

# Introduction to Particle Physics (for non physics students)

## 4. UNIFIED UNIVERSE

(no strings attached)

*PROFESSOR FRANK CLOSE  
EXETER COLLEGE  
UNIVERSITY OF OXFORD*

# FORCES Summary

(remember that waves  $\leftrightarrow$  particles)

| NAME            | action  | CARRIER                       |
|-----------------|---|-------------------------------|
| Gravity         | keeps us on ground  | graviton ?                    |
| Electromagnetic | electrons in atoms<br>solids<br>stops us falling to centre of Earth | photon ( $\gamma$ )           |
| Weak            | $\beta$ -radioactivity<br>$p \rightarrow He$ in Sun                 | $W^+$ $W^-$ $Z^0$             |
| Strong          | quarks glued inside $p, n \dots$<br>$p, n$ in nuclei                | gluons ( $g$ )<br>8 different |

Only the weak force carriers have MASSES

$$M_W \sim 80 \text{ GeV}/c^2$$

$$M_Z \sim 91 \text{ GeV}/c^2$$

Feynman rules:

If energy  $E$  flows through  
 the transmitted "virtual"  
 particle (photon;  $Z$ )  
 it costs  $1/(E^2 + M^2)$

If  $E \gg M$  the cost is  $1/E^2$ ....like the case of the photon

Only appears weak at low energy. Unified at high energy

At the heart of the Sun:

**WEAK**

**STRONG**

Net result:

$\Delta E = \Delta M c^2: {}^4\text{He} + 4p \approx 28\text{MeV}$

At the heart of the Sun:

Net result:

$\Delta E = \Delta M c^2: {}^4\text{He} + 4p \approx 28\text{MeV}$

**WEAK**

**STRONG**

→ why sun has shone for 5 Byr...  
→ Intelligent life developed

**The weak force is feeble in the Sun ..**

**..because  $10,000,000\text{K} \sim 1 \text{ keV} \ll 80 \text{ GeV}$**

**...this is why the sun has stayed active long enough for us to have evolved and be having this conversation.**

**→ We exist because  $m(W)$  is not zero**

**→ Mass matters**

# Big Bang $\rightarrow$ $e + p$

Thermal Equilibrium:

Temperature (energy) drops  $\rightarrow$   
After 1  $\mu$ sec  $\rightarrow$  one way only:

But at the same time:

then like processes 2 and 3 in the Sun\* until all the **neutrons** have gone

\* MAKING  
**Helium**

or

particles so far apart in the expanding universe that they no longer interact

$T = 1 \mu\text{sec}$  after BIG BANG

neutrinos are free  
( "the first fossils in the Universe)

move at high speed  
and if they have mass they  
start clustering together  
→ contribute to formation of galaxies

Billion  $\nu$  per atom  
⇒ if  $m(\nu) > m(\text{proton})/10^9 \approx 1 \text{ eV}$   
they will dominate mass  
density of the Universe

⇒  $m_\nu$  big question  
for future of universe  
and its formation

Universe expands - and cools  
expansion rate

Rate depends on pressure  
which depends on the  
temperature in the gas and  
the number of neutrinos inside  
the gas volume (density)  
and this # depends on  
number of neutrino species

$T = 3$  minutes after BIG BANG

75% protons

24% Helium Nuclei

+ small amount of deuterons  
+ free electrons.

Helium abundance<sup>\*</sup>; +traces of other light elements

depends on expansion rate of the Universe which depends on number of neutrino species

Deuterium abundance

depends on density of "ordinary matter" in the Universe.

$T = 3$  minutes after BIG BANG

75% protons

24% Helium Nuclei

+ small amount of deuterons  
+ free electrons.

Helium abundance<sup>\*</sup>; +traces of other light elements

depends on expansion rate of the Universe which depends on number of neutrino species

Deuterium abundance

depends on density of "ordinary matter" in the Universe.

