Data flow management with MOTEUR on the EGEE grid

Wednesday 24 September 2008 16:00 (20 minutes)

This talk will describe the MOTEUR workflow manager and illustrate its capability to handle complex application data flows through several examples. MOTEUR is a service-oriented gLite-interfaced workflow manager which adopts a data-flow centric approach to describe application pipelines in an accessible visual interface with a rich and compact application logic description framework.
