Advances in smooth heterotic string theory

Thursday 27 August 2015 14:00 (30 minutes)

I will give a brief summary of the status of the heterotic approach to string phenomenology. I will begin by giving a broad-brush overview of what has and has not been achieved in this field. I will then describe two recent pieces of work on smooth heterotic compactifications to indicate the type of progress which is currently being made.

Presenter: GRAY, james (Virginia Tech)

Session Classification: SUSY/String Models