$T = 3$  minutes after BIG BANG

75% protons

24% Helium Nuclei

+ small amount of deuterons  
+ free electrons.

if 3  $\nu$  species  
Helium abundance<sup>\*</sup>; +traces of other light elements  
depends on expansion rate of the Universe which depends on number of neutrino species

Deuterium abundance  
depends on density of "ordinary matter" in the Universe.

IF density of ordinary matter  $\ll$  total in universe  
 $\Rightarrow$  part of DARK MATTER puzzle

Time Passes. Temp drops

300,000 years later  $E < 10\text{eV}$   
 $T < 10^4\text{K}$

electrons combine with nuclei  
and make neutral atoms

electromagnetic radiation was set free  
Universe becomes transparent

$10^{10}$  years later

Emag  $\lambda$  stretched : Microwave Rad.  
Black body background 3K

(small fluctuations in Microwave rad  
= hints of proto structures, galaxies  
in early universe)

## 3K microwave bgnd now seen to have structure

**COBE 2000**

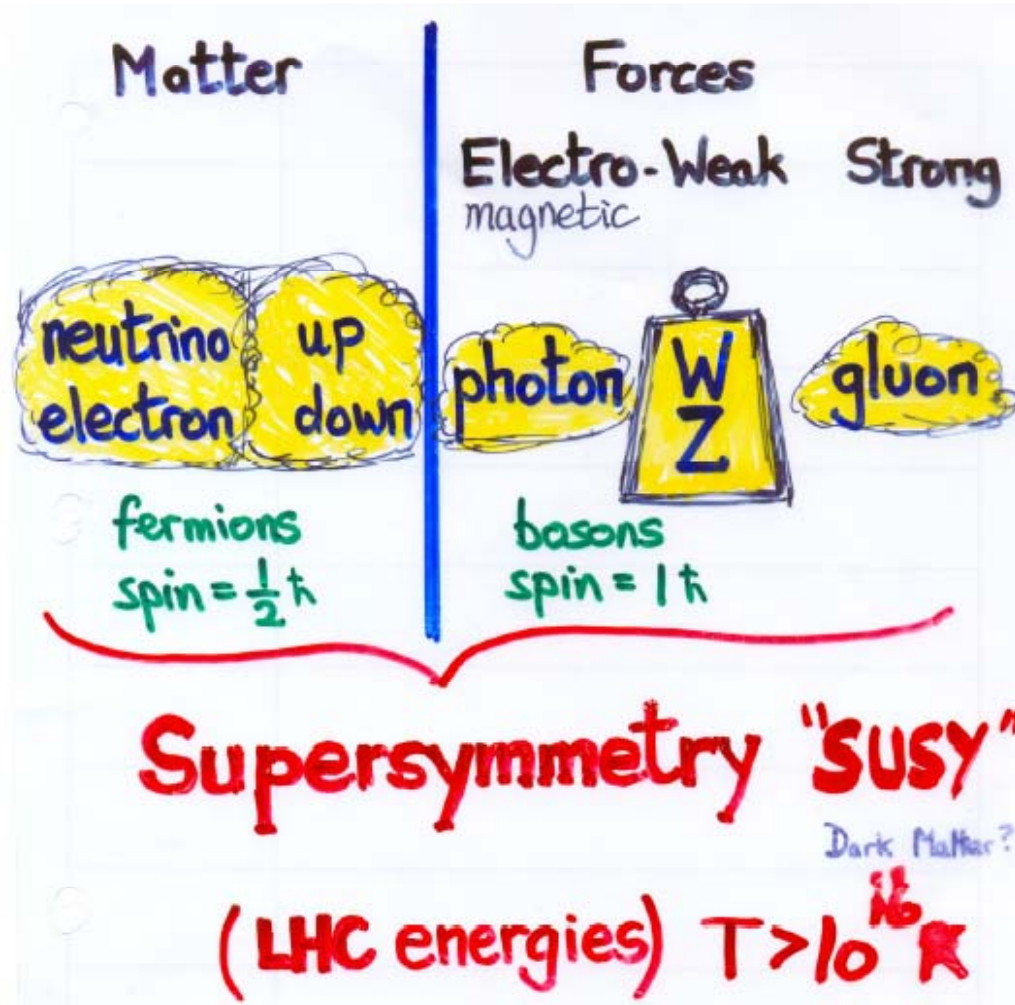

**WMAP 2003**

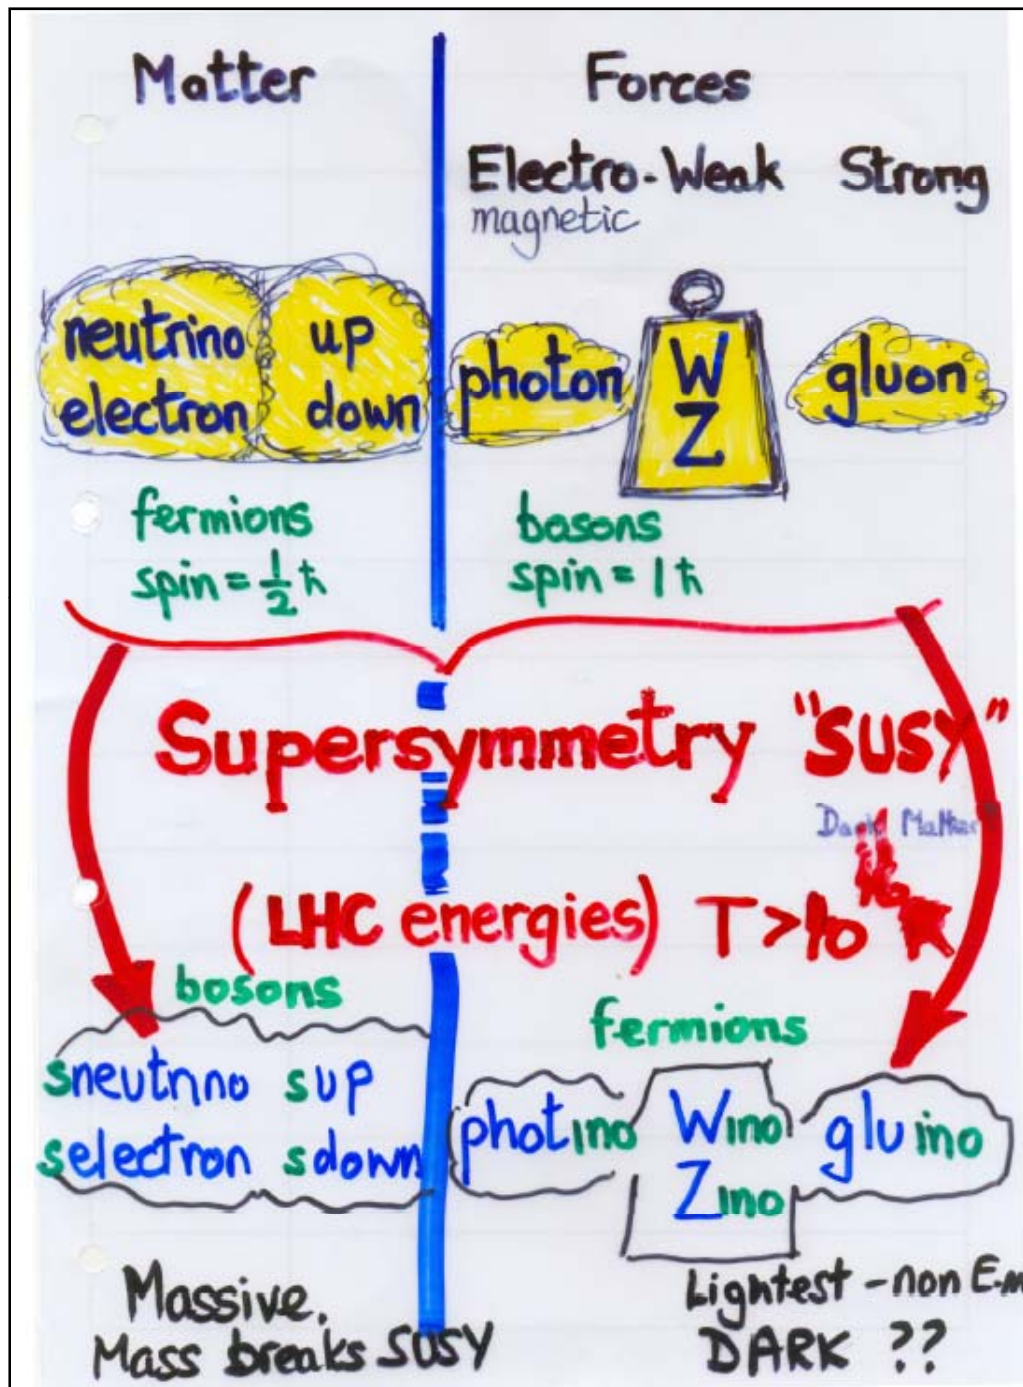

# 5byr ago accelerated expansion = Dark Energy. What? Why?.....

# One further symmetry??

Whole new families  
to be found

