

gstat (?)

Markus Schulz

gstat

- No longer well supported
 - Still running
- glue-validator covers the validation of contents
- Browsing and visualization of the info system is still useful
 - especially the ability to see the history
 - useful for the site manager to get some insight on the operation of the local site
- A reduced gstat could be run for every site BDII
 - Browser and hist for the site
 - Top level just a federation of the site level gstat system.
 - would require development effort

Conclusion

- gstat is no longer mission critical
 - validation done by glue-validator
- Some possible use as a ldap browser with history
- No effort should be invested in Gstat before we understand the the long term role of the information system in WLCG
