

# The Timepix3 readout chip for hybrid pixel detectors: update on tests and measurements

Massimiliano De Gaspari  
CERN, European Organization for Nuclear Research  
Geneva, Switzerland

Presented at the CLIC Detector and Physics  
Collaboration Meeting, June 11<sup>th</sup> 2014

# Outline

---

- Introduction to Timepix3
- Measurements with sensor
- Summary

# Timepix → Timepix3

	Timepix	Timepix3
Year	2006	2013
# pixels	256 x 256	
Pixel size	55 x 55 $\mu\text{m}$	
Technology	CMOS 250nm	CMOS 130nm
Measurement modes	- Time-Over-Threshold (TOT) - Time Of Arrival (TOA) - Event counting (PC)	- Simultaneous 10bit TOT and 18bitTOA - 18bit TOA only - 10bit PC and 14bit integral TOT (itot)
Readout type	Sequential (frame-based)	- Frame-based - Data Driven (zero suppressed)
Dead time	>300 $\mu\text{s}$ full frame readout	> 375ns packet transfer, maximum hit rate 40Mhits/s/cm <sup>2</sup>
Time resolution	10ns	1.56ns
TOT monotonicity (h <sup>+</sup> )	No	Yes
Power pulsing	No	Yes
Minimum threshold	~750e <sup>-</sup>	>500e <sup>-</sup>

Timepix3 is a joint design effort by **CERN**, **NIKHEF** and the **University of Bonn**

Main applications are:

- Fast readout of solid-state pixelated sensors
- Power pulsing tests for the Linear Collider
- Readout of gaseous detectors (TPC)
- Vertex Locator for LHCb (future VELOpix)
- Dosimetry

