## S3 and Q6 as flavour symmetries in multi-Higgs models

*Thursday 4 December 2014 19:05 (30 minutes)*

We present an overview of the flavour groups  $S_3$  and  $Q_6$  in models with an extended Higgs sector. We extend the  $S_3$  results to  $SU(5)$  Grand Unified theories with  $Q_6$  as flavour group. We find the generic form of the mass matrices both in the quark and lepton sectors, which are consistent with experimental data. We reproduce, according to current data, the mixing in the CKM matrix. In the leptonic sector, the neutrino mixing angles are also found, in good agreement with experimental data.
