ownCloud project at CNRS

Tuesday 18 November 2014 08:00 (15 minutes)

CNRS will launch next November an ownCloud based service with the intend to serve CNRS research units. The first step is to deploy this service as a beta solution for 2 months and 2 000 end users, and then to generalize this offer to the whole CNRS users (potentialy 100 000 users).

Our platform is based on ownCloud 7 community edition, with VMWare for virtualization, a Galera/MariaDB cluster database and Scality for the distributed storage backend.

We will try to present during this workshop our service implementation in detail, and discuss about our choices, our concerns, ⋯our troubles :)
