

Experiments' Expectations for 2015

Tuesday, September 23, 2014 9:10 AM (20 minutes)

Expectations and constraints from the LHC experiments concerning the commissioning procedure and the running conditions for the 2015 data taking period are discussed, as well as the experiments views about the various beam parameters for the p-p period, like beam energy, maximum pileup, bunch spacing and luminosity limitation in IP2 and IP8. The goals and the constraints of the 2015 physics program are also presented, including the heavy ions period as well as special running conditions.

Presenter: MESCHI, Emilio

Session Classification: Session 3 - 2015 Commissioning with Beam
