800 PROCESSOR

Krait 400 CPU
features 28HPm process technology
superior
2GHz+ performance

Adreno 330 for
advanced graphics

Hexagon QDSP6
for ultra low power
applications and custom
programmability

Integrated LTE⁺, 802.11ac⁺, USB 3.0
and BT 4.0 offers broad array
of high speed connectivity

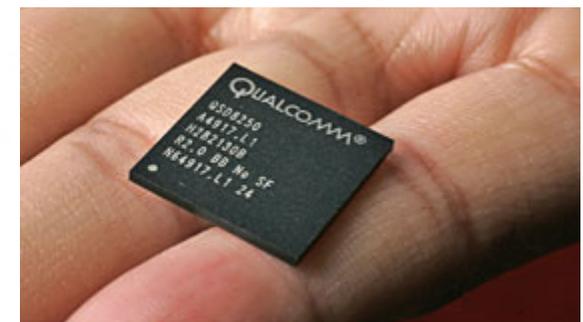

Ultra HD Capture
and Playback
DTS-HD and Dolby
Digital Plus audio
Expanded Gestures

55MP with dual ISP

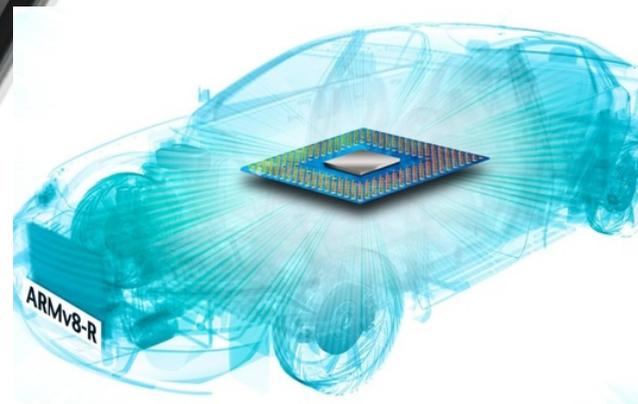

Support for up
to 2560x2048 display
Miracast 1080p
HD support

IZat GNSS with
support for three
GPS constellations

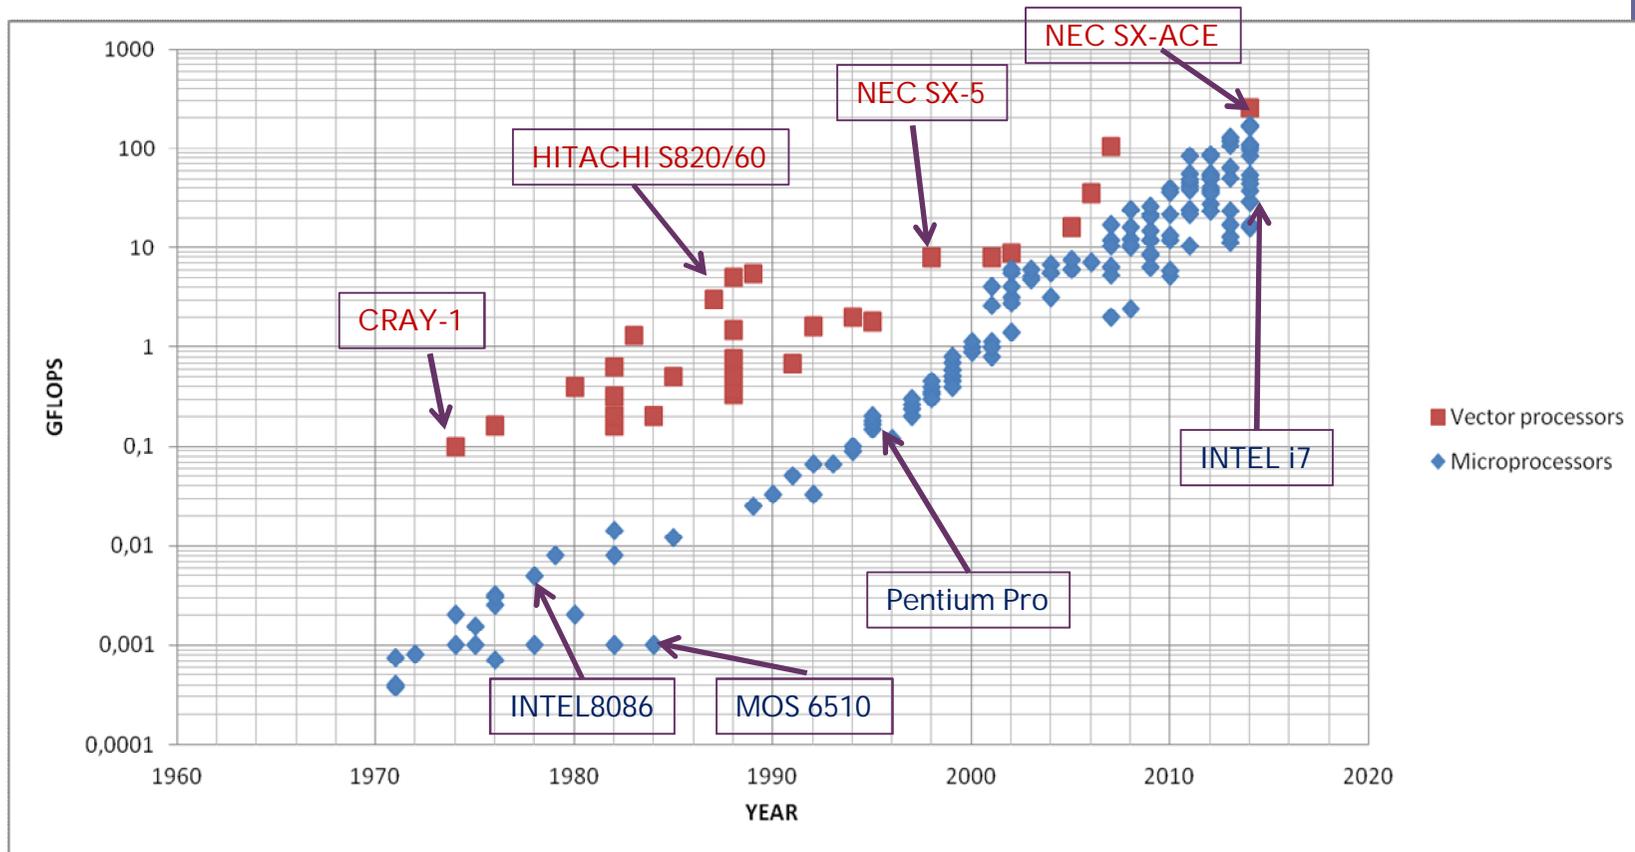

+ Where do I find a SoC?

