From ISOLDE to ISOLDE 2

Wednesday, 17 December 2014 09:15 (30 minutes)

On December 17, 1964 the CERN DG, Victor Weisskopf, sent a letter to the ISOLDE Collaboration giving green light to perform experiments at CERN. An underground hall was built close to the SC, which accelerated protons to 600MeV energy. The first experiment at ISOLDE was performed on September 17, 1967. In my talk I shall cover the first years of experiments at ISOLDE at CERN, the SC Improvement Programme and the building of ISOLDE 2.