# Timepix3

128 double columns:  
2x256 pixels (64 SuperPixels)  
each

SuperPixel: 2 x 4 pixels

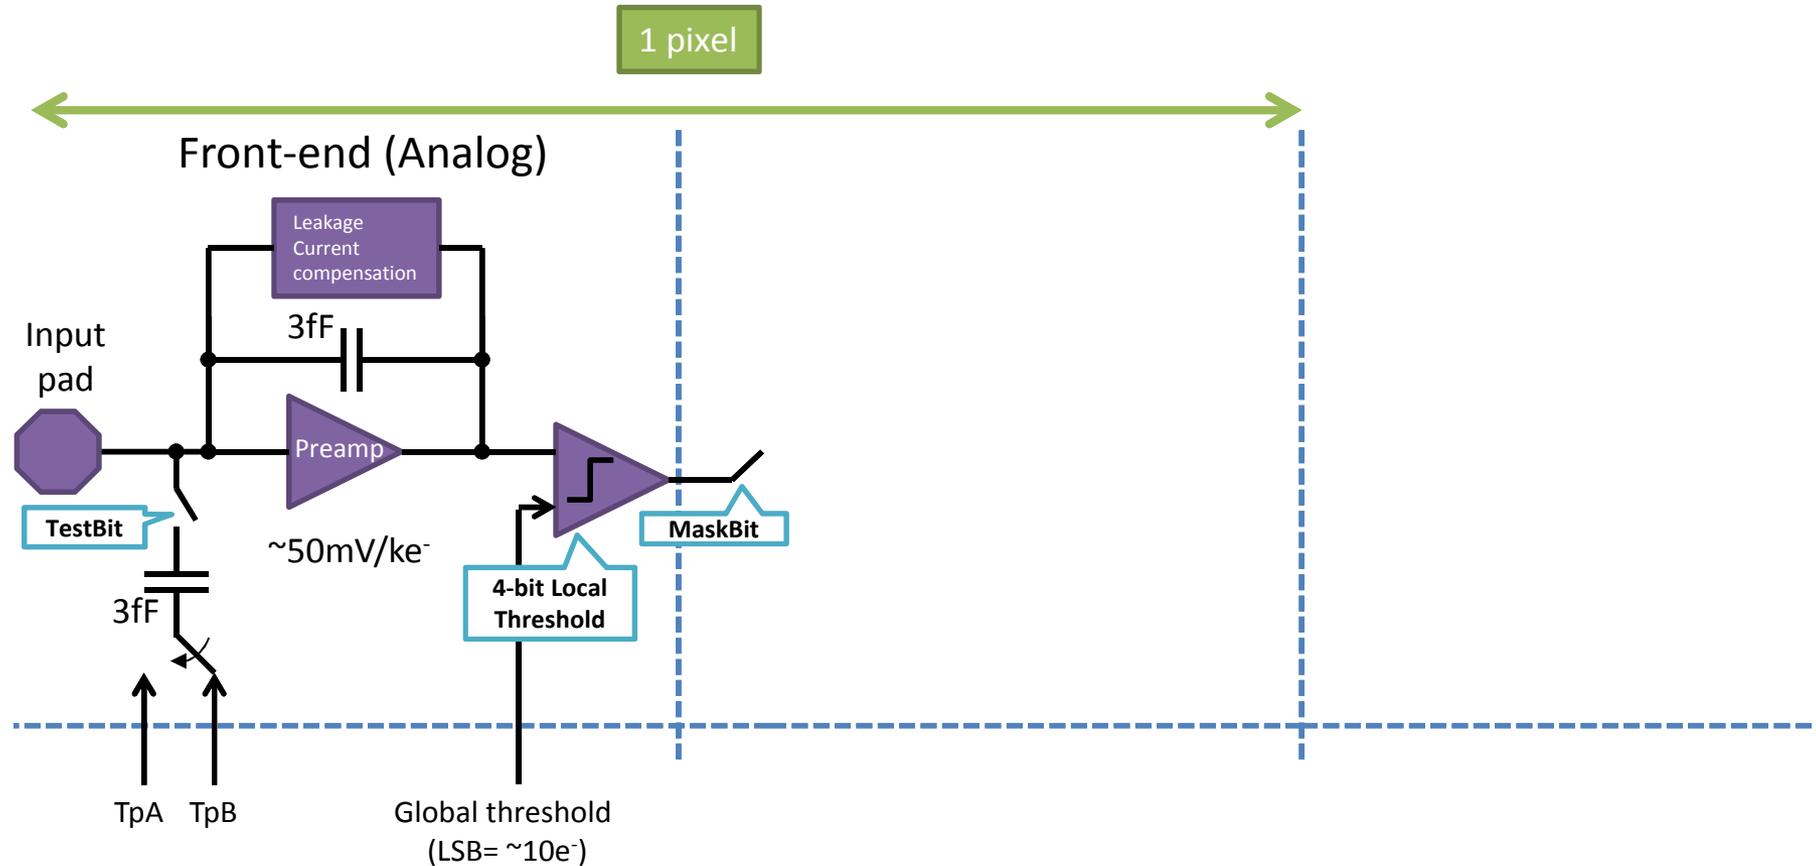

1 per SuperPixel:  
VCO@640MHz  
for the fast TOA

Analog Front-End 13 x 55  $\mu\text{m}^2$

Input pad on top of the digital  
area

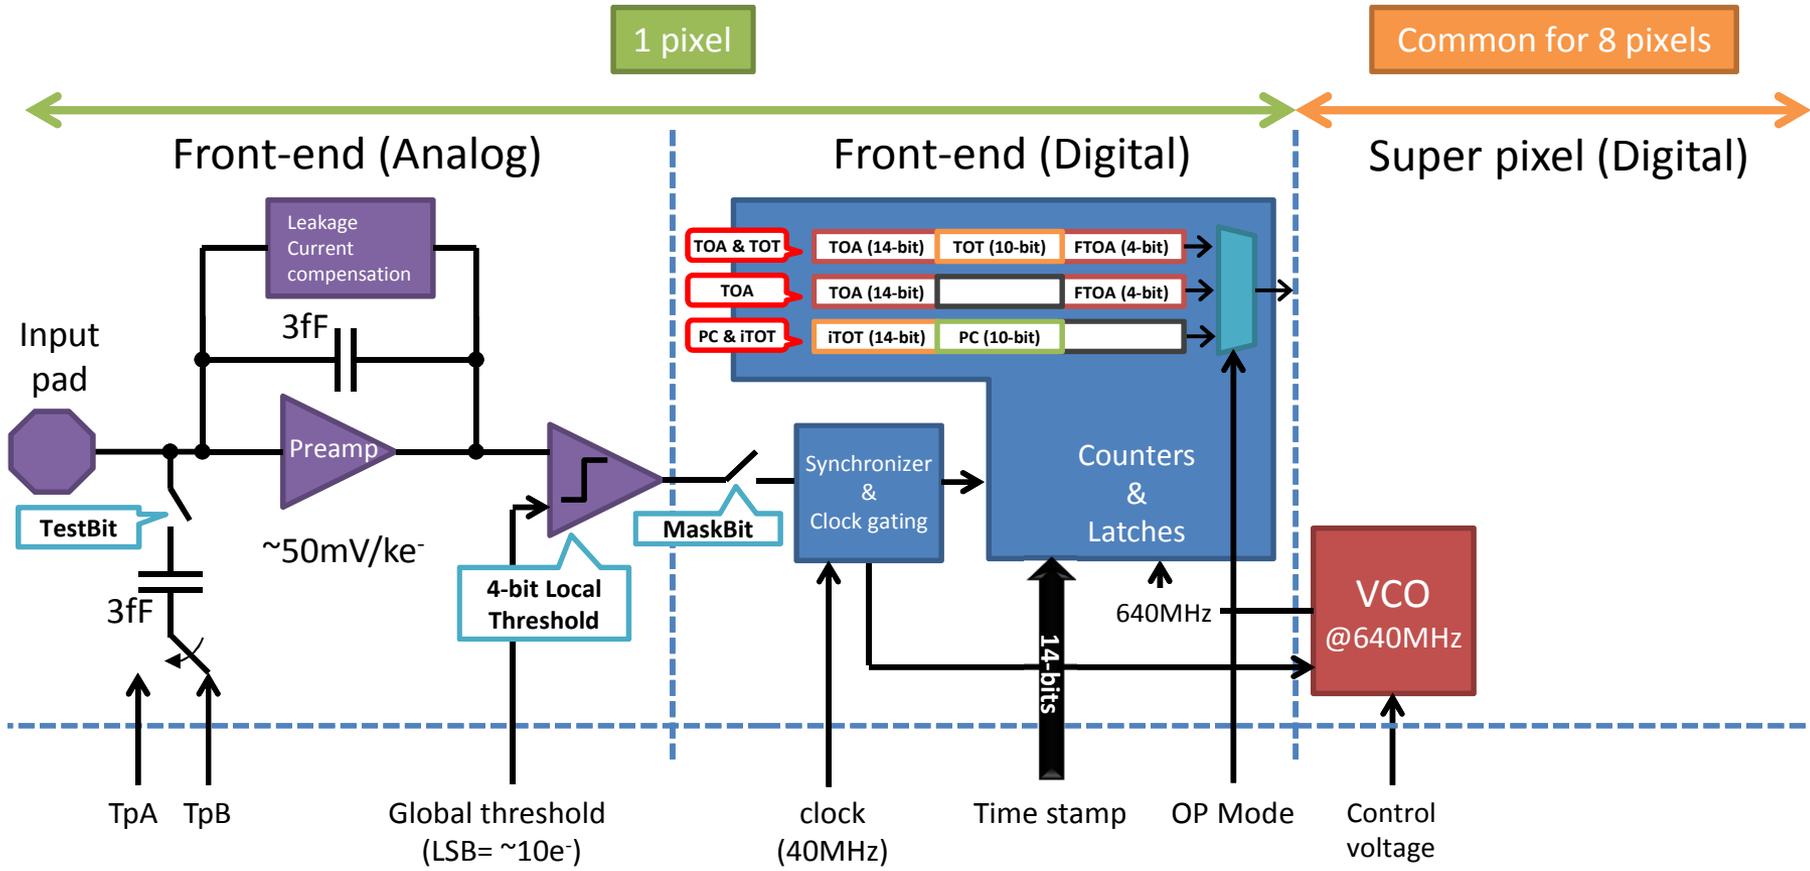

# Pixel/SuperPixel diagram

# Front-end specifications

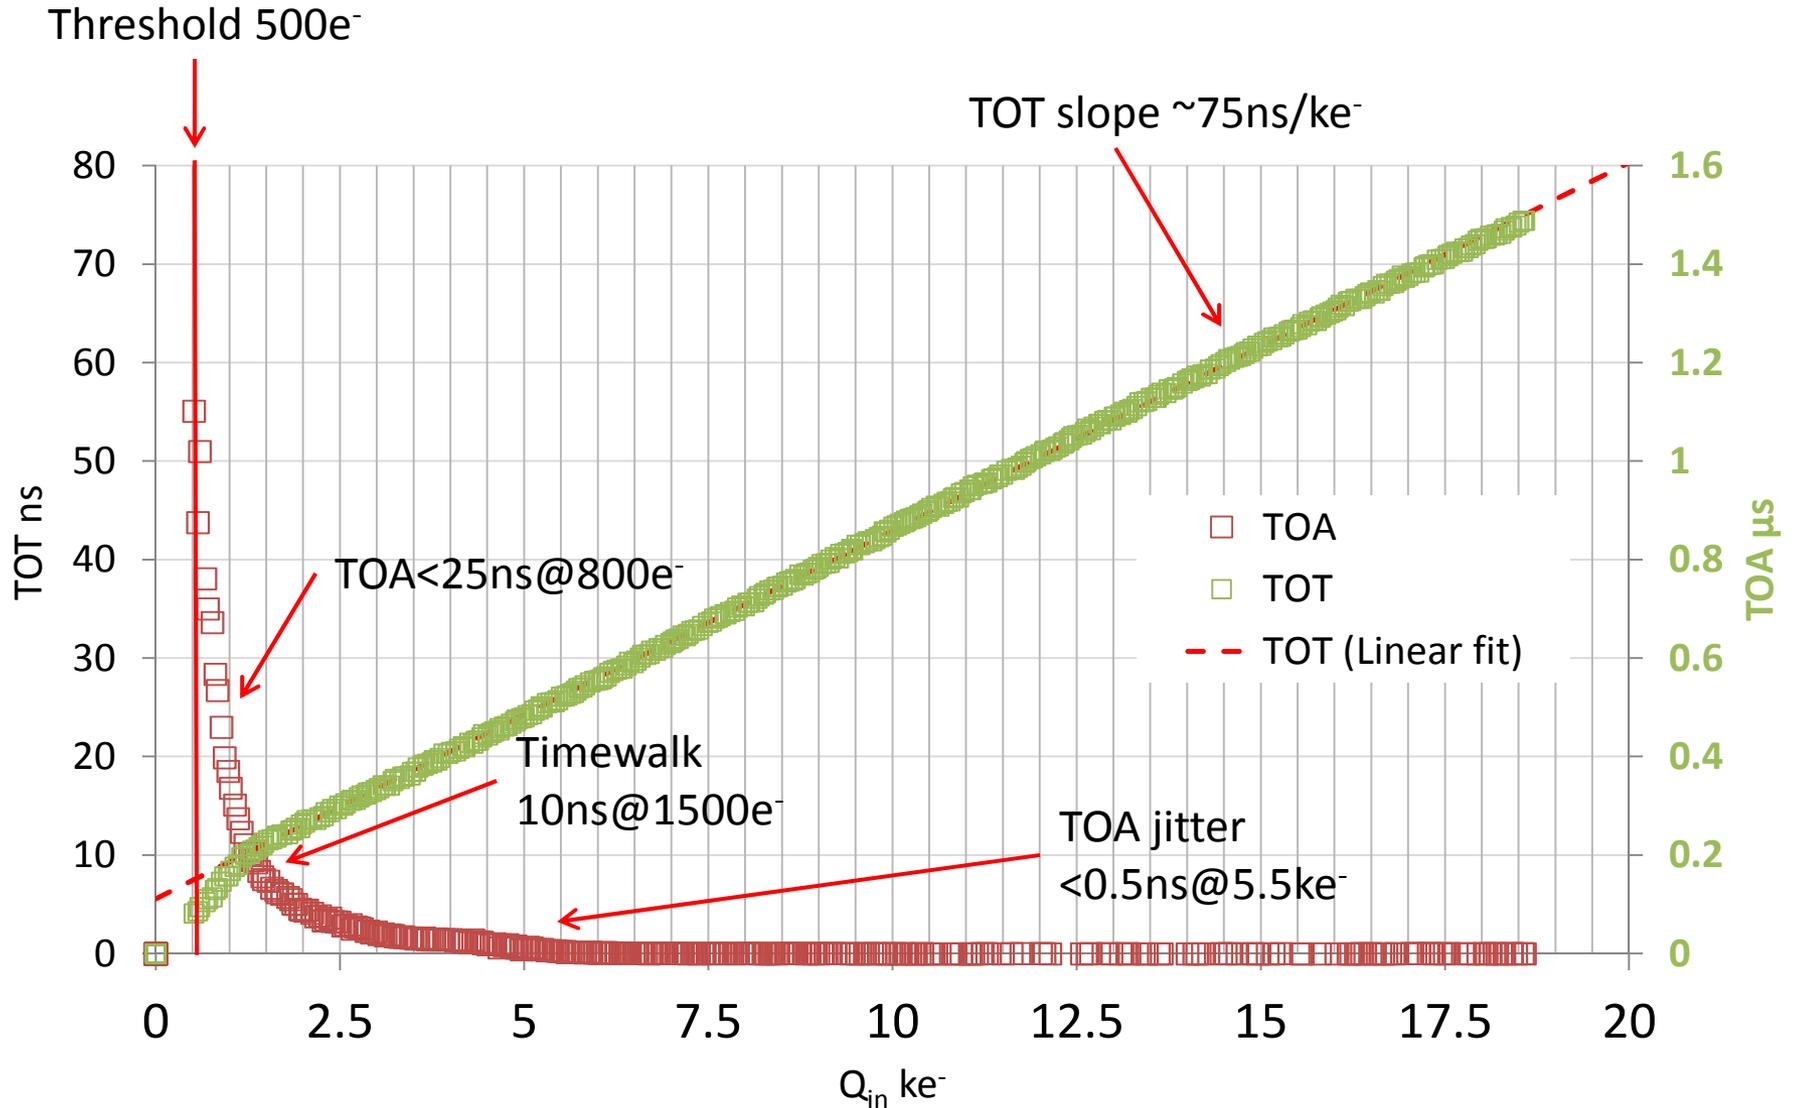

Parameter	Value	Notes
Area	55 $\mu$ m $\times$ 13.5 $\mu$ m	
Signal polarity	Positive and negative	
Detector capacitance	~50fF	25fF to 100fF
Leakage current	-5nA to +20nA	
Amplitude linearity	Not required	Time measurement
TOT monotonicity	Yes, up to 300kh <sup>+</sup>	
ToA jitter and mismatch	Compatible with 1.56ns resolution	Gas detector applications
Time-to-peak	Target 25ns	In view of VELOpix
Noise + threshold mismatch	~90e <sup>-</sup>	for a minimum threshold ~500e <sup>-</sup>
Equalization DACs	4bit	Compensate pixel-to-pixel threshold mismatch
Power consumption	12 $\mu$ W/pixel	