- Mobile
- Embedded

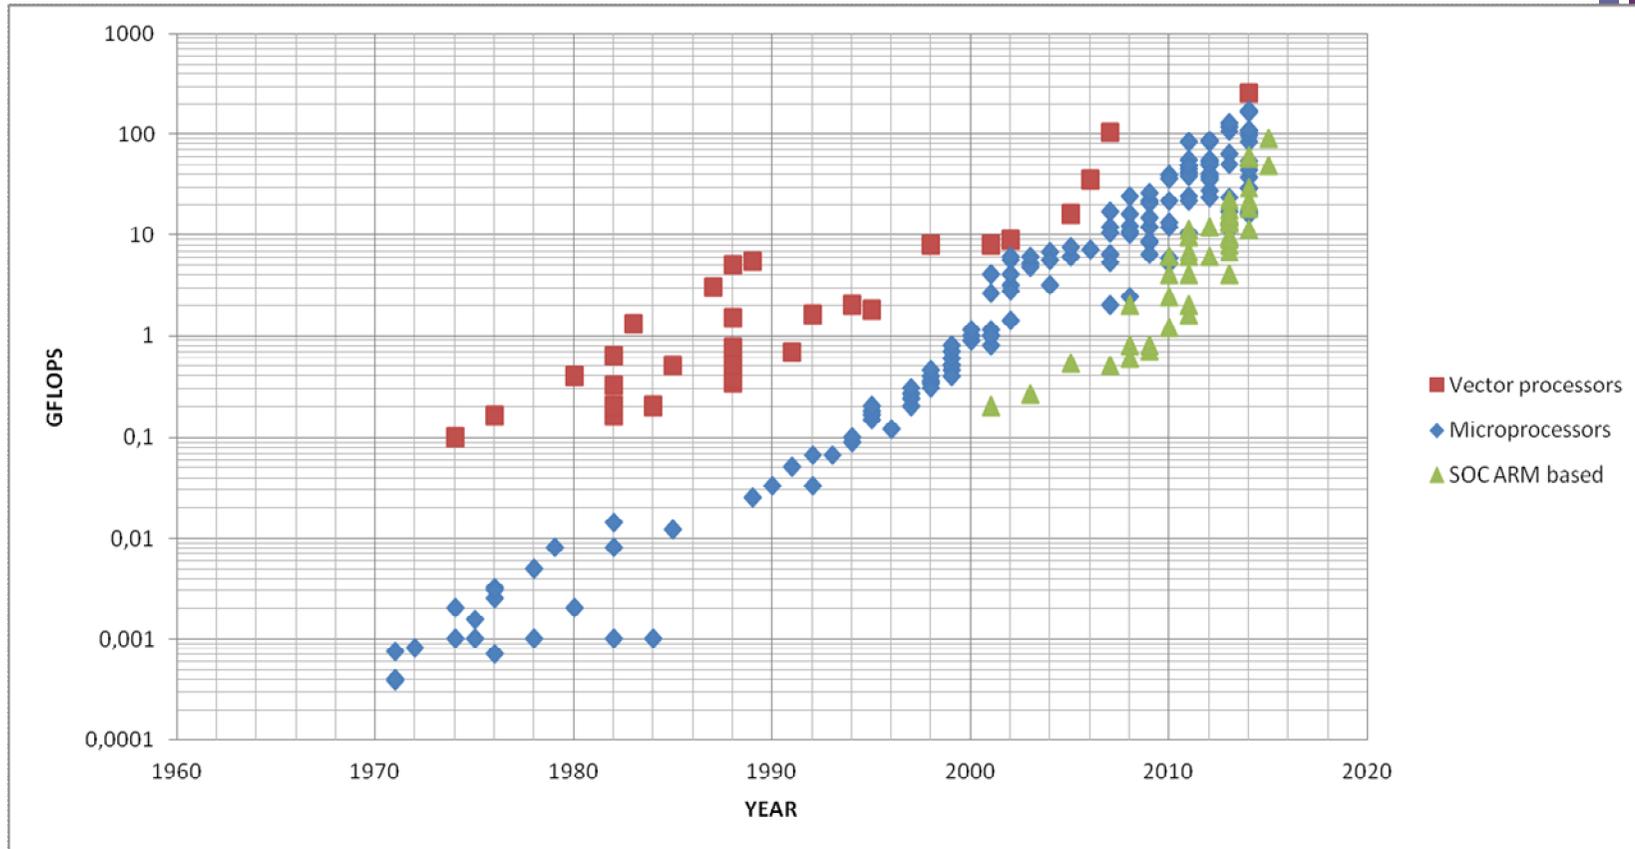

+ Vector vs Micro computing power

- Why did microprocessors take over?
 - They have never been more powerful...
 -but they were cheaper, highly available and less power demanding

