CERN Report

R-D Heuer

ECFA, November 2014

Scientific Strategy

- Implementation of all four European Strategy high priority items
- Implementation of a diverse fixed target program also along the European Strategy topics including upgrades of most facilities

The Particle Physics Landscape at CERN

High Energy Frontier *LHC*

Hadronic Matter

deconfinement

non-perturbative QCD

hadron structure

Low Energy

heavy flavours / rare decays

neutrino oscillations

anti-matter

Non-accelerator

dark matter

astroparticles

Multidisciplinary

climate, medicine

Non-LHC Particle Physics = o(1000) physicists / o(20) experiments

Scientific Diversity at **unique facilities**

CERN maintains and upgrades these facilities

Scientific Strategy

- Two main pillars of physics activities at CERN
 - High Energy Frontier, i.e. LHC, FCC, CLIC
 - Unique fixed target program, i.e. AD and ELENA, HIE-Isolde (and TSR), n-ToF(EAR1,2)
- Two main pillars for physics activities outside CERN
 - Neutrino Platform (mainly to the US: LBNF)
 - ILC

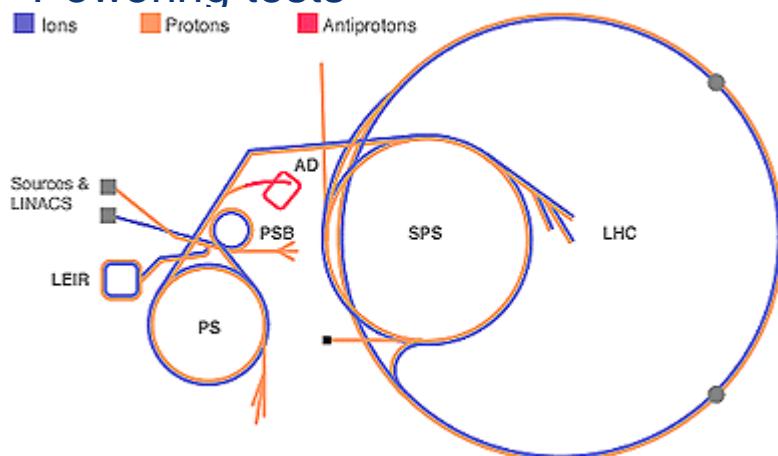

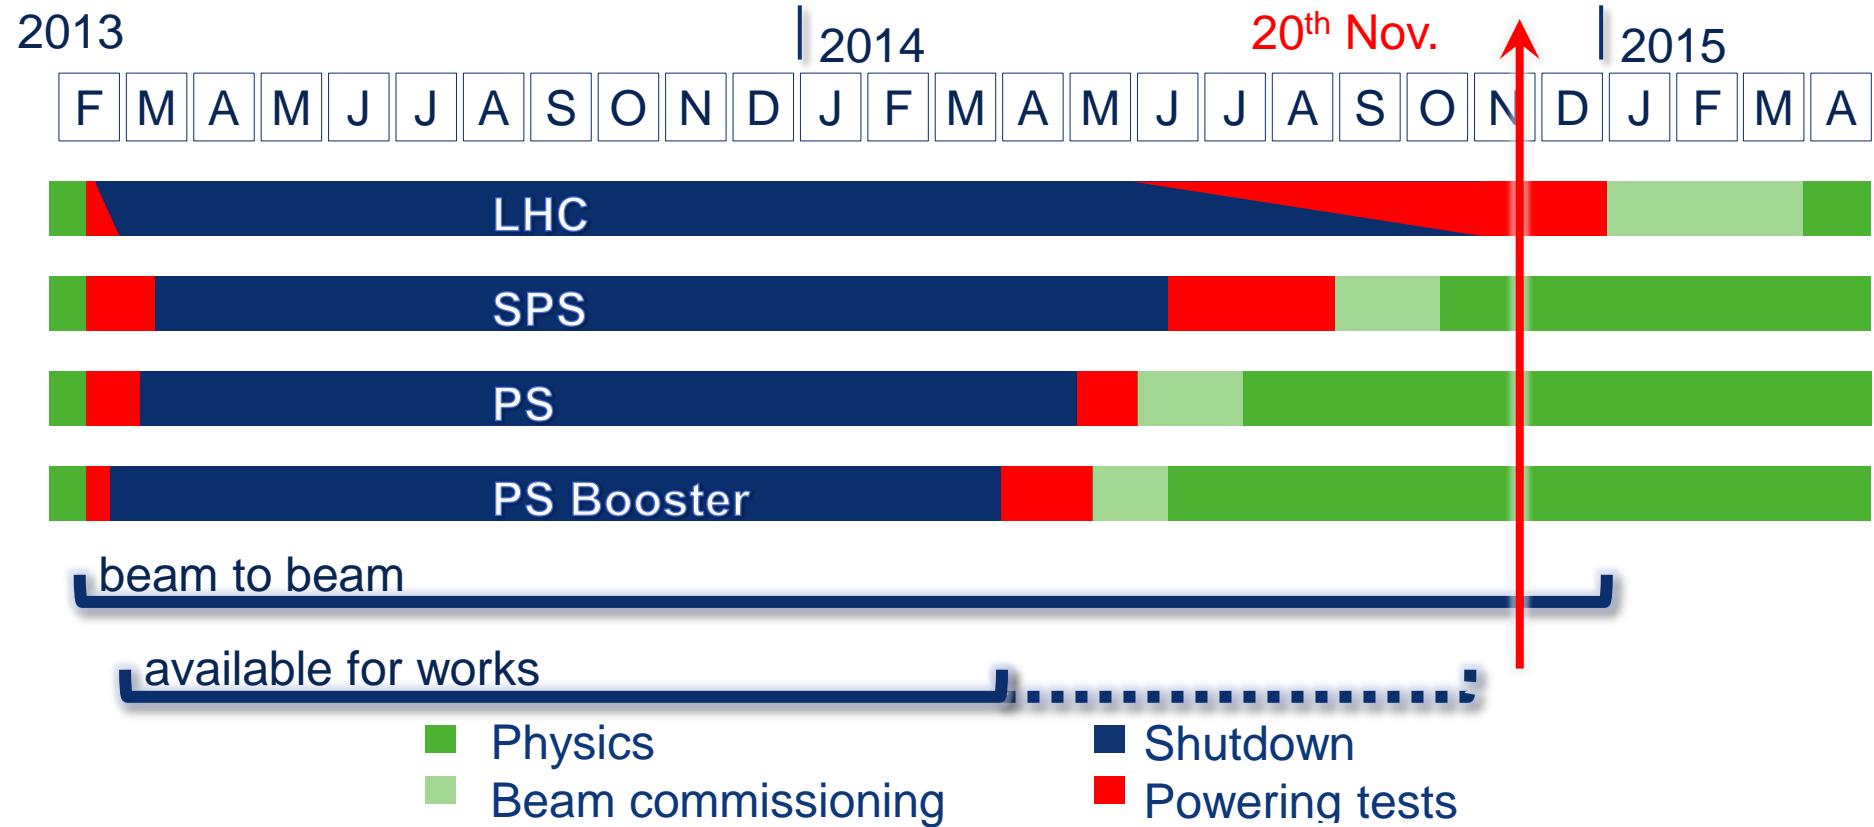

KEK <-> CERN offices opened

