

Connect. Communicate. Collaborate

GÉANT2 and the GRID

Domenico Vicinanza

DANTE

EGEE 08 Meeting, Istanbul 22-26 September 2008

AGENDA

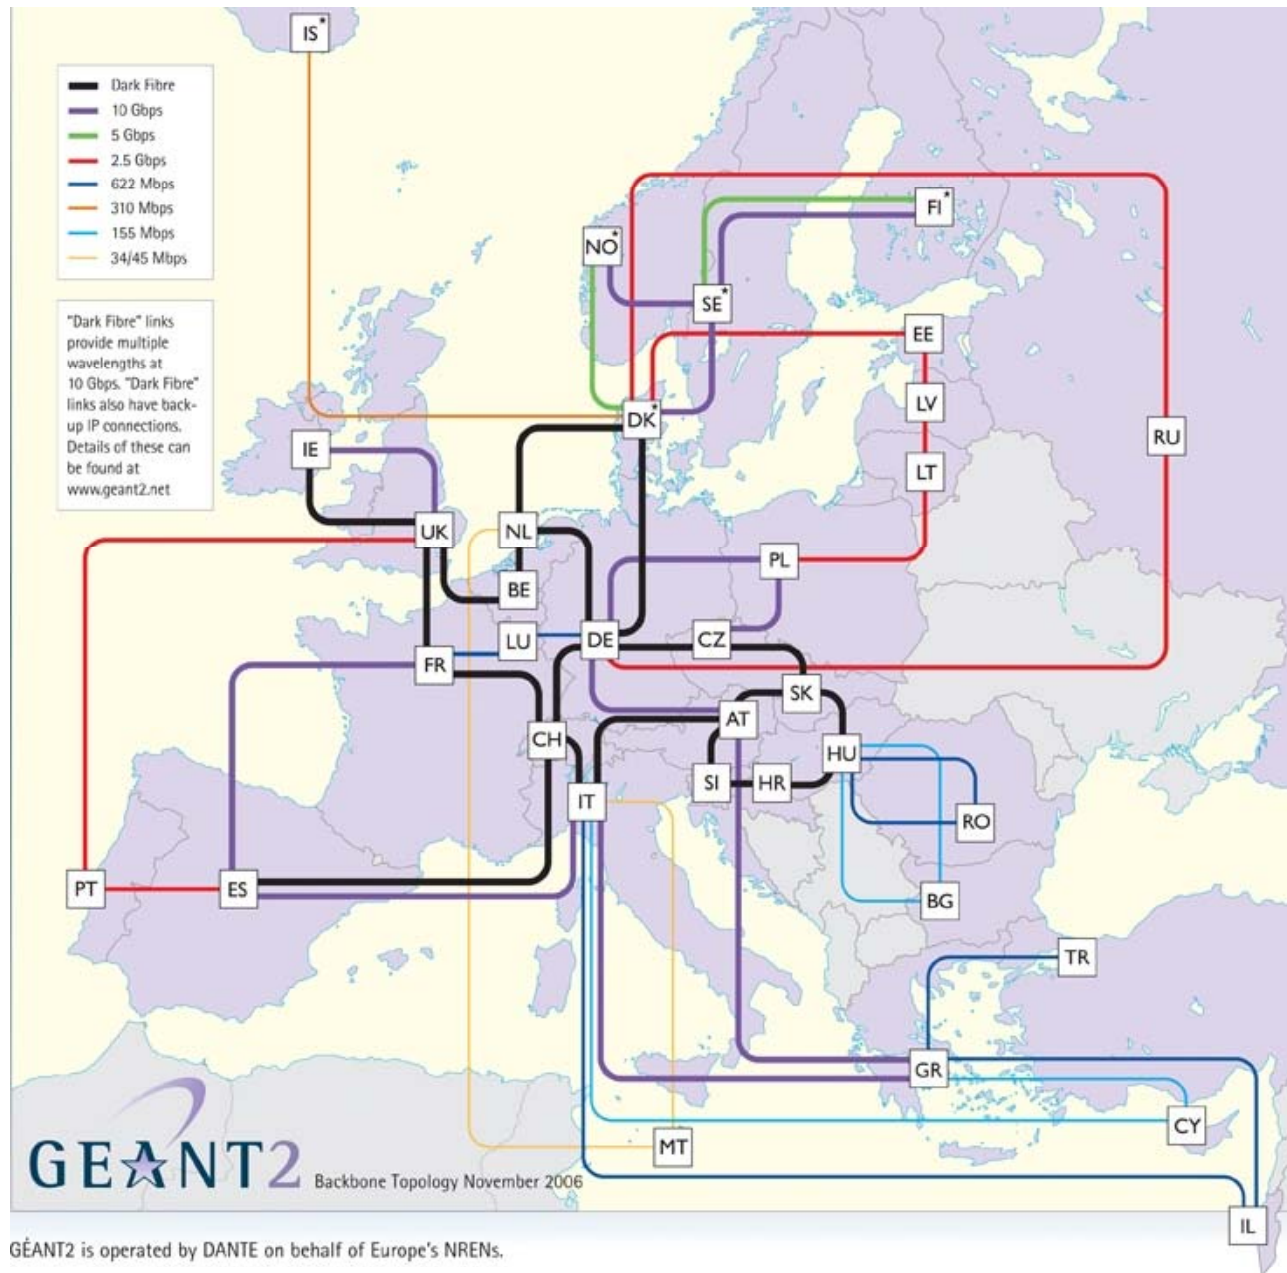

Connect. Communicate. Collaborate

- GÉANT2 Introduction
- Multi Domain Operations
 - AutoBahn
 - Multi Domain Monitoring: perfSONAR
 - E2E Mon
- Multi Domain Services Support and Monitoring
- Conclusions