# Particle Physics @ CERN.

## Standard Model of Matter + Forces.

- Quarks + Leptons. Spin  $\frac{1}{2}$  fermions
- $\gamma$   $W^\pm$   $Z$  gluons Spin 1 gauge bosons
- Higgs Spin 0 boson

High Energy  $\longleftrightarrow$  Early Universe  
Origins of matter.

[ Structures + patterns at  $E \lesssim 1 \text{ TeV}$   
[ Symmetry revealed at  $E \gtrsim 10 \text{ (TeV)}$   
Forces (and particles) unified - SUSY.

## Some current big puzzles.

- Dark Matter, Solar  $\nu$ , massive  $\nu$ ?  
(all the same?)
- Why 3 generations  
What is difference between  $M$  and  $\bar{M}$ ? } the same?
- ?  The Fifth Dimension

# Finale: A glimpse of the future

## Standard Model of Quarks Leptons and forces

= **pattern** based on **mass**

“**cold**” = “low” energy

= **below 1 TeV**

**Standard Model of  
Quarks Leptons and  
forces**

= **pattern** based on **mass**

“**cold**” = “low” energy

= **below 1 TeV**

**superSymmetry**  
when “**warm**”  
(= high energy  $> 1\text{TeV}$ )

**Higgs Boson**  
**Supersymmetry**  
**Nature of Reality**

**5. symmetries  
can disappear  
or change**

**We like symmetry and when its absent we want to know why**

**Buridan's Ass**

**The problem of  
the symmetric  
dinner party**

A photograph of a water splash on a red surface. The splash is captured in a moment where the water has just hit the surface, creating a crown-like shape with many small droplets flying outwards. The background is a solid red color, and there is a small, bright light source at the top center of the frame. The overall scene is set against a black background.

symmetry

Broken symmetry

**Why is this a peak and not a trough?**

**Answer: random chance  
But given it's a peak here  
it dictates where the other  
peaks are**

**Broken symmetry**

# Magnets

**CO<sub>2</sub>**

**H<sub>2</sub>O**

**patterns  
and structures  
when cold  
(low energy)**

**Symmetry  
when warm  
(high  
energy)**

**As the universe cooled after the hot big bang.....  
We think that an elegant symmetry.....**

**... “froze” into structures .... And patterns**

**Such as Atoms ..... Mendeleev’s periodic table,  
And particles .... Quarks, forces and the Standard Model**

**... which is a pattern based on MASS**

**2008: heat up to energies above 1000 GeV = “1 TeV”  
and discover the origin of MASS (= Higgs?)**

No mass. Unified Theory