Collaboration forming activities

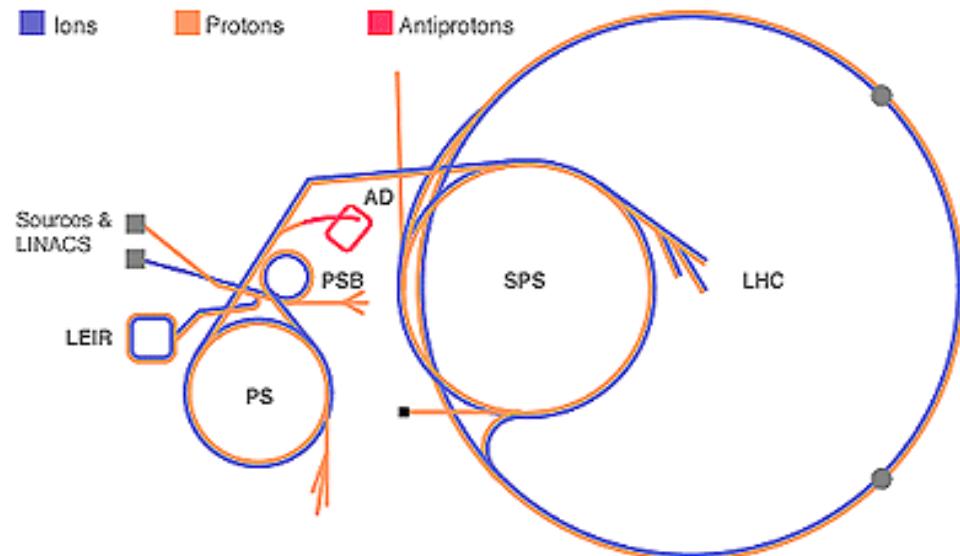

ICARUS has arrived at CERN

LS 1 from 16th Feb. 2013 to Dec. 2014

YEARS/ANS CERN

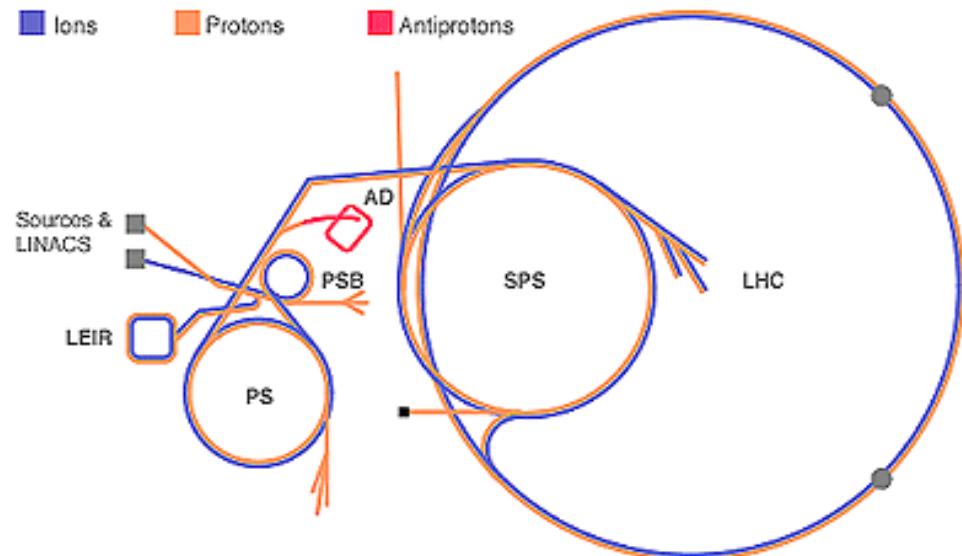

LS 1 from 16th Feb. 2013 to Dec. 2014

Shutdown terminated for all accelerators except LHC,
they are delivering beams for physics

LS 1 from 16th Feb. 2013 to Dec. 2014

Status LHC

Cool-down - status

Sector 12	1.9 K	CSCM OK
Sector 23	5 K	CSCM OK
Sector 34	26 K	
Sector 45	20 K	CSCM OK
Sector 56	1.9 K	CSCM OK
Sector 67	1.9 K	CSCM OK
Sector 78	5 K	CSCM OK
Sector 81	1.9 K	CSCM OK

