- On-Peak, both top and New Physics contributions are insensitive to the mass scale in the loop.

$$\sigma_{gg \rightarrow h}^{\text{on-peak}} \sim |\kappa_t A_t(m_h^2) + \kappa_{gg} A_t(m_h^2)|^2$$

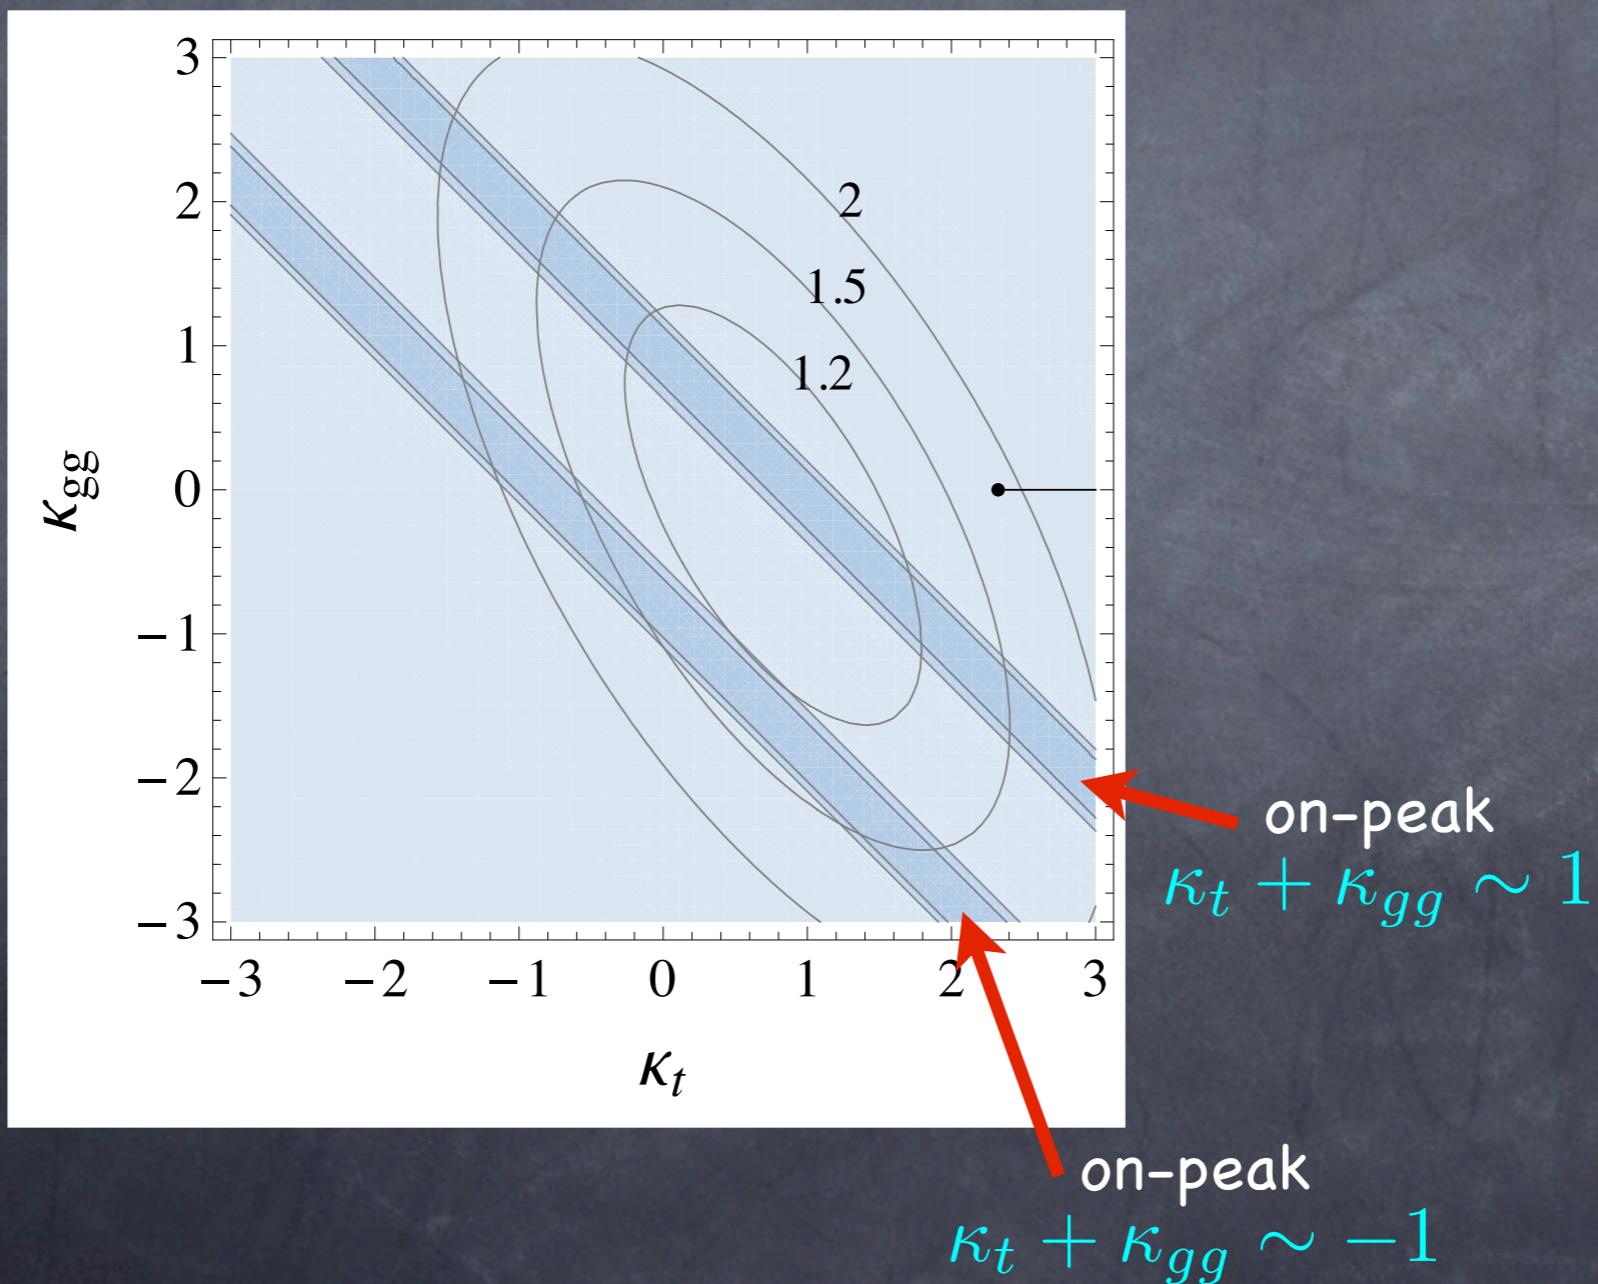

- Off-shell, above the $t\bar{t}$ threshold, the top loop is resolved!
- If the New Physics is heavy enough (0.5 - 1 TeV), the NPh loop may NOT be resolved.

$$\sigma_{gg \rightarrow h}^{\text{off-peak}}(\hat{s}) \sim |\kappa_t A_t(\hat{s}) + \kappa_{gg} A_t(m_h^2)|^2$$

$$\sigma_{gg \rightarrow h}^{\text{on-peak}} \sim |\kappa_t A_t(m_h^2) + \kappa_{gg} A_t(m_h^2)|^2$$

