# University-based open access publishing in Europe: challenges and opportunities in the Humanities

Victoria Tsoukala, PhD  
National Documentation Centre | National Hellenic  
Research Foundation

# What distinguishes the Humanities scholarly communication process

- Slower pace in producing publications
- Heavy reliance on books
- Transition from print to electronic much slower
- Heavy use of local publications, reliance on local languages
- Impact more difficult to measure in the Humanities, different value system
- Less or minimal connection of results to monetary economy and much less funding available
- Slower uptake of open access
  - But sweeping recent massive developments
- Most open access institutional initiatives focus on the SSH

# A rich OA publishing landscape around the ivory tower

# Traits of University-based initiatives

- Initiatives tightly interwoven with open access
- Library initiatives
- Focus on journals, increasingly on monographs
- Open source technology (OJS)
- Institutional funding and/or own resources
- No business models, especially with journal publishing
  - Journals usually outside of the APC system

# Some typical examples

- Library-led initiatives at institutional level
  - Numerous large ones in Italy (Trieste), Spain (Madrid), medium ones all over Europe
  - Mostly journals
- Open access university presses within the library (library upress merge or new presses in library)
  - UCL press
  - Goettingen Press
  - Stockholm Press, among others

# Opportunities

- To **regain control of the valuation and dissemination** of the scientific information it produces (university and researchers)
- For **innovative experimentation** in open access publishing and open science (researchers, university)
- Actively to participate in shaping an **economically more transparent and fair SC system** and reap benefits (university)
- To **expand standard and set rules for professional evaluation and advancement** (Universities/administration)
- **Assume new and enhanced roles** in the university system (libraries)

# Challenges

- **Lack of systematization** in a good part of efforts
- **Fragmentation:** lack of concerted action and systematization across Europe
  - Lack of shared standards, guidelines and practices; business and financing models; possible general lack of collective vision
- **Inability to acquire critical mass**, become visible, usable and attain sustainability
- **Perceived less quality and trust** and thus, less chances to become established (=acquire prestige status) and enter 'systemic' publishing

# Need to step up!

- Coordination at the European level (critical mass, shared infrastructure and services, good practices, develop shared knowledge-base and standards, measurable quality, acquire more funding, experiment more)
- More research for evidence on practices, on numbers, on economics necessary
- Involve the researchers and university administration more

# Our work at EKT!

a. <http://epublishing.ekt.gr>

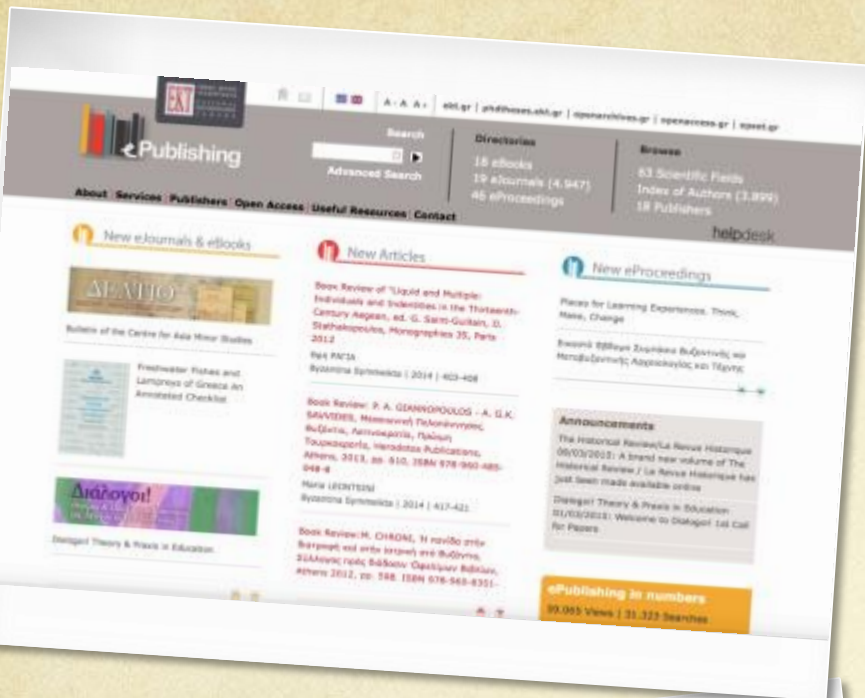

- a. Oa publishing service for Greek publishers
- b. 19 journals, books and proceedings (peer-reviewed)

b. <http://www.grissh.gr>

- a. Greek Reference Index in the Humanities (GRISSH)
- b. Ca 87 journals/85 publishers, documentation at article level, access to licensed content

c. Open Book Press Pilot

- a. ePress for select publishers, launch October 2015 with five monographs

Thank you!