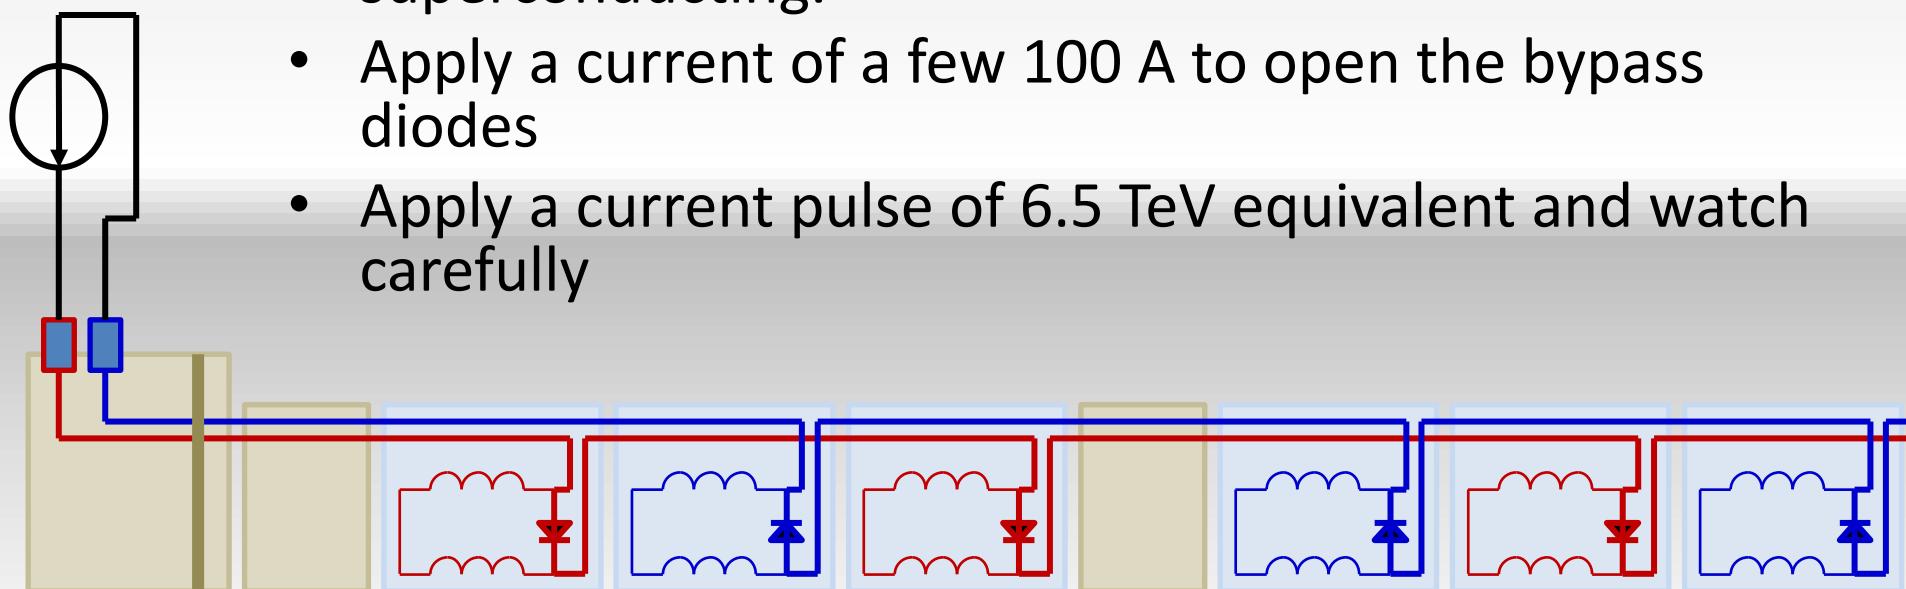

Represents a major and successful effort by
the cryogenics group

CSCM (Copper Stabilizer Continuity Measurement)

Fully qualify magnet bypass = copper stabilizer of the bus-bar + diode + diode leads

Bypass contains about 3500 connections/joints per sector!

- Connect the two 6 kA/200 V power converters in series
- Stabilize the sector 20 K so the magnets and bus are not superconducting.
- Apply a current of a few 100 A to open the bypass diodes
- Apply a current pulse of 6.5 TeV equivalent and watch carefully