Connect. Communicate. Collaborate

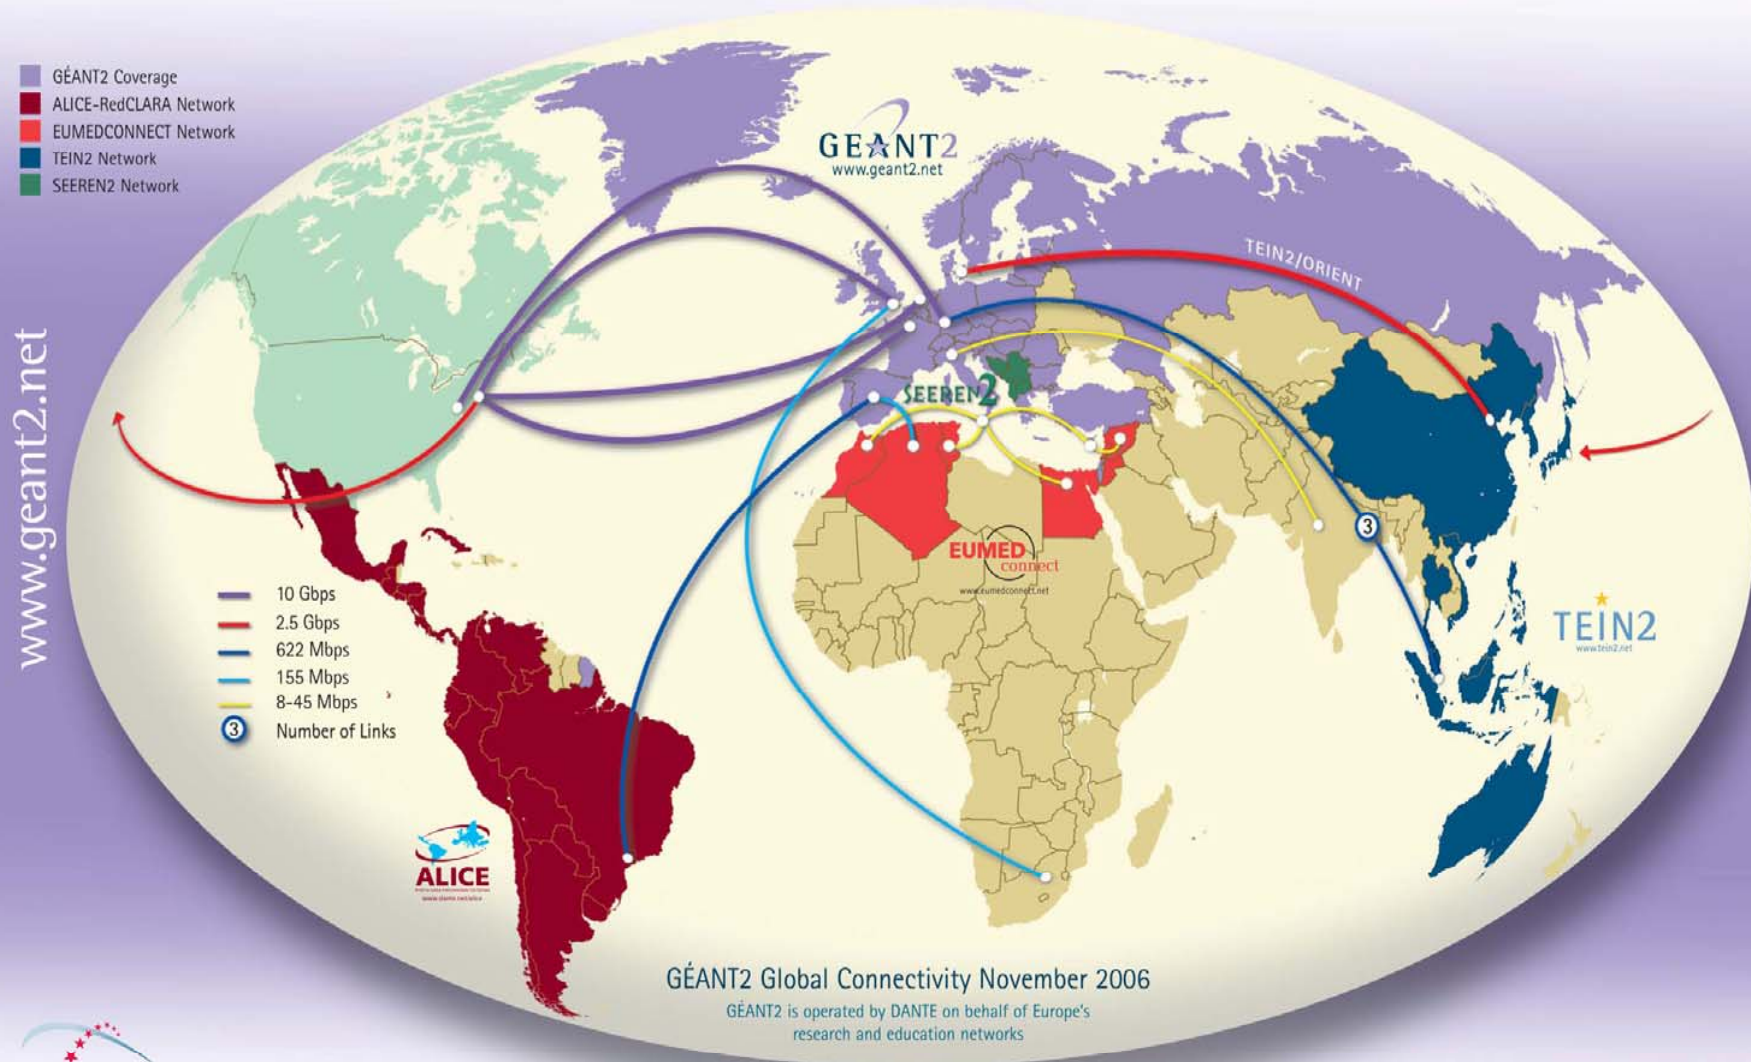

GÉANT2 Topology

GÉANT2 is operated by DANTE on behalf of Europe's NRENs.

GEANT2 At the Heart of Global Research Networking

GÉANT2 Vision

Connect. Communicate. Collaborate

- Enable physicists, astronomers and researchers around the world to share their resources, their data and their knowledge
- Provide the best possible network connectivity
 - High Quality, Tailor-Made, Affordable
- Different stakeholders working together to provide a quality service
 - that reaches the users!
- GÉANT2 is not just a backbone network!

