The gLite middleware distribution

Wednesday 24 September 2008 09:00 (45 minutes)

The gLite middleware distribution is one of the most visible products of the EGEE project and is found on all sites participating in the production infrastructure. Its purpose and features are described, along with a summary of the current status. The future environment to which gLite will have to adapt is discussed, and perspectives on its evolution are presented.

Presenter: KEEBLE, Oliver (CERN)

Session Classification: Technical Plenary