# Outline

- Introduction to Timepix3
- Measurements with:
  - 300 $\mu$ m Silicon P-on-N sensor
  - SPIDR readout system (thanks NIKHEF)
- Summary

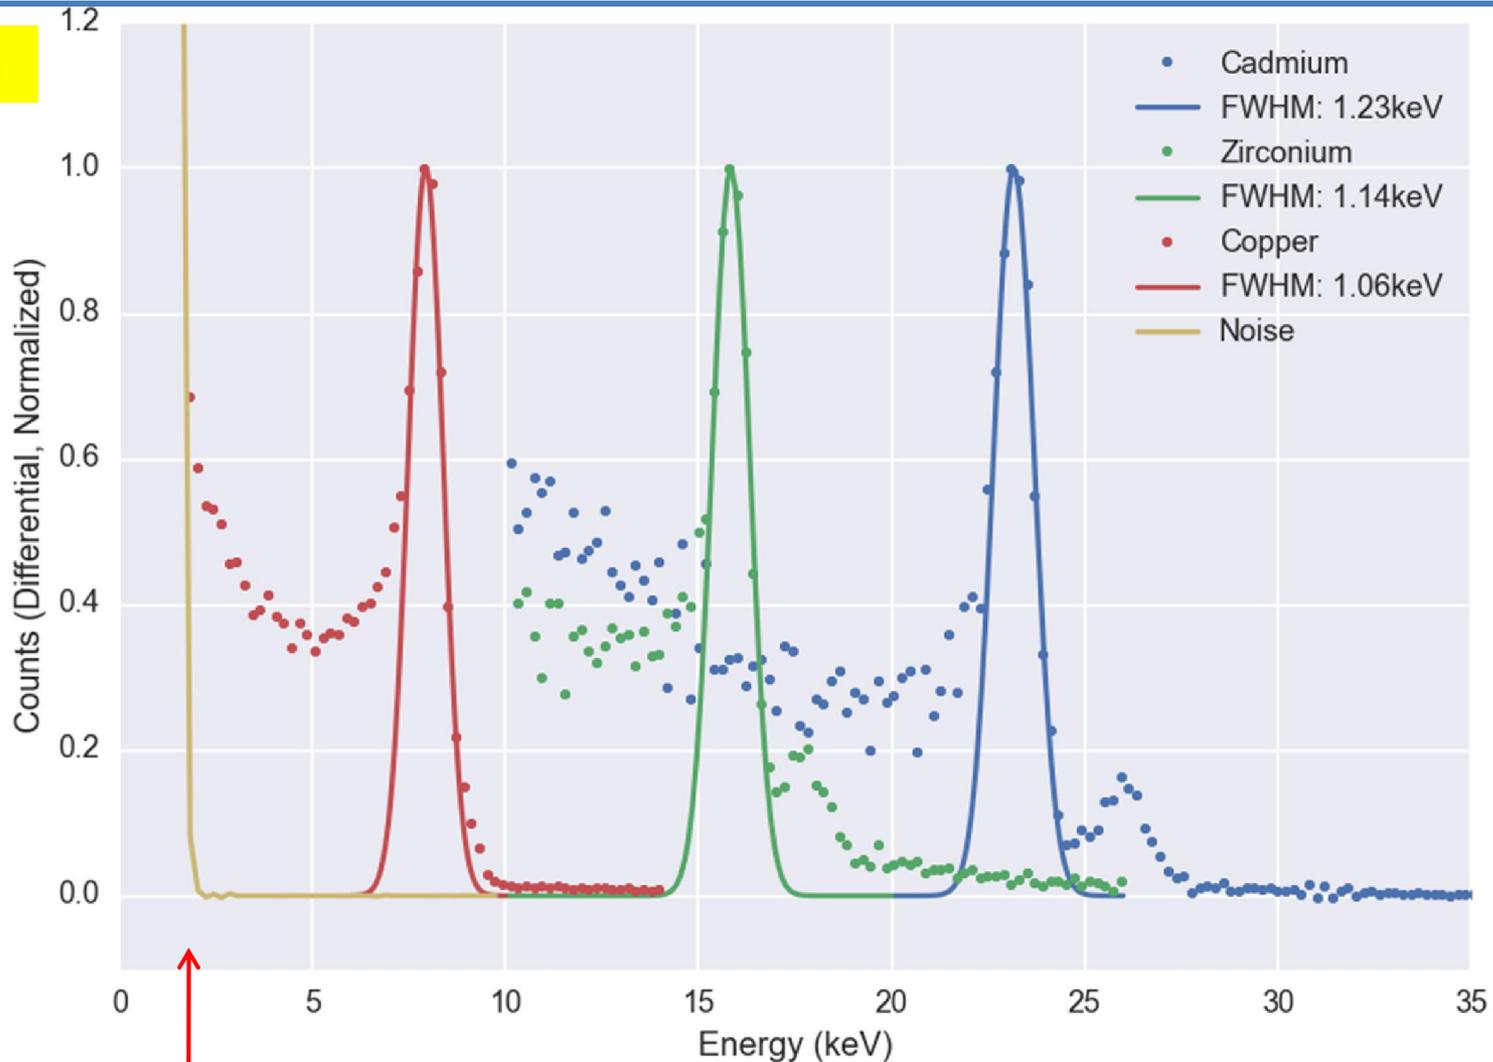

# Timewalk and TOT linearity

Measurements using test pulses, averaged over 64 acquisitions

# Fluorescence measurements (65k pixels)

E. Fröjdh

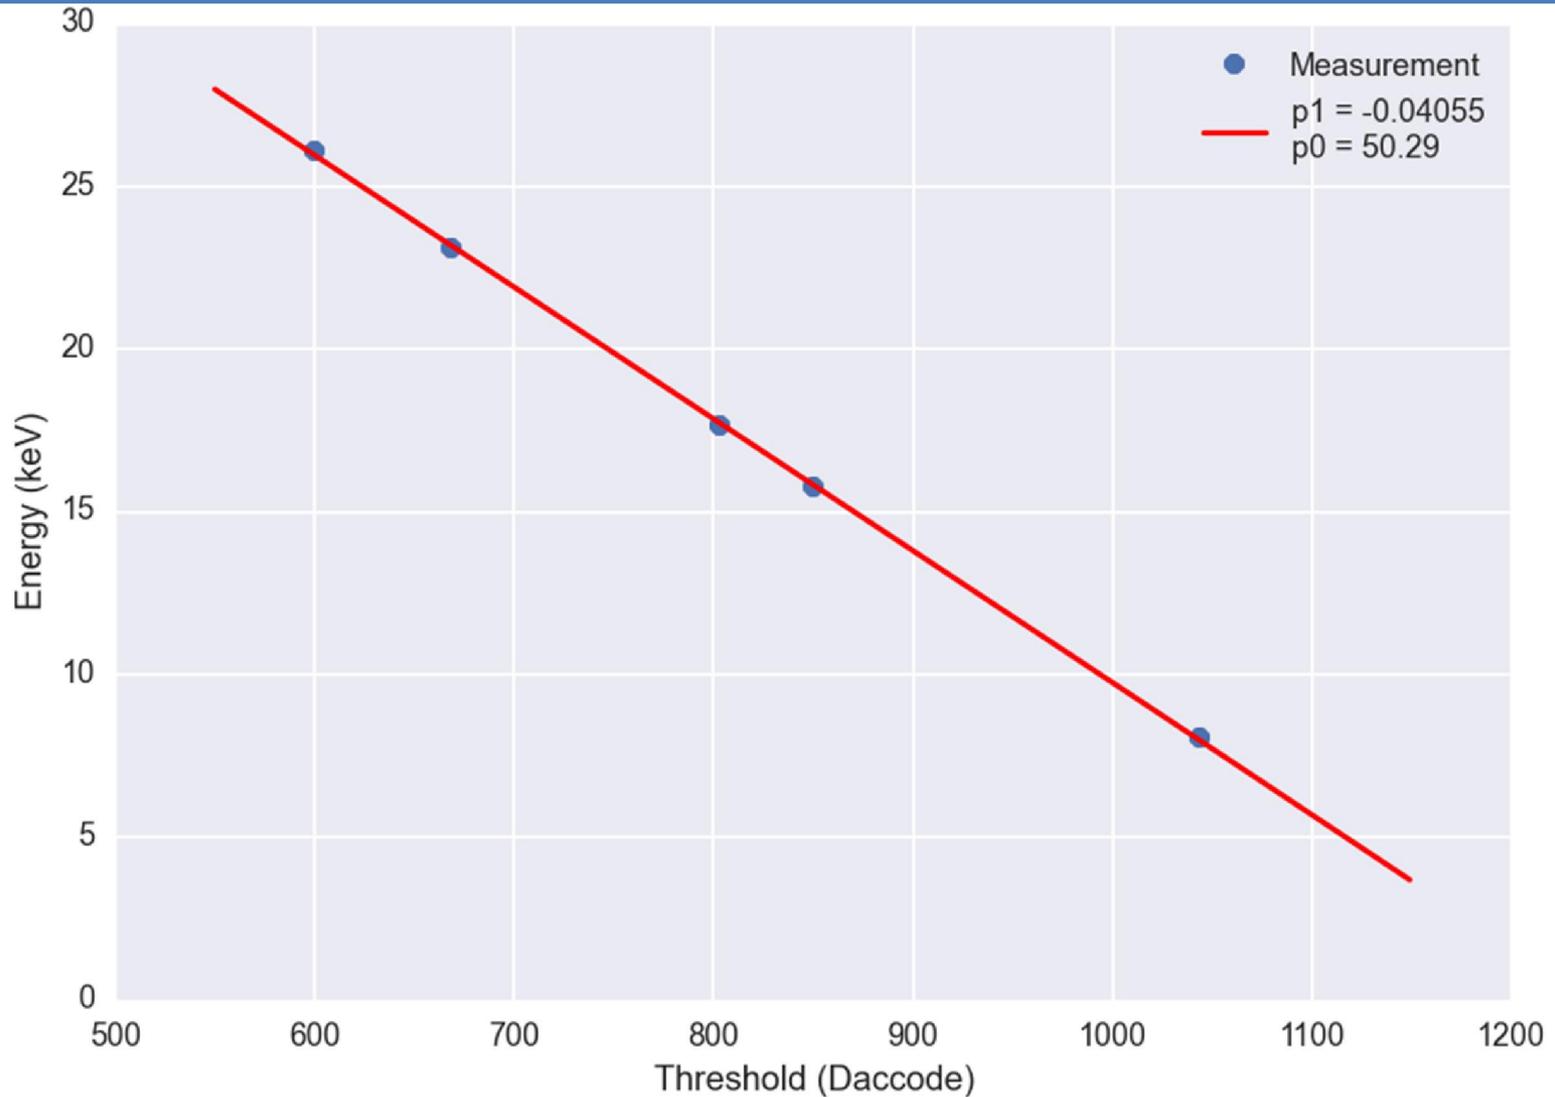

Noise hits start at 2keV=550e<sup>-</sup>

FWHM → energy resolution  $\sigma=124e^-$  (Cu)

Equalization using noise floor

Charge measured over full matrix

# Gain calibration using fluorescence (65k pixels)

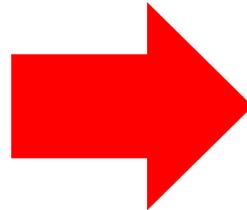

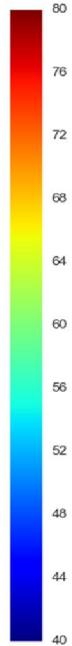

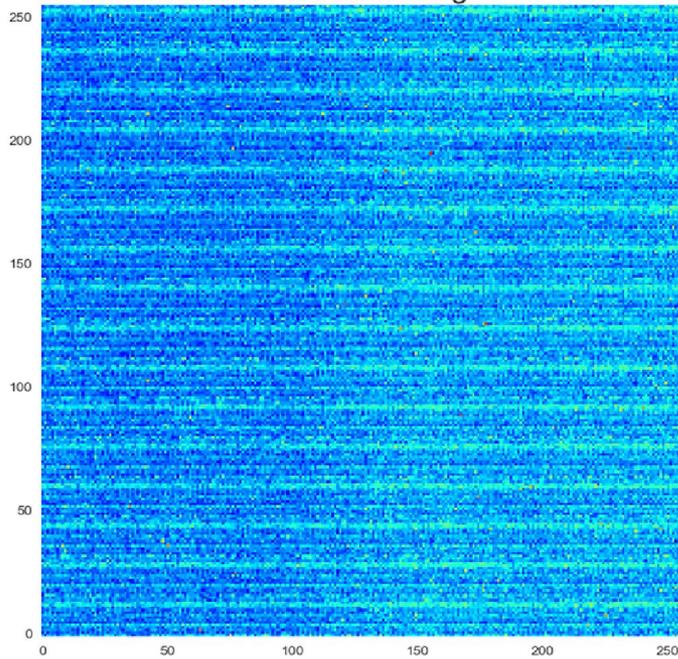

$$40.5\text{eV/LSB} = 11.2\text{e}^-/\text{LSB} = 44.6\text{mV/ke}^-$$

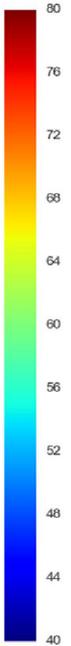

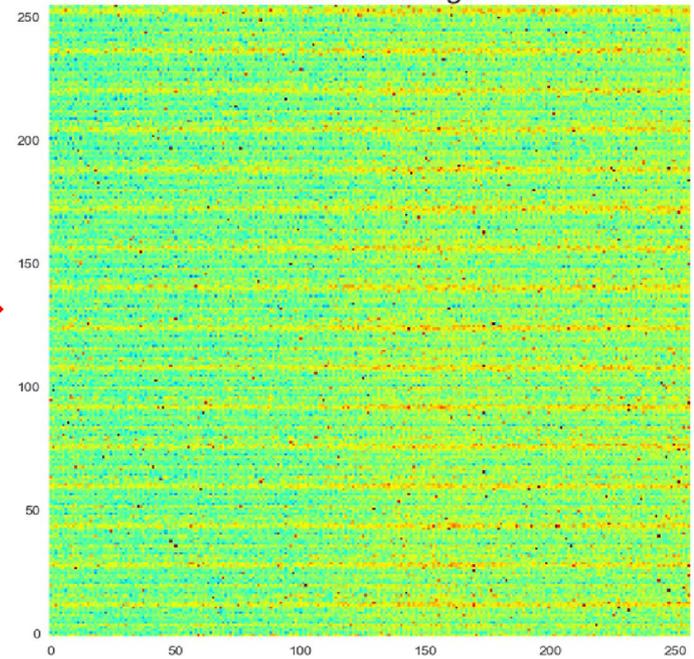

# Noise before/after bonding

Same chip measured at wafer level and after sensor bonding:

