

Exclusive diffraction - discussion topics

- Anomalous couplings - what is the reach without tagged protons?
- Diphoton production/anomalous couplings - can something be done with heavy ion collisions?
- Background tuning for invisible searches?
- Special runs - when are these needed/preferable for exclusive measurements?
- Separating different ingredients for KMR model (survival probability, unintegrated gluon...). What measurements are most useful?
- Survival probability - more differential tests? In photon induced processes?
- Better ways to deal with/model proton dissociation?
- Survival probability calculated consistently?
