Parity odd CMB power spectrum via helical magnetic field.

Tuesday, December 15, 2015 5:15 PM (3 minutes)

In this work we compute the temperature-polarization correlations ($C_l(TB)$ and $C_l(EB)$) in the cosmic microwave background (CMB) generated by the presence of causal primordial magnetic fields with a helical contribution.

We analyze the effect of an infrared cutoff in the power spectrum of causal fields on the cross-correlation and we compare our result with previous work.
