

SUSY 2015, 23rd International Conference on Supersymmetry and
Unification of Fundamental Interactions

Contribution ID: 284

Type: **not specified**

Higgs, flavor at the high p_T frontier, top, and FCNC

Thursday 27 August 2015 14:00 (25 minutes)

The top quark pairs at Tevatron are produced mainly through proton anti-proton interaction. The asymmetry of this production is intriguing. The search for new physics beyond the Standard Model is on going using CDF RUN II data. The latest results of top quark production asymmetry, searching for Fermiophobic Higgs and FCNC will be given at the conference.

Primary author: Dr CHEN, Andrew (U. of Michigan)

Presenter: Dr CHEN, Andrew (U. of Michigan)

Session Classification: Flavor Violation

Track Classification: Flavor Violation Theory and Experiment
