PBS Gridworks - efficient application scheduling on distributed platforms

Tuesday, 23 September 2008 11:20 (20 minutes)

PBS Gridworks is a suite of tools simplifying and automating the process of scheduling and managing compute workload across clusters, SMP and hybrid configurations. The talk describes the capabilities of the product and how it can be used in a production environment. Integration with vertical applications and interfaces to external services will also be discussed.

Presenter: KREBS, Jochen (Altair)

Session Classification: Business Track - Modelling and Simulation
