

Geant4 workshop, Lisbon, 14 October 2006

# Configuration and Testing

I. McLaren

CERN

# Configuration/Installation

- ❑ Review the Windows Install Guide part of the Geant4 WEB pages. A link will be provided to the Slac specific guides.
- ❑ May also add MacOS specific instructions.
- ❑ Configure should be improved to ease the installation of Vis drivers.
- ❑ Hopefully 64-bit systems will stabilize the location of OpenGL and Motif.
- ❑ New collaborator will study Configure and other distribution mechanisms for G4 both for Windows and Linux/Unix.

# System Testing

Currently there are ▪ 68 integration tests.

Mostly unchanged for some years, are they all still relevant and effective?

- Request Category Coordinators to review their tests.
- Should not need to ask, but is the test quality adequate?
- Are there important items not being tested?