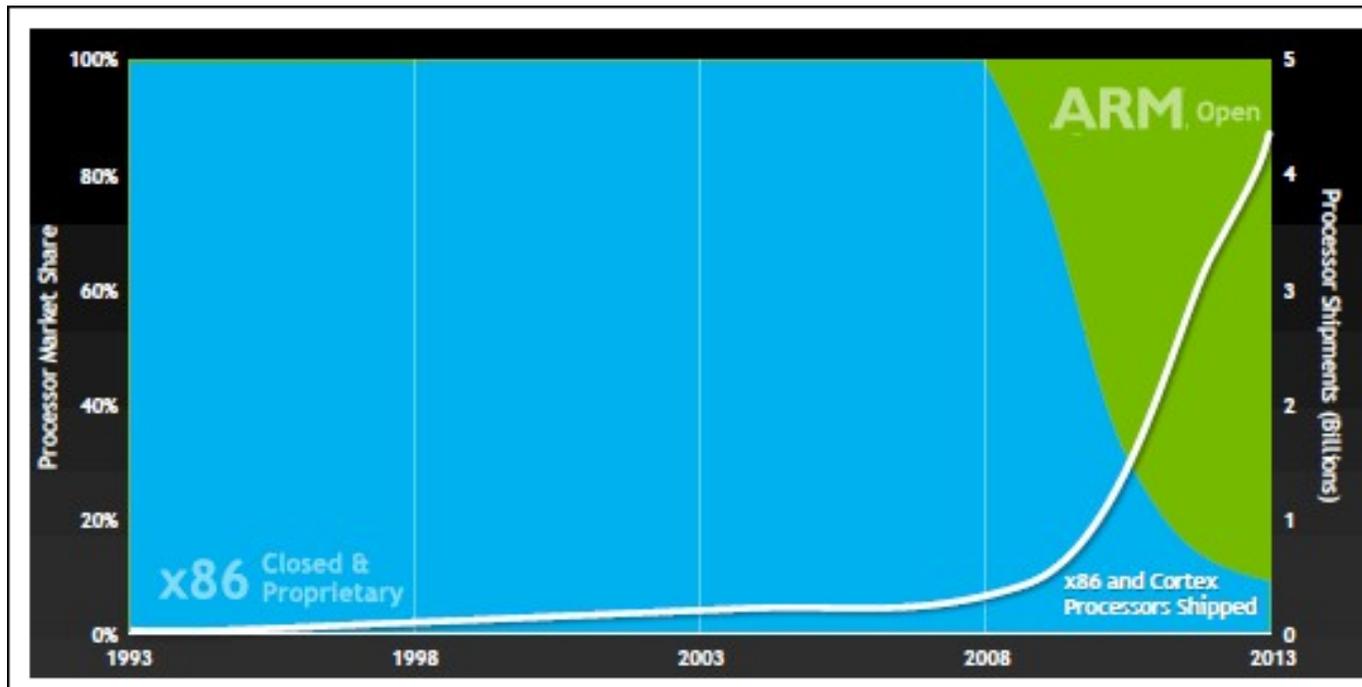

+ Vector vs Micro vs ARM based

■ Is history repeating?

+ ARM based processor shipment

7

- ARM based processors are shipped in billions of units
 - ARM licences the Intellectual Properties to manufactures
 - ...many manufactures
 - Samsung (Korea), MediaTek (China), Allwinner (China), Qualcomm (USA), NVIDIA (USA), RockChip (China), Freescale (USA), Texas Instruments (USA), HiSilicon(China), Xilinx (USA), Broadcom(USA), Apple(USA), Altera(USA), ST(EU) ,WanderMedia(Taiwan), Marvel(USA), AMD(USA)etc..

+ Ok, but then....an iPhone cluster?

