HOPE Hospital Open software Platform for E-health Français

GRID-ENABLED COLLABORATIVE HEALTHCARE

Welcome to the HOPE portal, a collaborative telemedicine platform developed as part of the [LifeGrid](#) project.

Connexion

This portal will use [Grid technologies](#) to bring you the following features:

- Smart patient folders: securely **store, modify and search** the medical folders of your patients.
- Collaborative diagnosis: securely **interact and share access** to selected folders with experts to receive a **second diagnosis**.
- Monte Carlo dosimetry: Perform your **treatment planning** in a more **user-friendly and faster way** using [GATE](#).

- **Neurosurgery application:**
 - 2 sites in Clermont-Ferrand
 - 1 in University of Almeria
 - 1 in Ho Chi Minh City Institute of IT

- **Offer a set of different components for medicine purposes.**
 - Don't give a ready-to-use application
- **Ensure data security and keep privacy.**
 - Crucial in medical world
- **Let the data where they are produced**
 - Typically in hospitals or medical structures
- **Give access and take advantages of grid fonctionnalités, in terms of storage, computation and communication.**
 - Store medical data on the grid
 - Perform high CPU consuming calculation

- **What are the field of applications ?**
 - Medical physics
 - radiotherapy, brachytherapy treatments, nuclear medicine imaging
- **Who will use the platform ?**
 - Physicians
 - Medical physicists
 - Researchers
- **What type of data will be used ?**
 - DICOM Medical images
 - scanner
 - IRM
 - SPECT, PET scans
 - Standard images
- **What type of calculations will be done on the grid ?**
 - Monte Carlo calculations using GATE

- **Generic Metadata catalog**
 - Metadata management system on the grid
 - Security management