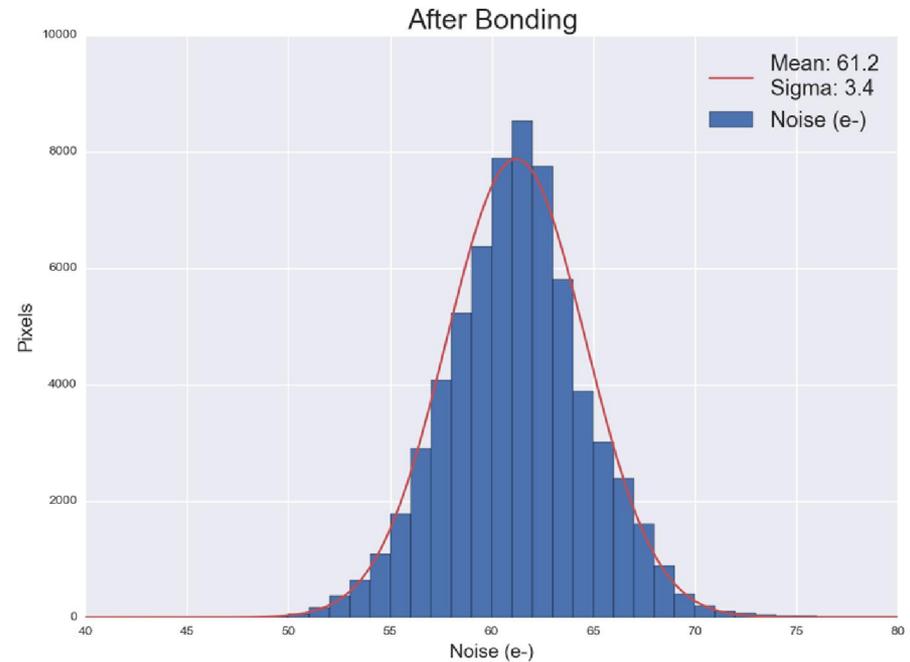

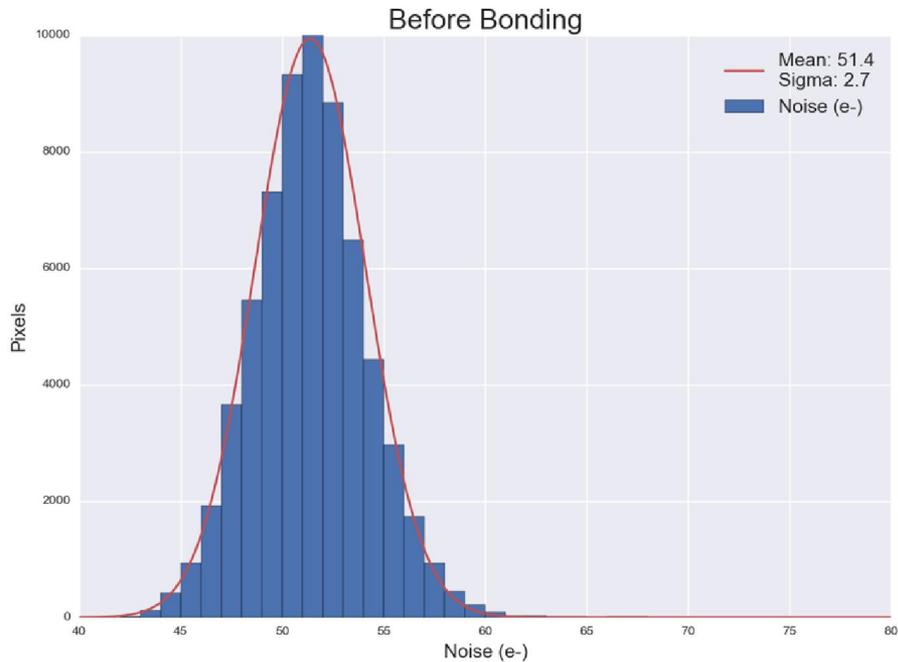

Before Bonding

After Bonding

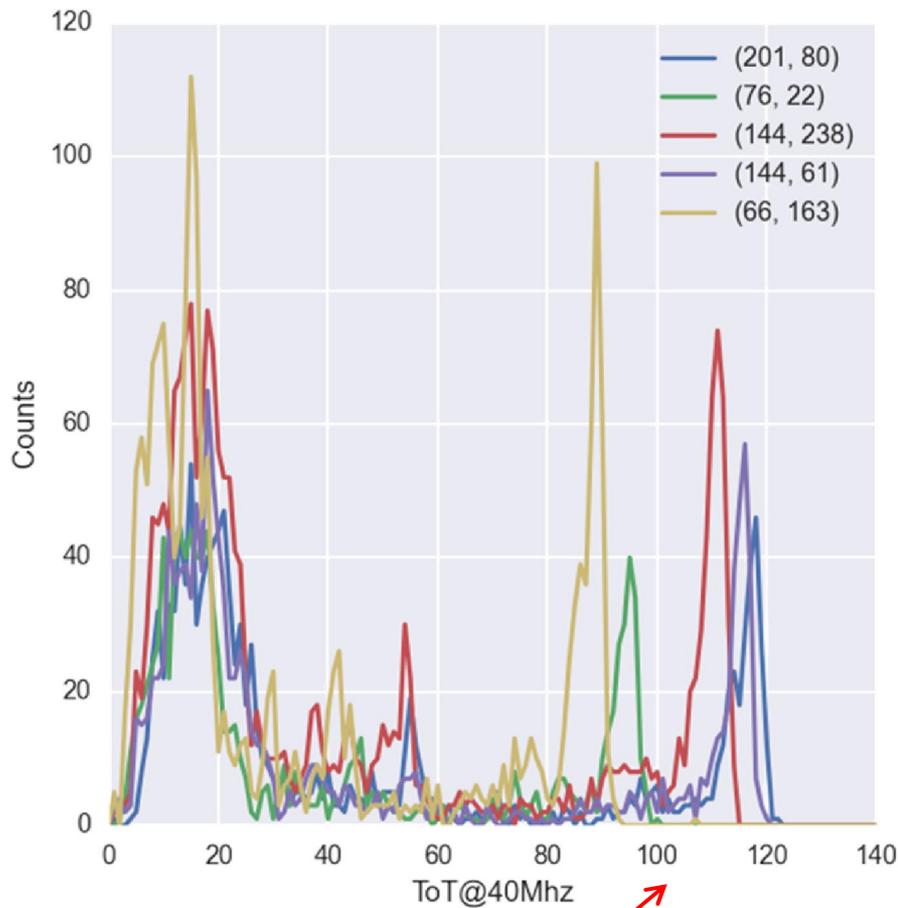

# Noise distribution

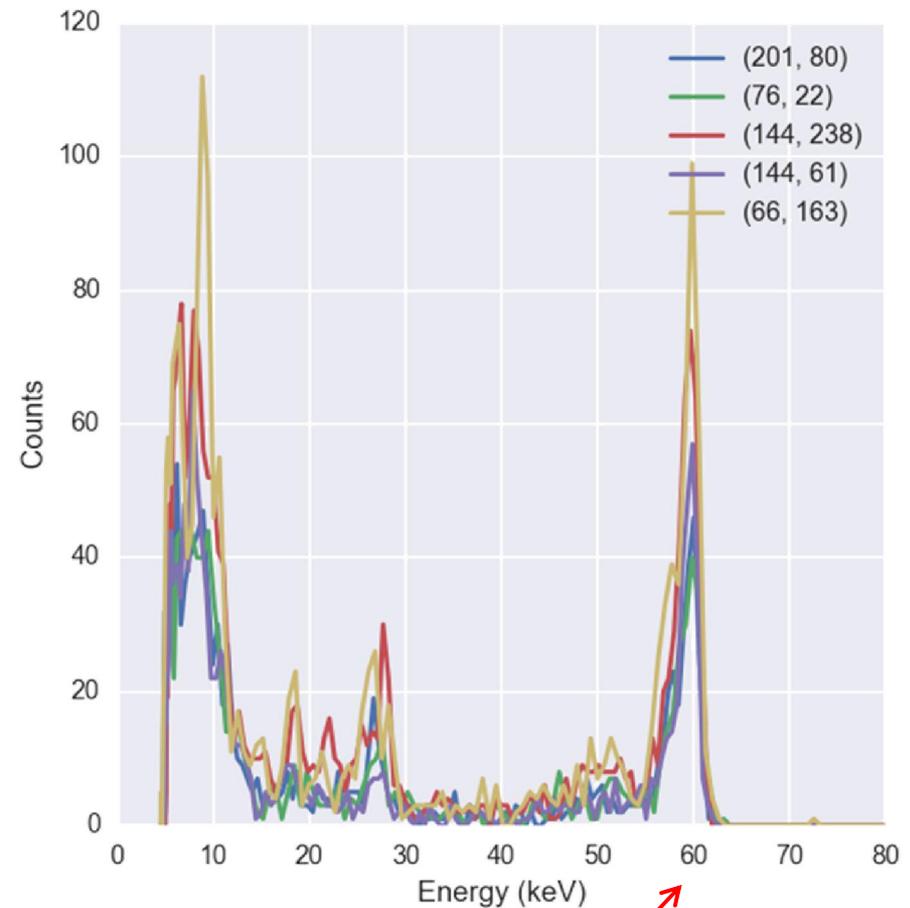

Average noise over the full matrix increases by  $10e^-$  only. Its distribution widens a little bit.