What have we achieved?

Connect. Communicate. Collaborate

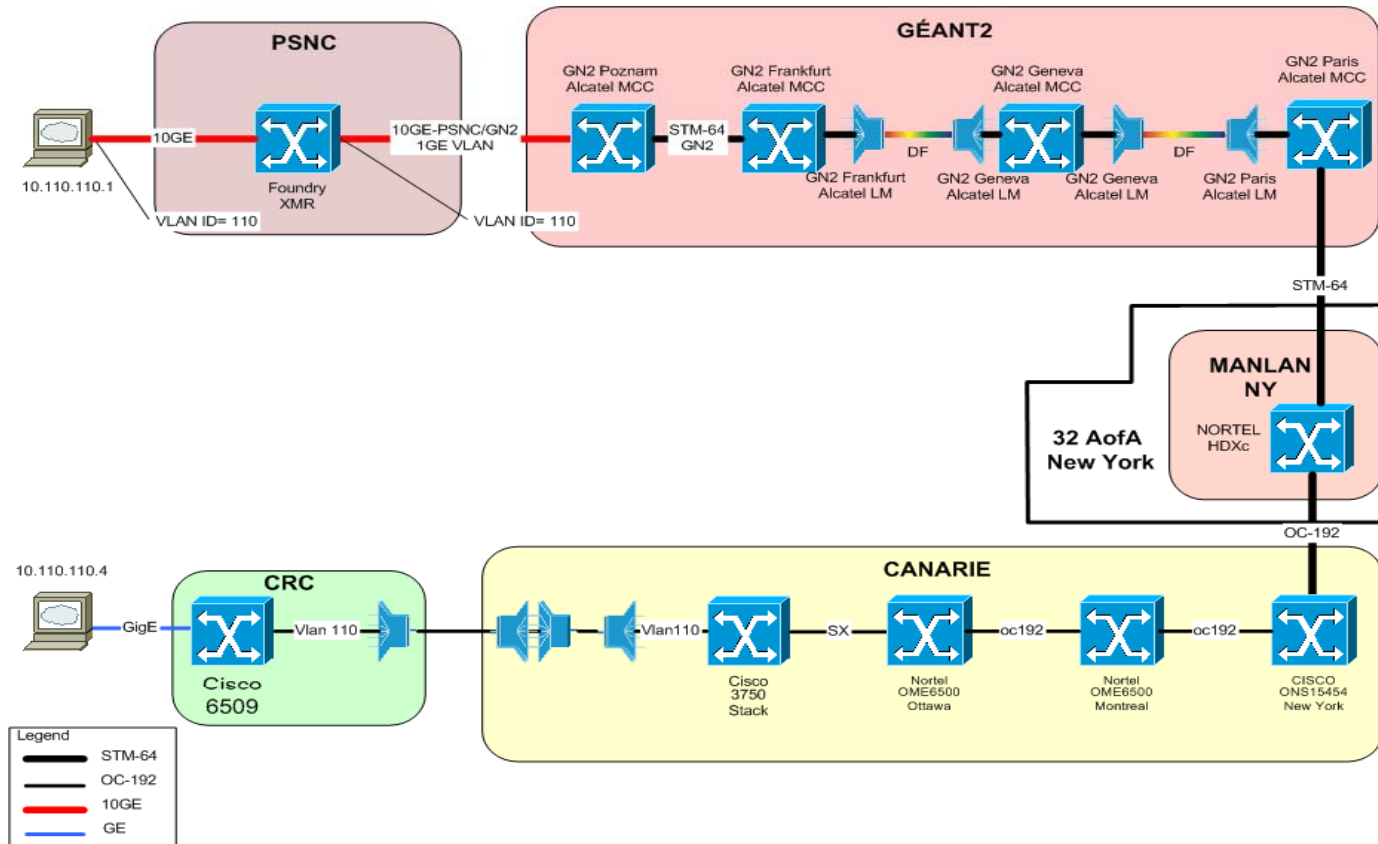

- Pan-European Hybrid networks
- Advanced IP services
- Lambda and circuit services
 - Since 2006 GÉANT2 provides pure wavelengths and GE circuits to interconnect NRENs across Europe
 - Currently ~50 point-to-point connections crossing Europe
 - More than 0.3 Tbps capacity dedicated to projects such as DEISA, LHCOPN, Express, Phosphorus
 - Aiming to provide these services across different world regions.

