

SURFdrive, a sync and share service for Dutch higher education and research

Tuesday 18 November 2014 08:20 (15 minutes)

During the first three months of this year we have setup an Owncloud-based sync and share service for Dutch higher education and research. This service uses a SAML2-based federated login. In this presentation we will discuss the requirements, choices we have made, tests we have done, the technical setup and the experiences we have had so far not only with the software and our setup but also setting up this service.