# TOT (energy) measurements: $^{241}\text{Am}$

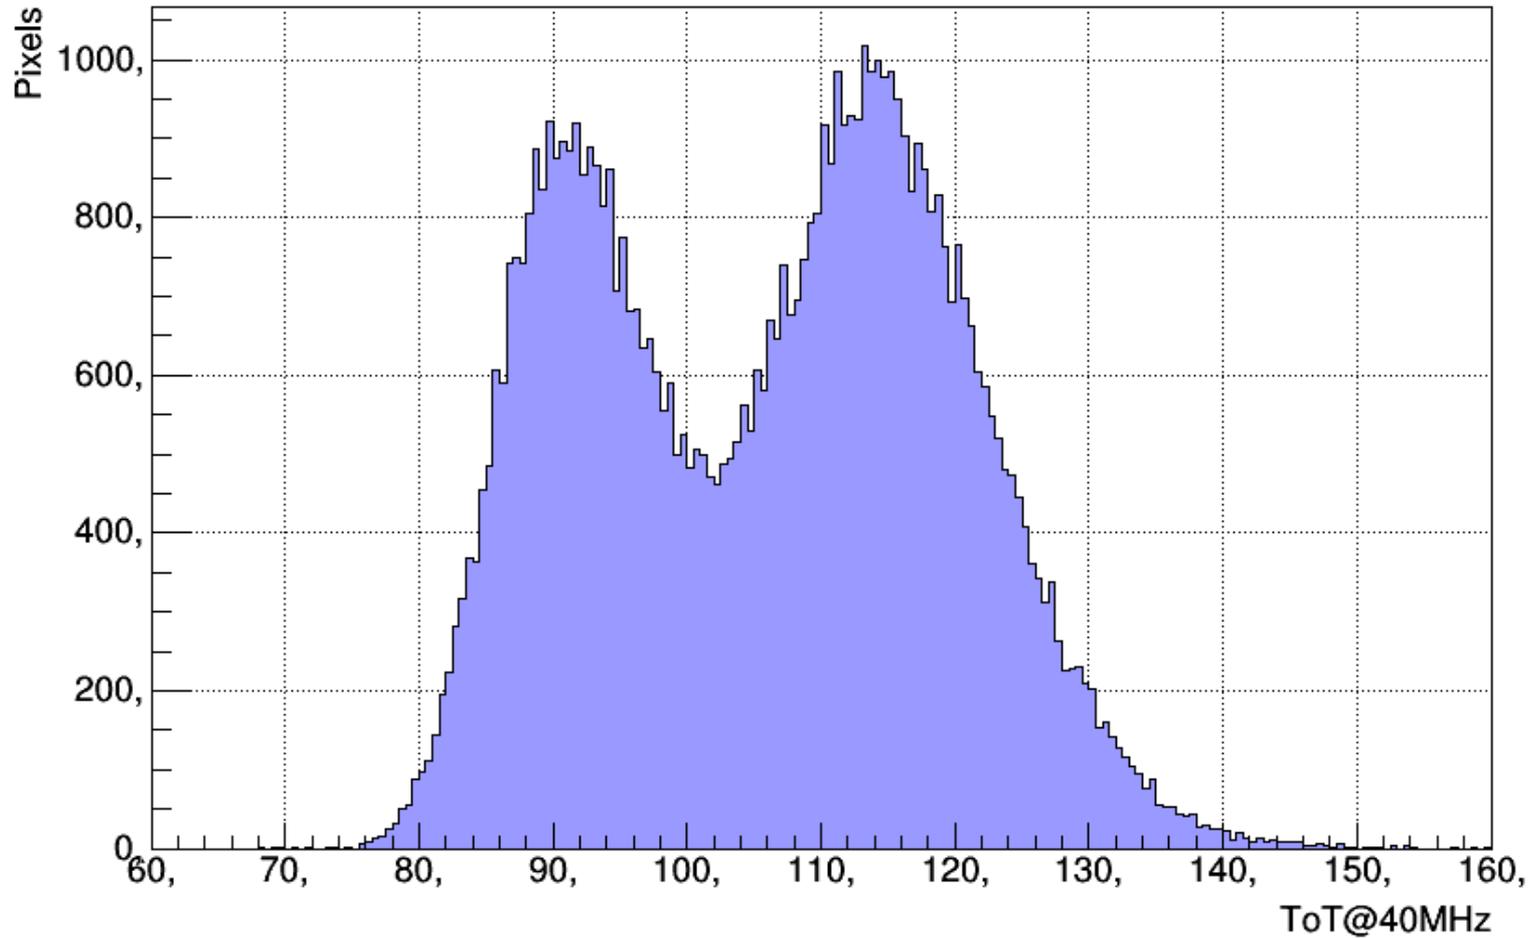

TOT measurements show some pixel-to-pixel mismatch

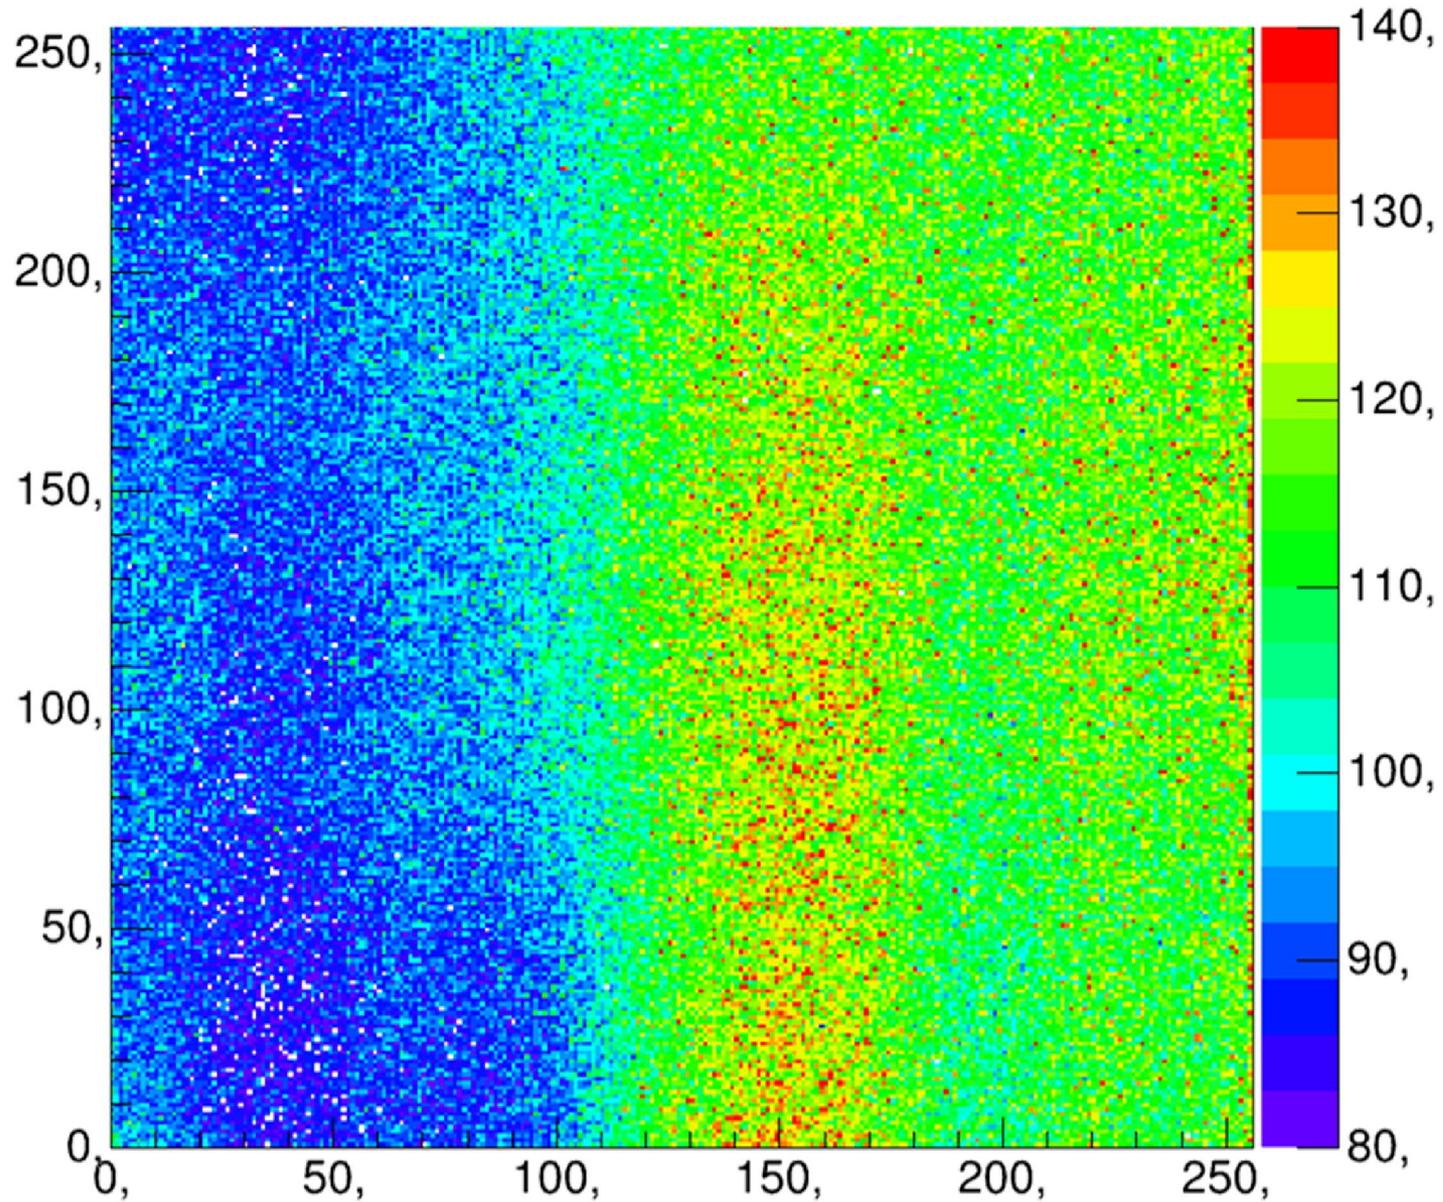

After TOT calibration

# TOT gain distribution

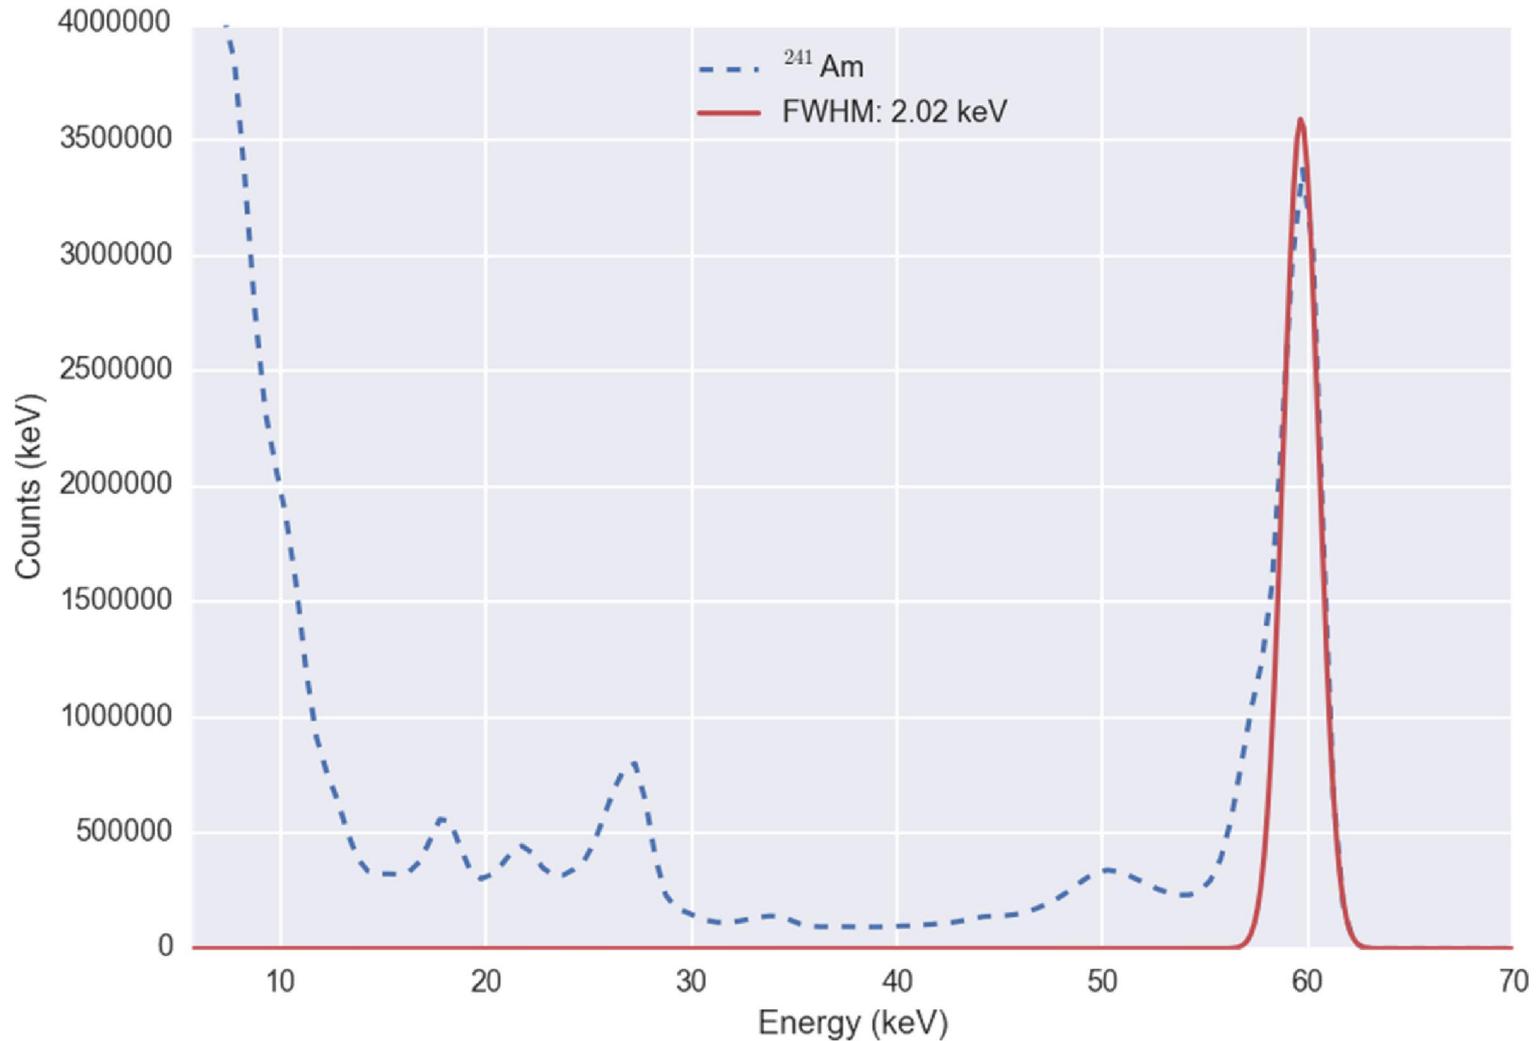

59.5 keV -  $^{241}\text{Am}$