Phosphorus – CRC – PSNC

PHOSPHORUS PSNC-CANARIE
1GE Path setup

Lessons Learnt

Connect. Communicate. Collaborate

- Extra effort is required in order to set up the inter-domain parts of the connection: Multiple technologies
- Domain controlled tests are not always enough
- Domain controlled monitoring tools do not always help in the end-to-end connectivity supervision
- Each stakeholder has its own SLAs and business models
- How can we make sure that our operational model is scalable?

What do we need?: Multi Domain Operations

Connect. Communicate. Collaborate

- Several GÉANT2 activities are focused in supporting Multi Domain Operations
- Objective: Delivery and support of multi domain services as one 'virtual' domain from the end user point of view
- Challenges: Deliver a **complex** service packaged in an **simple** format at an **affordable** operational cost

Connect. Communicate. Collaborate

Multi-Domain Operations:

- Reducing operational costs
- IP services monitoring
- Lambda services monitoring

Multi Domain Operations-1: Reducing Operational Costs

Connect. Communicate. Collaborate

- Automated Provisioning of a service
 - AutoBahn
- Efficient Delivery of Service Levels guaranteed to the customers:
 - Ease fault detection and resolution
 - Monitoring: perfSONAR, E2EMon
 - Ease communication between stakeholders
 - i-Share
 - eduGAIN

Automated Bandwidth Reservation: AutoBahn

Connect. Communicate. Collaborate

- Demand for Ethernet Private Line circuits growing in GÉANT2
- Bandwidth on Demand could:
 - Improve the customer experience by providing circuit booking
 - Possible reduction in network operation overhead
- Solution:
 - AutoBahn (Automated Bandwidth Allocation across Heterogeneous Networks)

Connect. Communicate. Collaborate

AutoBahn

- Service architecture tailored to the needs of the multi-domain, multi-technology pan-European research and education community.
- On demand dedicated circuits
 - spanning multiple countries
 - multiple networks
 - administered by different entities
 - using different technologies.

Multi Domain Operations-2: Monitoring for IP services

Connect. Communicate. Collaborate

- Hardware and software distributed across Europe (within GÉANT2 network and the NRNs)
- It gives a global view of the network connectivity and performance
- Defined set of parameters:
 - One Way Delay
 - Bandwidth (BWCTL)
 - Link utilization, Link Status, errors, drops:
 - Cacti, RRD MA

Monitoring for IP services: perfSONAR MDM tool

Connect. Communicate. Collaborate

- GÉANT2 multi-domain monitoring (MDM) tool: perfSONAR
- Objective:
 - Correctly, efficiently and quickly identify network problems
 - Provide fast, reliable and uninterrupted network communication
 - Track issues across multiple domains
- Strategy:
 - cross-domain monitoring capability
 - access network performance metrics from across multiple domains
 - perform network monitoring actions in different network domains
 - network problems and performance bottlenecks can be traced and eliminated quickly
 - proactively identify and prevent problems before service disruption occurs

perfSONAR MDM: accessing network information across several domains

Connect. Communicate. Collaborate

perfSONAR is carried out by a consortium of organisations (GEANT 2, ESnet, Internet 2 and RNP)

perfSONAR aims at making it easier to solve end-to-end performance problems on paths crossing several networks.

