

YAIM

DPM Workshop, Napoli

David Smith on behalf of IT-SDC

9 October 2014

YAIM

- Currently released version is 4.2.20
 - Some known issues:
 - If used with xrootd4, the logrotate will not work
 - https not added to proto list in /etc/shift.conf on the headnode
- But no more changes planned, no centos7 port
- dpm-yaim package will **not** be removed from the EMI repository

YAIM

- Puppet already supports some configuration which yaim does not and this will increase over time
 - dmlite memcache configuration
 - some of the apache configuration
- In case of support questions the (first) suggestion will likely be to use puppet instead
- If more changes are wanted in YAIM perhaps it could become a DPM collaboration wide responsibility