# TOT gain map

# Spectrum of $^{241}\text{Am}$ after TOT calibration

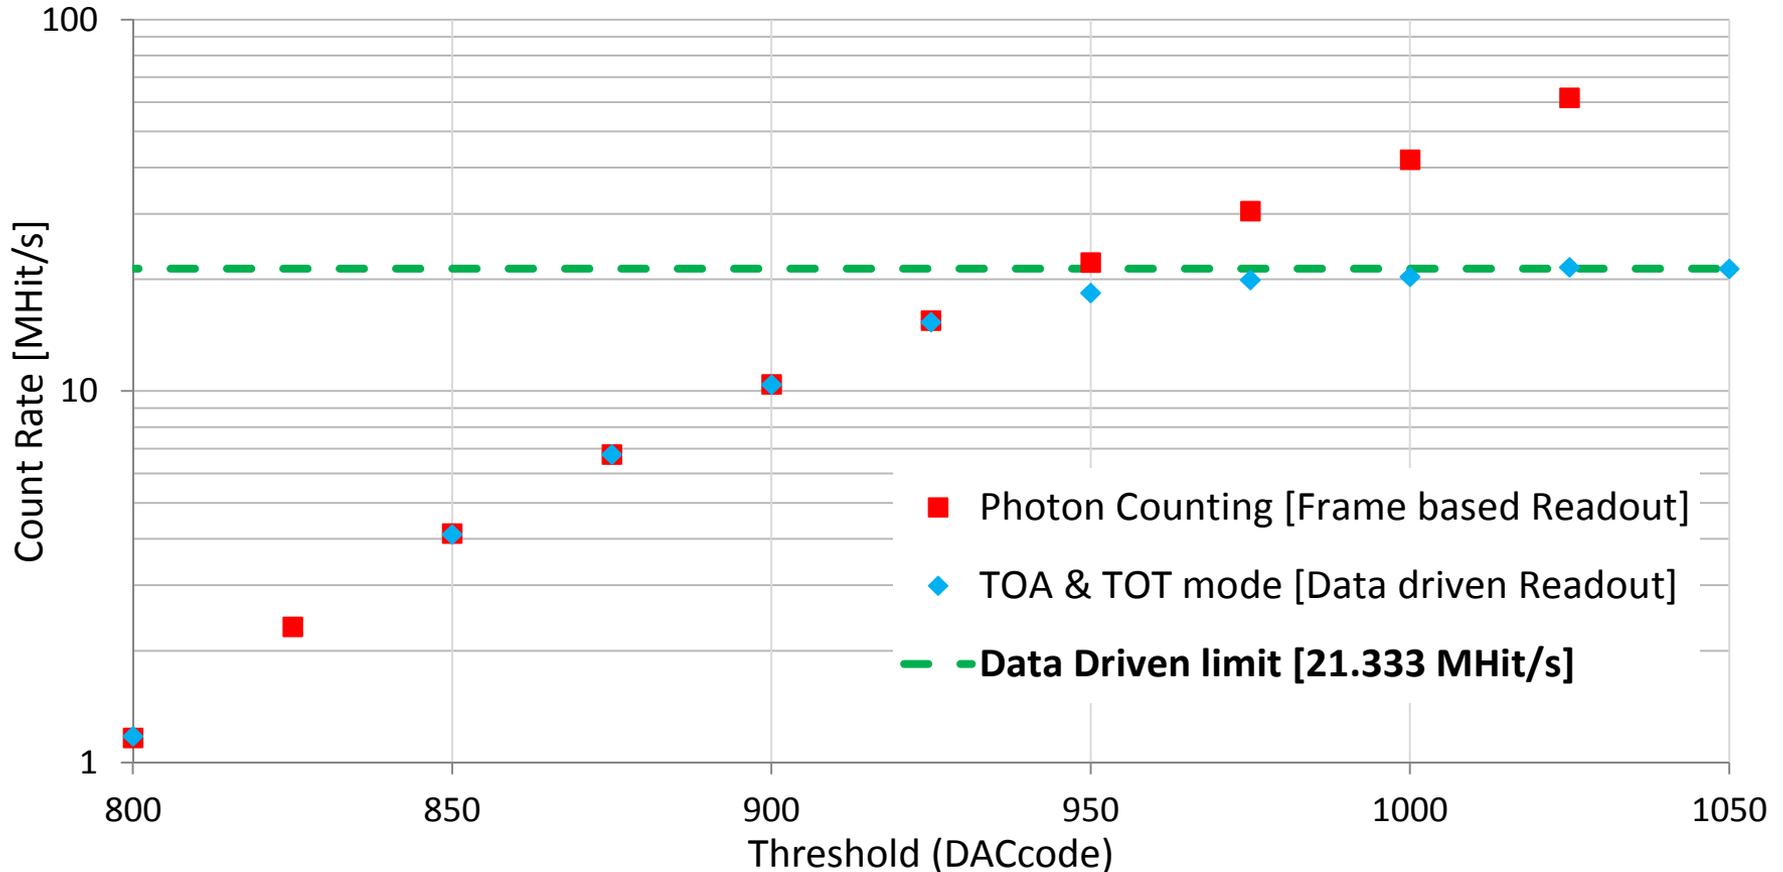

# Count rate

Measurement done with a Cu X-ray tube

Count rate modulated by adjusting the global threshold

X. Llopart

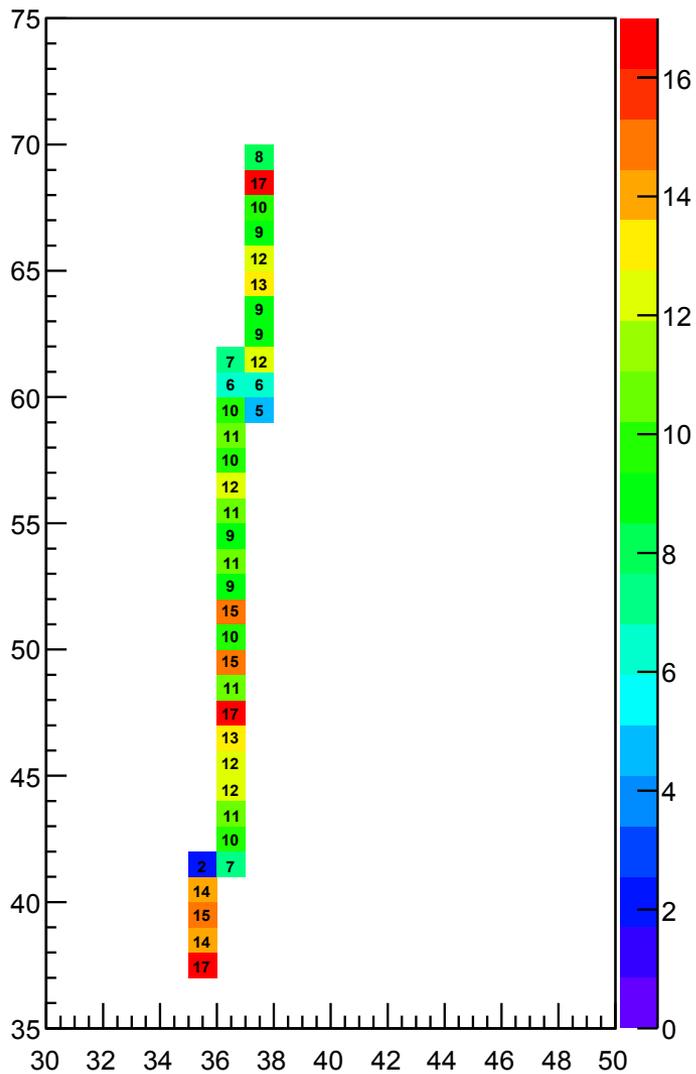

TOA & TOT mode limited by output block bandwidth (set at 8x160Mbps for this measurement)

