Advanced network services in EGEE-III

Wednesday, 24 September 2008 12:00 (30 minutes)

In EGEE-III the advanced network services task deals with Network SLAs which provide means to describe network specific guarantees across multiple domains.

In EGEE-II SLA installation and monitoring procedures have been defined and tested but specific mechanisms have to be developed in order to make these procedures more automatic and effective.

The steps that could make this aim a reality will be presented!
