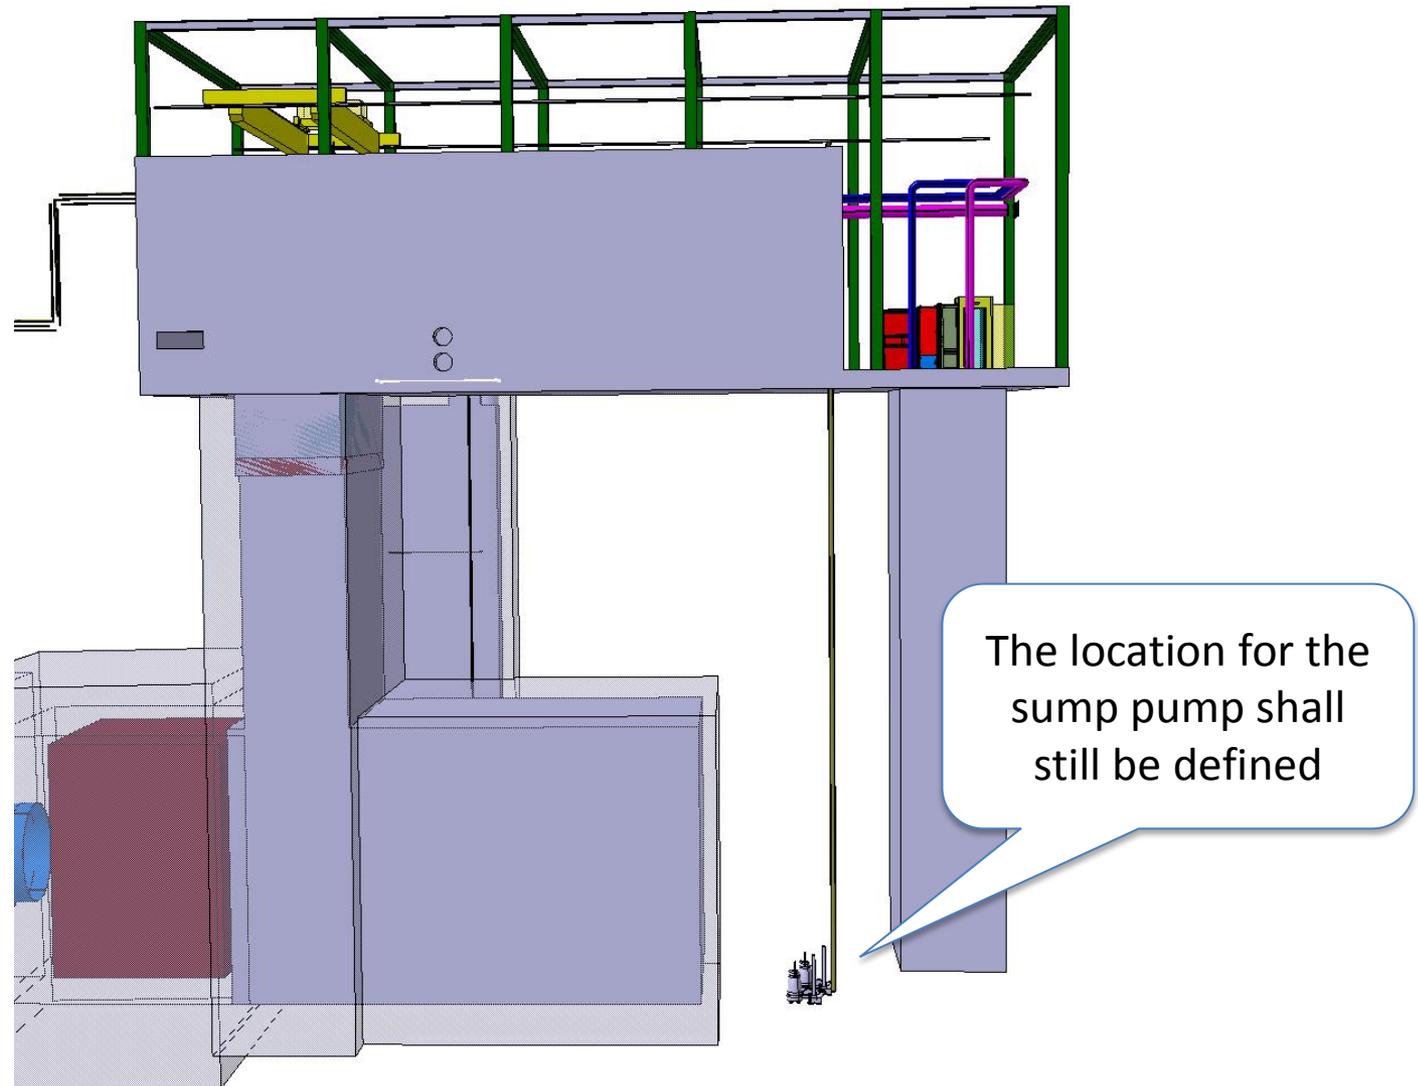

# Decay pipe and vessel helium conditioning system

# Sump pumps

# Sump pumps at Muon pit

# Conclusions

- HVAC and hydraulic systems integration in the CENF area are close to be finished.
- Helium cooling system for the decay pipe and for the target cooling shall be designed: external support requested.
- Helium purification system is under investigation. Helium purity target defined (0.1%).