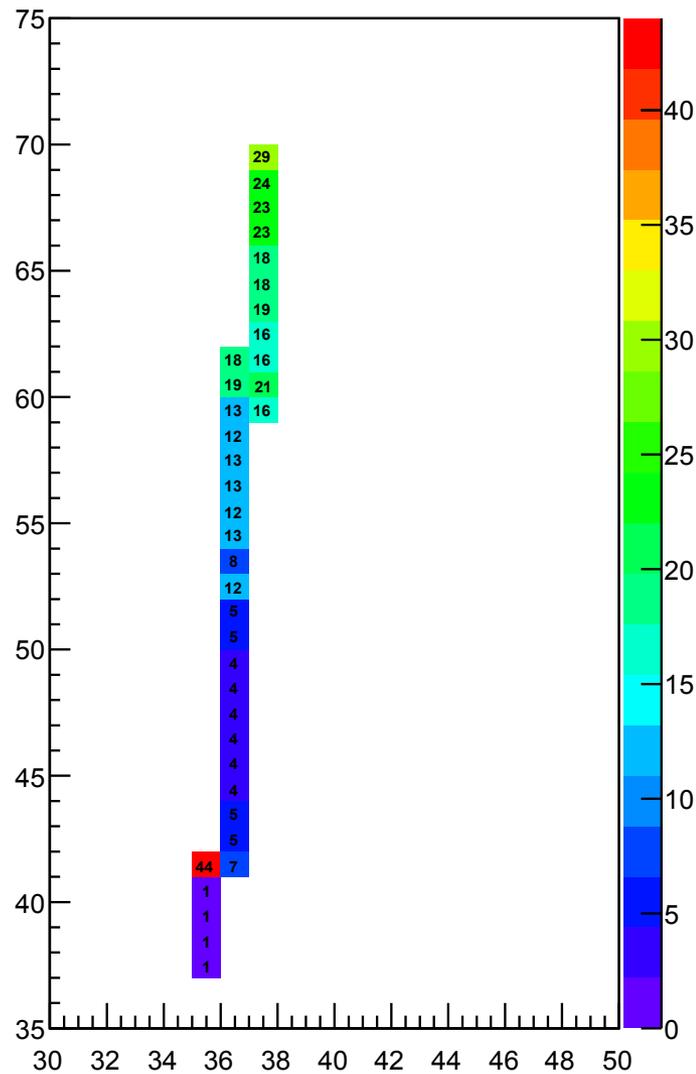

Maximum count rate possible is **85.33 Mhit/s** @ 8x640Mbps links (43MHits/s/cm<sup>2</sup>)

# MIP (cosmic)

ToT

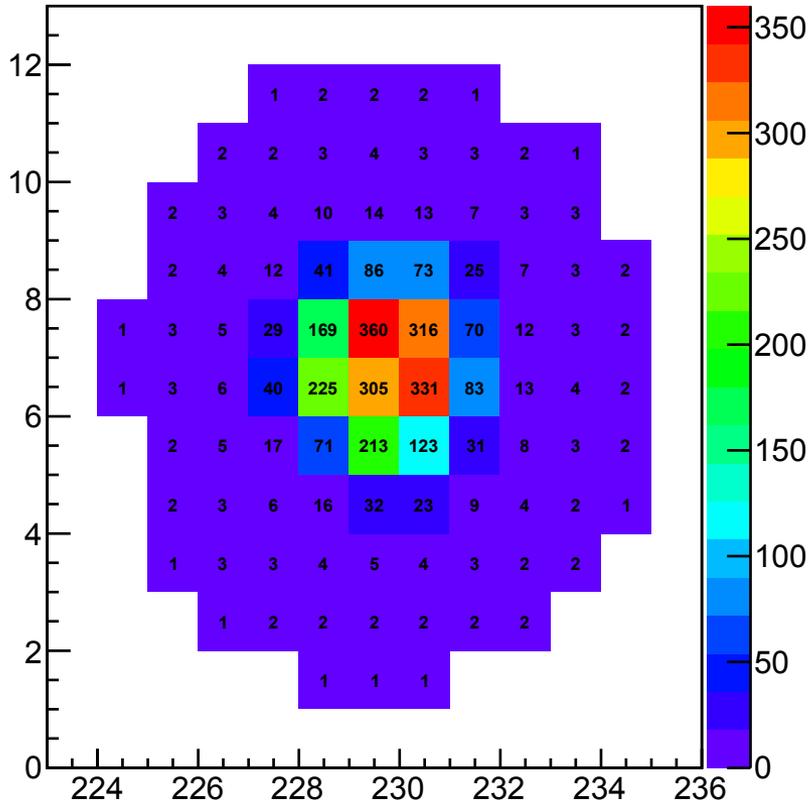

Time (ns)

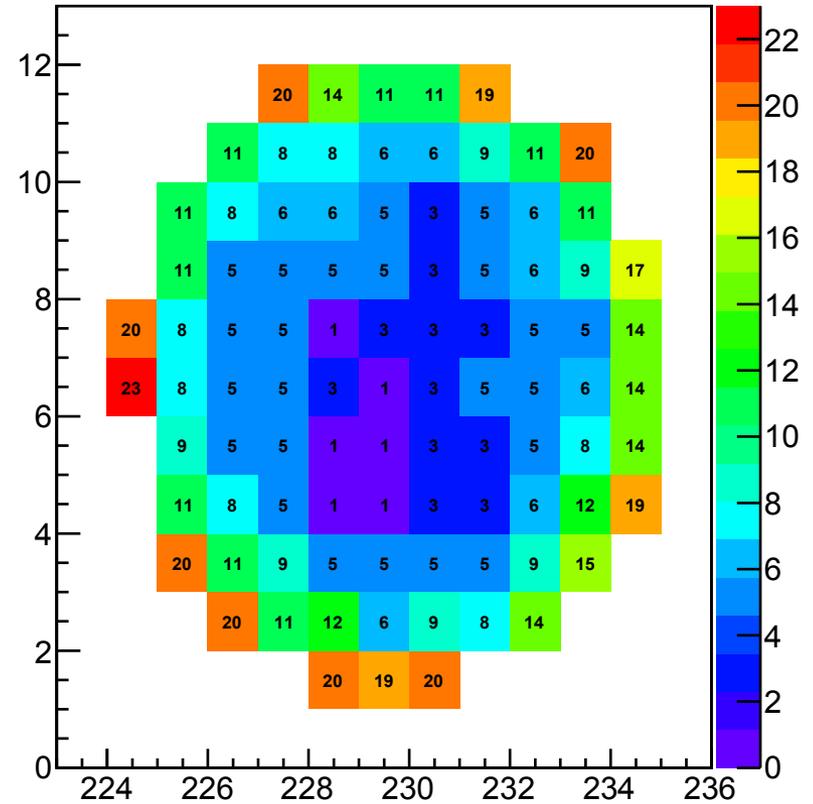

# Alpha particle

Tot

Time (ns)

# Outline

---

- Introduction to Timepix3
- Measurements with sensor
- **Summary**

# Summary

- Timepix3 designed and fabricated in 2013
- Tests on bare chips and on wafers give good results
- First measurements with 300 $\mu\text{m}$  Silicon sensors look promising

	Bare chip	With 300 $\mu\text{m}$ Silicon sensor
Noise	51.4 $\pm$ 2.7 e <sup>-</sup> rms	61.2 $\pm$ 3.4 e <sup>-</sup> rms
Threshold mismatch (equalized)	35e <sup>-</sup>	35e <sup>-</sup>
Minimum threshold	500e <sup>-</sup>	550e <sup>-</sup>
TOT mismatch	6.5% rms	
Timewalk (1ke <sup>-</sup> above threshold)	10ns	
TOA < 25ns	Charge > 0.8ke <sup>-</sup>	
TOA jitter < 0.5ns	Charge > 5.5ke <sup>-</sup>	
Energy resolution		124e <sup>-</sup> (Cu) with equalization on noise floor
Maximum count rate		85 Mhit/s (43MHits/s/cm <sup>2</sup> )