G.Cacciapaglia, A.Deandrea, et al
0901.0927, 1210.8120

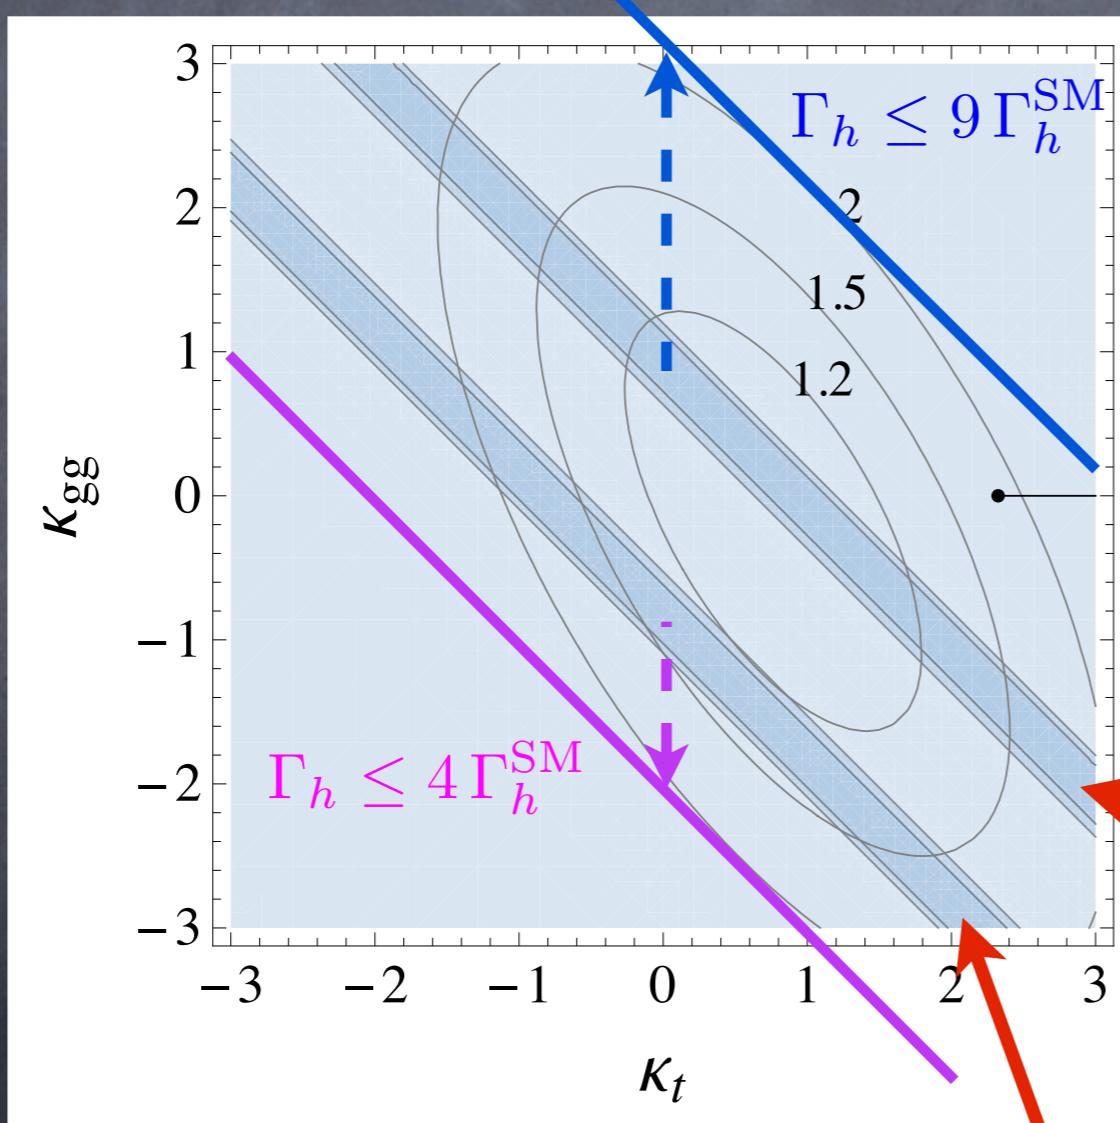

$$\sigma_{gg \rightarrow h}^{\text{off-peak}}(\hat{s}) \sim |\kappa_t A_t(\hat{s}) + \kappa_{gg} A_t(m_h^2)|^2$$

$$\sigma_{gg \rightarrow h}^{\text{on-peak}} \sim |\kappa_t A_t(m_h^2) + \kappa_{gg} A_t(m_h^2)|^2$$

$$\sigma_{gg \rightarrow h}^{\text{off-peak}}(\hat{s}) \sim |\kappa_t A_t(\hat{s}) + \kappa_{gg} A_t(m_h^2)|^2$$

$$\kappa' s \leftrightarrow \Gamma_h \quad \text{degeneracy}$$

$$\kappa_x \rightarrow \xi \kappa_x \quad \Gamma_h \rightarrow \xi^4 \Gamma_h$$

**More solid bound
on the width!**

on-peak
 $\kappa_t + \kappa_{gg} \sim 1$

on-peak
 $\kappa_t + \kappa_{gg} \sim -1$

To further validate:

- Verify the approximation of “heavy New Physics”: accuracy as a function of the NPh mass scale.

Fiducial cross-section
before the MELA discriminant.