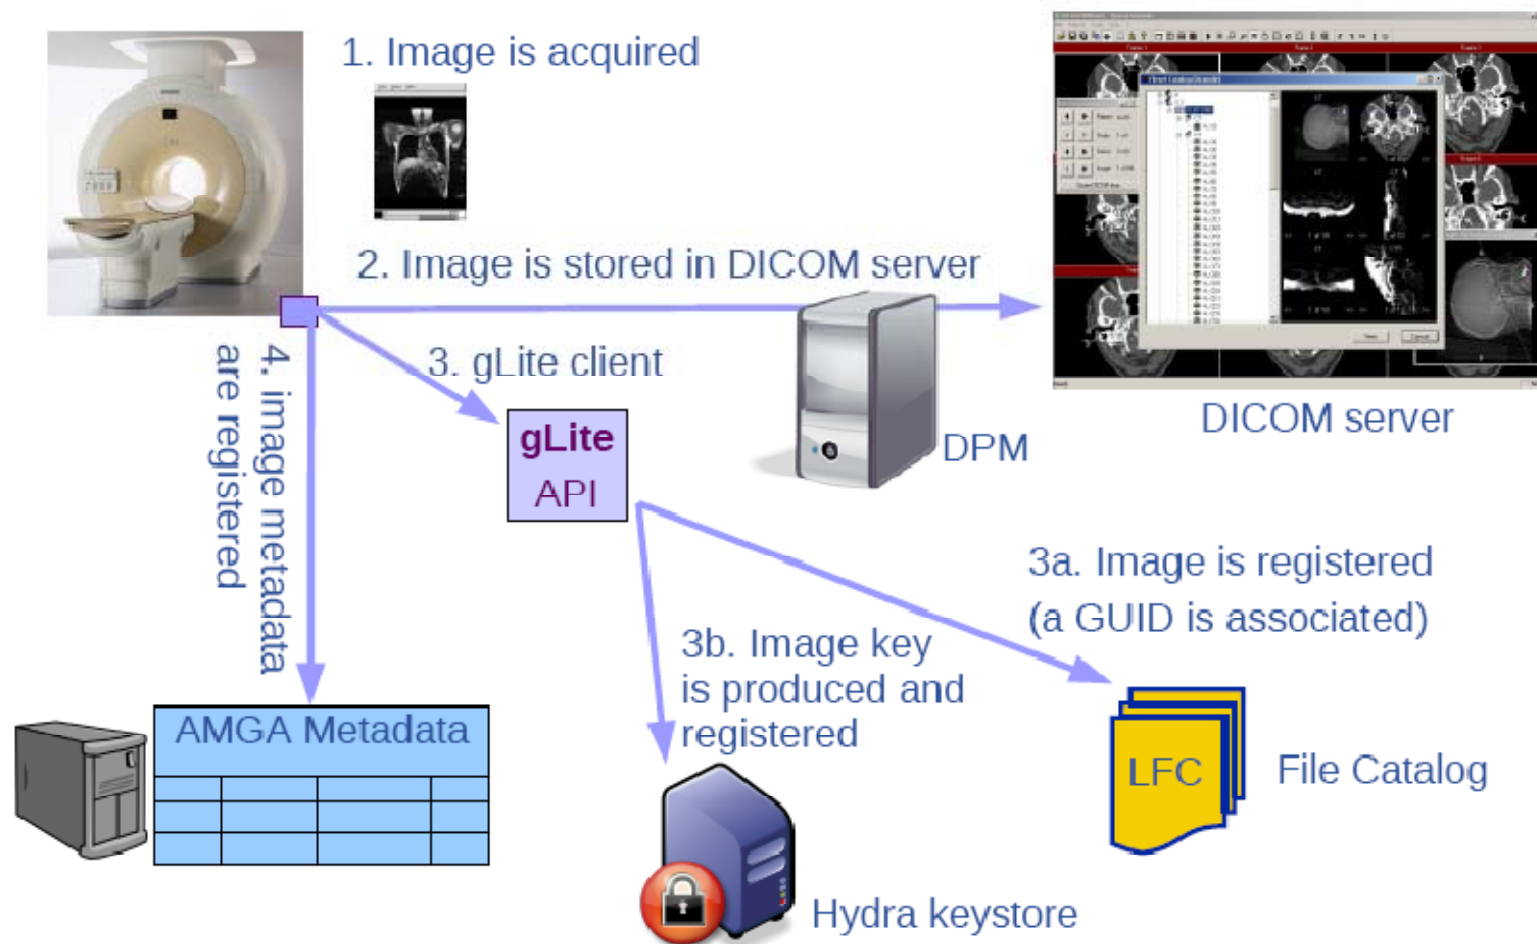

- **Layer on top of other databases**
 - Common interface
 - Data base backend independence

- **For our platform: handle “textual” information**
 - Patients sheets
 - DICOM images metadata

- **Management of Medical Images from PACS to the grid**
 - Integration in the next months of MDM (Medical Data Management) from the gLite project:
 - Direct access of dicom images through the hospital network
 - Images are available directly by the grid with LFC but stay in the hospital.
 - Encryption and anonymisation on the fly with gLite-Hydra key server
 - Rights management with grid certificates

EGEE Hospital medical images access

Enabling Grids for E-scienceE

- **Access for physicians**
 - Smart-card based authentication
- **Hospital medical images**
 - Integration of :
 - MDM
 - Hydra
 - PDM
- **Job management**
 - Use of the WISDOM production environment for a faster and more reliable link to the grid.
- **Add a research-oriented submission of Gate simulations:**
 - Customization of the interface
- **Automatic split in several job the simulation**
 - Optimize the number of jobs to make it as shortest as possible

macro

Macro

CCA

Nominal Activity: 13.0 MBq
Diameter: 15.5mm
Height: 3.3mm
Radius: 12mm
Number of eyes: 2
Angle between eyes: 90°

CCB

Nominal Activity: 18.5 MBq
Diameter: 20.0mm
Height: 5.5mm
Radius: 12mm
Number of eyes: 2
Angle between eyes: 90°

CCX

Nominal Activity: 9.3 MBq
Diameter: 11.5mm
Height: 2.3mm
Radius: 12mm
Number of eyes: 2
Angle between eyes: 90°

CCZ

Nominal Activity: 18.5 MBq
Diameter: 20.0mm
Height: 5.5mm
Radius: 12mm
Number of eyes: 2
Angle between eyes: 90°
