

DISCRETE '08: Symposium on Prospects in the Physics of Discrete Symmetries

Contribution ID: 29

Type: **not specified**

The KLOE-2 Project

Saturday 13 December 2008 15:50 (25 minutes)

A project for the continuation of the KLOE physics program with an upgraded detector has been proposed for running at the upgraded phi-factory collider DAFNE of the Laboratori Nazionali di Frascati of INFN. The new experiment will profit of the higher luminosity of the machine and of a better coverage of the zone close to the interaction region both for tracks and for photons.

The physics goals of the experiment will be discussed with special emphasis on those related to studies on discrete symmetries conservation. The status of the detector's hardware upgrade as well as the schedule of the experiment will also be presented.

Author: Dr BOSSI, Fabio (Laboratori Nazionali di Frascati (LNF))

Presenter: Dr BOSSI, Fabio (Laboratori Nazionali di Frascati (LNF))

Session Classification: Parallel Session A. Experimental prospects

Track Classification: Experimental Prospects
