

Pre-GDB Report: HTCondor at CERN

Iain Steers, Jérôme Belleman, Ulrich Schwickerath

Management & Accounting

Written a Python library that can interface with pool via the Python bindings.

Currently send job history to accounting db, and Elasticsearch/Kibana for our users. APEL publishing will come from the database.

Management of pool is done mainly via python, with our own automated workflows handling the dynamic resources infrastructure.

Current Status

What have we achieved so far?

- Ongoing discussions with ARC Information System developers regarding individual VOViews and VO specific job counts.
- All Grid items are at least PoC ready.
- Grid Pilot is open to ATLAS and CMS.
- First jobs from ATLAS rolling in, CMS shortly.