8

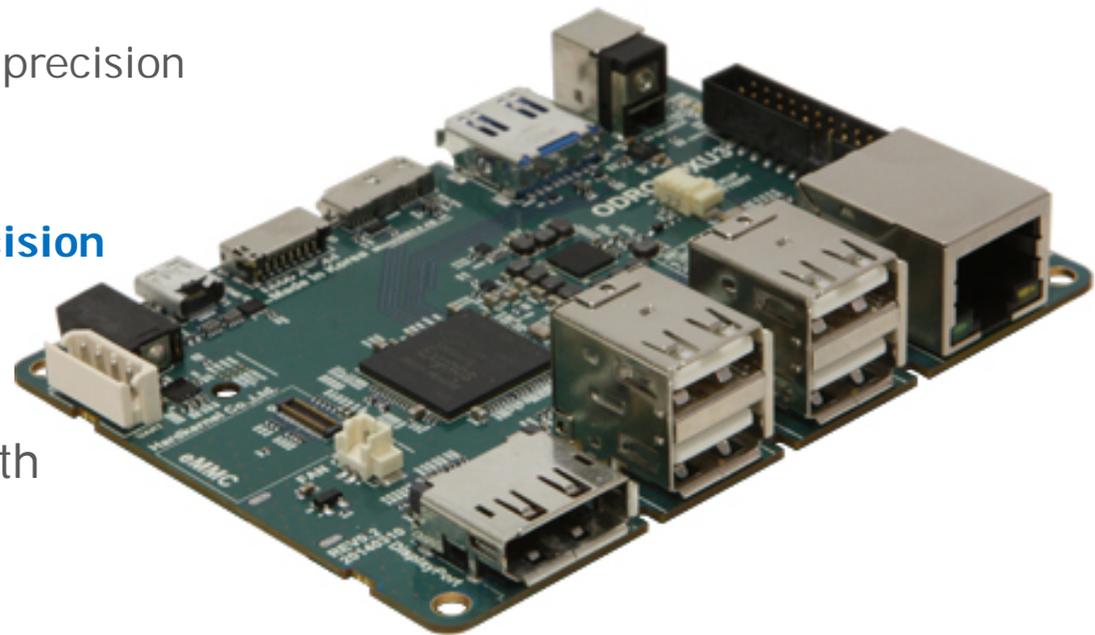

- NO, we are not thinking to build an iPhone cluster
- We want to use these processors in a standard computing center configuration
 - Rack mounted
 - Linux powered
 - Running scientific application mostly in a batch environment
- Use development board...

+ ODROID-XU3

9

- Powered by ARM® big.LITTLE™ technology, with a **Heterogeneous Multi-Processing (HMP)** solution
 - 4 core ARM A15 + 4 cores ARM A7
- Exynos 5422 by Samsung
 - ~ 20 GFLOPS peak (32bit) single precision
- **Mali- T628 MP6 GPU**
 - ~ **110 GFLOPS peak single precision**
- 2 GB RAM
- 2xUSB3.0, 2xUSB2.0, 1x10/100 eth
- Ubuntu 14.4
- HDMI 1.4 port
- 64 GB flash storage

Power consumption max ~ 15 W

Costs 150 euro!

+ Limitations

17

- Commodity SoCs and development boards have a number of limitations:
 - 32 bit
 - Small caches
 - Small RAM size in the boards (O(2GB))
 - However modern SoCs can address 40bit
 - No ECC memory
 - Frequent failures and system crashes
 - Slow connections (10/100Mb eth) in many cases
 - Ethernet via USB in same boards
 - HW bugs

