

- There are no show stoppers.
- It works very well for single or multicore jobs.
- There is no standard config yet. Lot of 'do-it-yourself' needed, see:
 - https://www.gridpp.ac.uk/wiki/Example_Build_of_an_ARC/Condor_Cluster
- Runtime ENV
- Draining for multicore (defrag daemon or DrainBoss etc.)
- Accounting assignment
- Fair shares assignment

- Many security details
- Icmaps integration
- Power publishing and scaling
- Creation of LSC files
- Accounts
- Glexec
- Vomses
- Various custom libs, packages, files, directories
- Heterogeneous configs
- Server health scripts
