Civil engineering and geology

Thursday, 26 March 2015 08:30 (20 minutes)

Abstract title

The feasibility of an 80 km-100 km tunnel to house the Future Circular Colliders (FCC) is currently under investigation at CERN. This presentation describes how CERN's civil engineering team are investigating the optimal position for such a new machine in the Geneva area. The first results from a bespoke interactive tool, containing a 3D geological model of the Geneva basin, are presented.

Presenter: OSBORNE, John Andrew (CERN)

Session Classification: Infrastructure & Operation
