Twist-3 spin observables for single-hadron production in DIS

Wednesday 29 April 2015 11:35 (20 minutes)

In this talk we will address new theoretical work on twist-3 spin asymmetries for the process $l + N \rightarrow h + X$, for which recent data have been obtained. Specifically, we will address the longitudinal-transverse double-spin asymmetry A_{LT} , and the transverse single-spin asymmetry A_N for a polarized final state hyperon. Open questions and future prospects will be mentioned as well.
