The Search for Dark Matter: Current Status and Future Prospects

Monday 24 August 2015 12:00 (30 minutes)

Dark matter constitutes nearly 85% of the matter in the Universe, and yet we know very little of its fundamental properties. There are currently a wide array of searches for this missing matter—ranging from collider to direct and indirect detection experiments. I will review the current status of these searches and discuss the implications for theories of dark matter.
