

DISCRETE 2014: Fourth Symposium on Prospects in the Physics of Discrete Symmetries

Contribution ID: 40

Type: **not specified**

Recent results from ALICE and future prospects

Thursday, 4 December 2014 17:30 (30 minutes)

During the first LHC run the ALICE experiment collected data from pp, p-Pb and Pb-Pb collision systems. A selection of recent results will be presented, including those which focus on characterisation of the deconfined system formed in heavy-ion collisions. The future prospects for Run 2 and for the upgrade of ALICE beyond that will also be discussed.