Authorized users can have access to network performance for diagnosis and troubleshooting

Communicate. Collaborate

One Way Delay

Multi Domain Operations-3: End-to-End Network Monitoring

E2E Link Monitoring Goal

Connect. Communicate. Collaborate

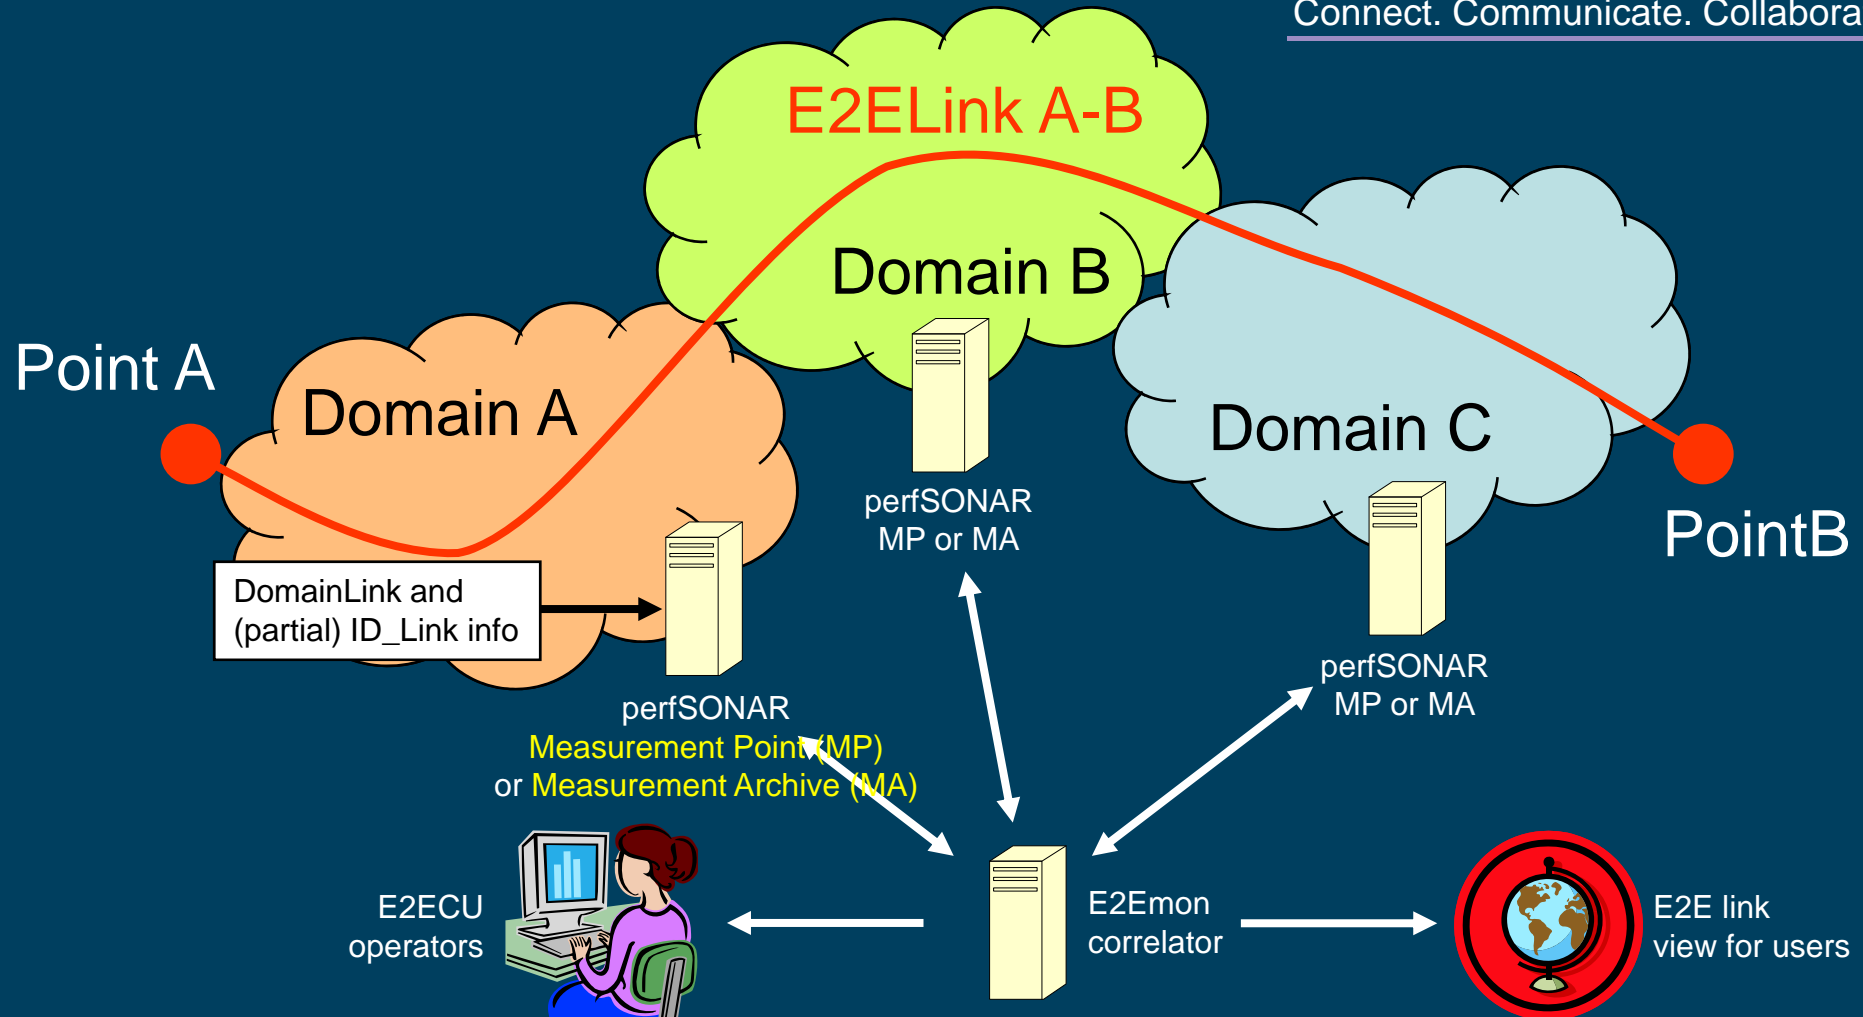

Goal: (near) real-time monitoring (link status) of constituent DomainLinks (and links between domains) and whole end-to-end Link A-B.

E2EMon Approach

Connect. Communicate. Collaborate

End-to-End Monitoring

Connect. Communicate. Collaborate

- Each domain installs software probes to capture up/down status of their links from network hardware
- This status info sent to PerfSONAR MP or MA:
 - Collecting network status info [UP / DOWN only]
 - Historical archive for network status info
 - Checks info and reformats into XML for collection by E2EMon
- E2E Monitoring System
 - Queries PerfSONAR MPs & MAs
 - Concatenates DLs & IDLs to form E2E Links

Nagios/Cacti Monitoring system

MDM

One Way
Delay

IP services
monitoring

- Multi-Domain Monitoring and IP services monitoring systems are installed on servers physically located in the network and put under constant monitoring
- This ensures that the Multi-Domain Monitoring activity is always looked after and proactive action can be successfully carried out

Connect. Communicate. Collaborate

MDM services monitoring

- MDM systems monitoring is performed using **Nagios/Cacti** (developing a customised set of probes and interfaces)
- DANTE Service Desk is currently checking MDM servers:
 - **Hardware layer**: CPU, MEM, disk space, network interfaces, TCP/UDP traffic
 - **Resource layer**: login attempts, Tomcat RRT, eXist RTT, MySQL, NTP
 - **Service layer**: MDM services availability and performance
- Additional tools:
 - **Syslog** server (with MySQL support)
 - security **log auditing** (with automatic report tools)
 - Google-map/Nagios integration

Liaising with other research networks

Connect. Communicate. Collaborate

Other research networks (Internet2, Esnet), together with GEANT2:

- Combined effort in the tools development and deployment
- Exchange of operational experiences

Common definition of services to users

Definition of global operational processes

Jointly address NOC requirements

Standardise user support

Conclusions

Connect. Communicate. Collaborate

- Multi-Domain Operations
 - Advanced network services (AutoBahn)
 - Multi-Domain Monitoring: perfSONAR
 - E2EMon
- The future: GEANT3
 - Extending the service portfolio to production quality
Multi-Domain hybrid networking

Connect. Communicate. Collaborate
