Discrete Glimpses of the Physics Landscape after the Higgs Discovery

Tuesday, 2 December 2014 09:15 (45 minutes)

The discovery of a Higgs boson at the LHC raises (almost) as many questions as it answers. Is it an elementary particle, or composite? Are there other Higgs bosons? Is the vacuum stable? Are there other particles at the TeV scale waiting to be discovered at the LHC or in dark matter experiments? This talk will answer none of these questions.
