Jet measurements in p+Pb and Pb+Pb with the ATLAS Experiment at the LHC

Saturday 6 December 2014 14:30 (20 minutes)

Jets provide a powerful tool for probing the dynamics of the quark-gluon plasma created in Pb+Pb collisions at the LHC. The modification of high- p_T jets as they propagate in the quark-gluon plasma provides insight on structure of the plasma at short-length scale. Such modifications have been observed in a variety of measurements of single jet, dijet, photon-jet and charged-particle fragmentation functions. Recent results of jet modifications in proton-lead and Pb+Pb collisions will be presented.

Presenter: STEINBERG, Peter Alan (Brookhaven National Laboratory (US))

Session Classification: Saturday PM-1
