Workshop on QCD and diffraction at the LHC
LHC Forward Physics WG meeting, December 15-17 2014

Contents:

- LHCC: special runs for 2015
- Yellow report
- Next meetings

News

- **LHCC meeting:** Following our presentations at the opened and closed sessions, discussions about low lumi special runs next year: one “short” week at low lumi (2 days to setup, 1 day for total cross section, rest for low lumi/ low pile up ($\mu \sim 0.1$) measurements, in addition to LHCf dedicated runs and heavy ion ones of course)
- **Yellow report status**
 - Yellow report to be submitted by the next LHCC meeting (March 4 and 5)
 - Yellow report 1st version almost complete: only 2-3 contributions still pending as well as introduction (main physics motivations and beam/pile up/luminosity needed) and conclusion, see: http://www-d0.fnal.gov/Run2Physics/qcd/loi_atlas/fpwg_yellow_report.pdf
 - Discussions about the YR at this meeting on Wed.
 - Internal referees have been found for each chapter and everybody else is of course welcome to send comments and suggestions by Jan. 15
- **Next meetings:**
 - January 27-28, CERN: discuss referee comments
 - April 21 to 25: Madrid
 - Additional meeting in Autumn (3 per year)
 - Following the LHCC/LPCC recommendations, we will keep the LHC Forward Physics WG meetings as a forum to discuss forward physics between the different LHC experiments and the theorists with 3 meetings per year (2 at CERN and 1 outside)