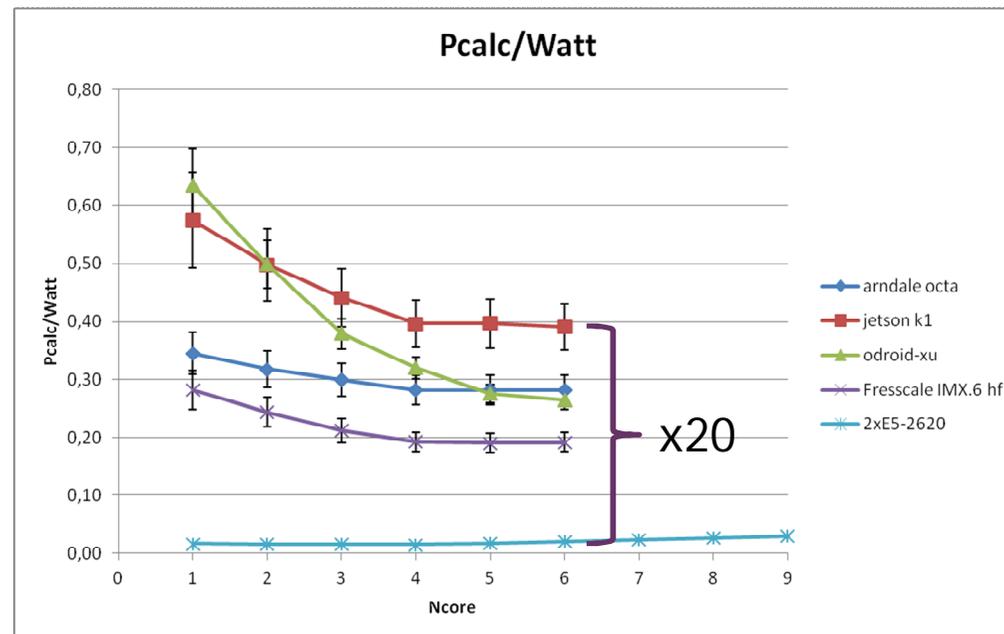

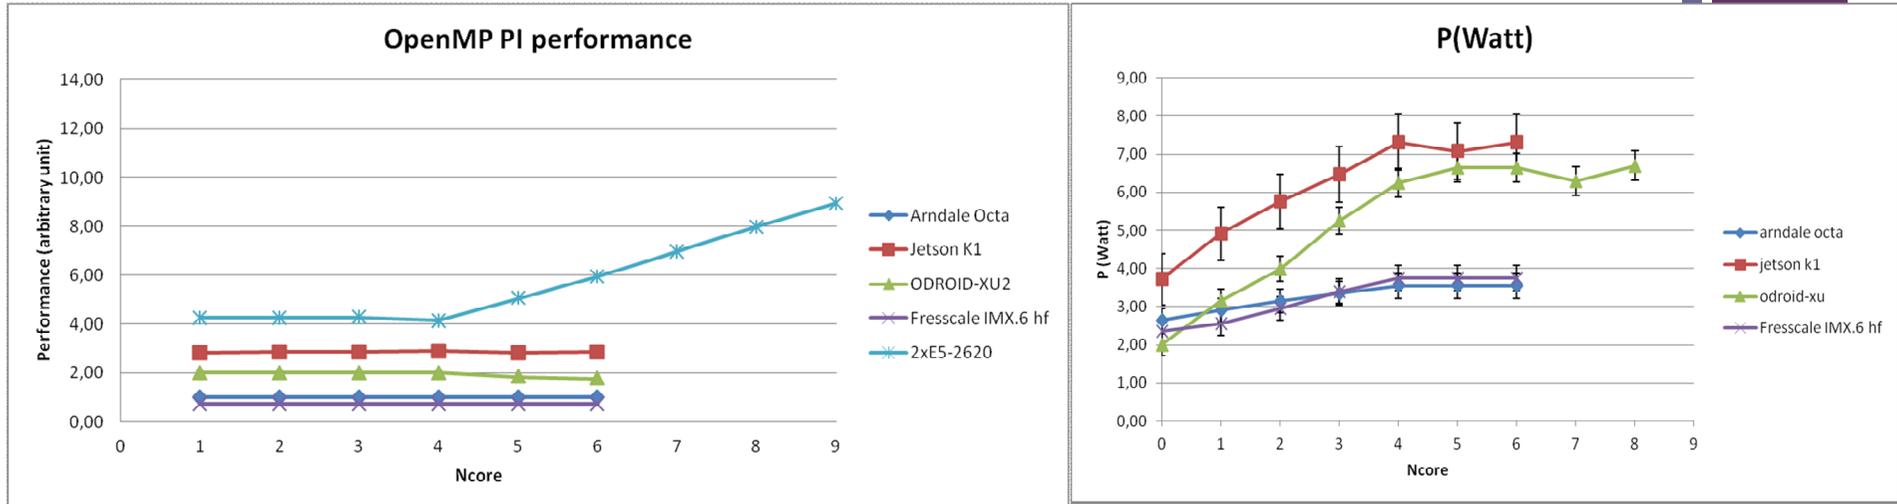

+ Gbit Ethernet

+ Only ARM based SoCs? And Intel?

- INTEL produce SoCs
 - Probably you have one in your laptop
- Some of them are low power
- Already 64bit
- Integrated GPU
 - CILK++ programmable
 - OpenCL programmable

+ Conclusion

32

- Mobile and embedded low power System-on-Chip are becoming attractive for scientific computing
 - In particular if you manage to extract power from the GPU
 - For selected applications
 - Image processing
 - No high RAM/RAM bandwidth requirements
- They still have many limitations for a production environment
 - 32bit, no ECC, bugs, system stability, etc..
 - (BUT we used development boards - not server grade machines)
- NVIDIA K1 in our tests was the most powerful ARM based SoC
 - Easy to install and use
 - Easy to port CUDA based applications
- Intel has interesting low power SoCs
 - Avoton has a high HS06/W ratio
- Looking forward to development boards based on 64bit SoCs with an ARM CPU on board
