

BG5 - Research data management services: what needs to be developed in the future?

Thursday, 18 June 2015 16:00 (1h 45m)

Discussion on the management of research data doesn't have to break out, it already has. However, every institution has different needs and usually applies its own strategy. In this context, this breakout session seeks to further break out on RDM services by addressing questions such as: What services are already in place? What feedback can be collected from their users? What are the needs for new services in the future? What will they look like? If you have RDM services in your institution or plan to develop some, just drop by to share your thoughts on the topic.

Presenter: Mrs BLUMER, Eliane (UNIGE)

Session Classification: Breakout Groups