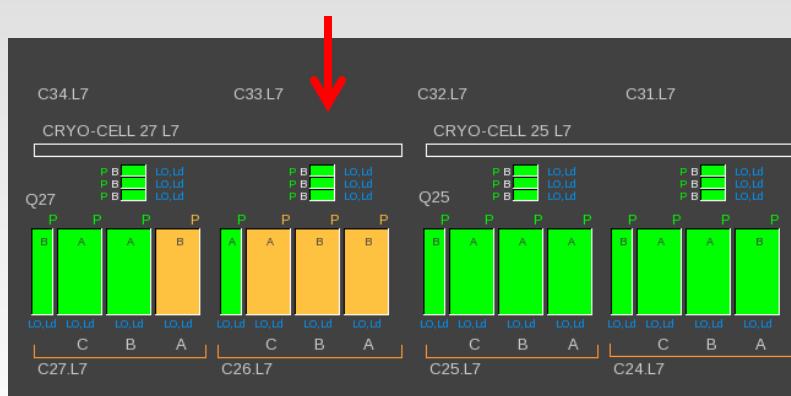

CSCM results so far

7 sectors completed

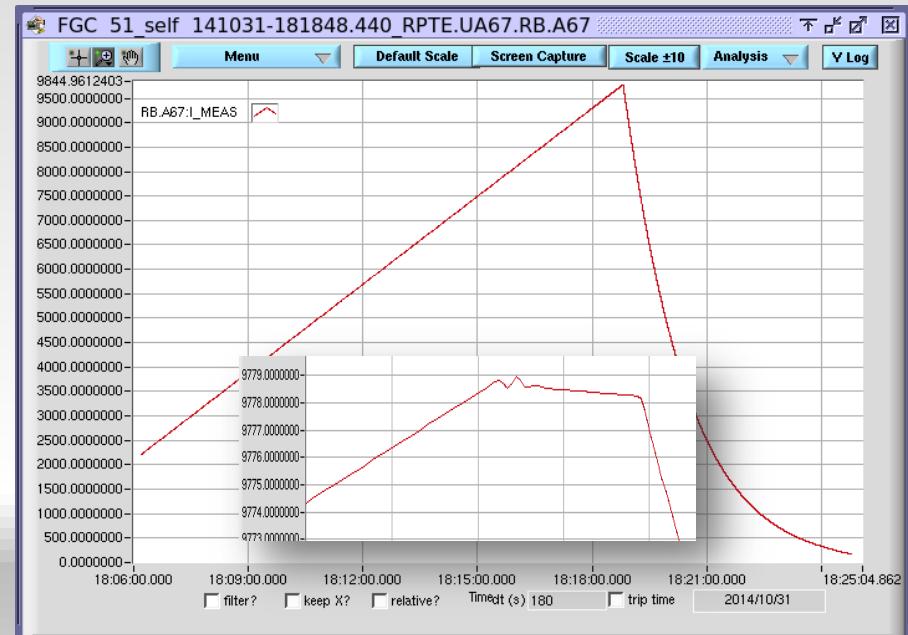

- RRR of the busbars as expected
- The main busbars, including the consolidated joints, behave as expected and are qualified for 6.5 TeV operation.
- The diodes behave as expected and are qualified for 6.5 TeV operation.

The first (re)training quench S67

- After the successful execution of the previous steps, the first ramp to nominal current was executed, leading to the first training quench at a current of 9779 A (corresponding to a bit less than 5.8 TeV)

- Secondary quenches were detected
 - A26L7 4248 A
 - C26L7 4235 A
 - A27L7 381 A

SM18 data for the first quenching magnet:

3285	Quench 1	Quench 2
I (A)	8391	12782
B (T)	5.93	8.96
E (TeV)	5.0	7.5

LHC goal for 2015 and for Run 2 and 3

Integrated luminosity goal:
2015 : 10 fb^{-1}

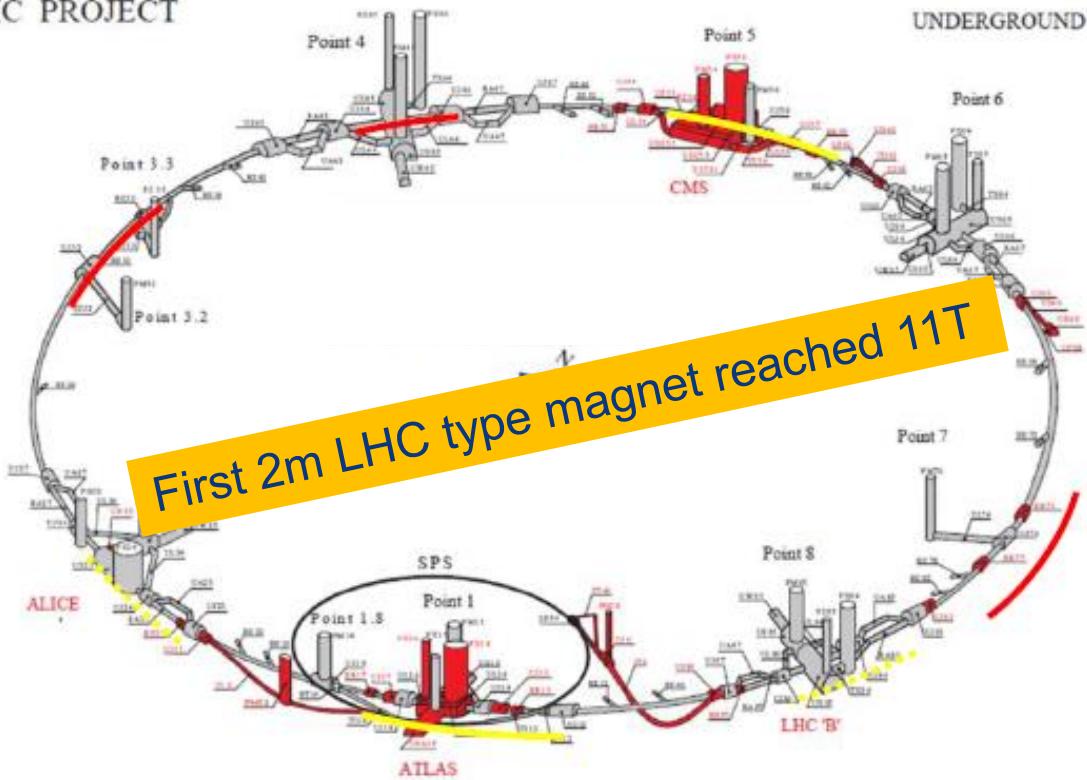

Run2: $\sim 100\text{-}120 \text{ fb}^{-1}$
(better estimation by end of 2015)

300 fb^{-1} before LS3

The HL-LHC Project

LHC PROJECT

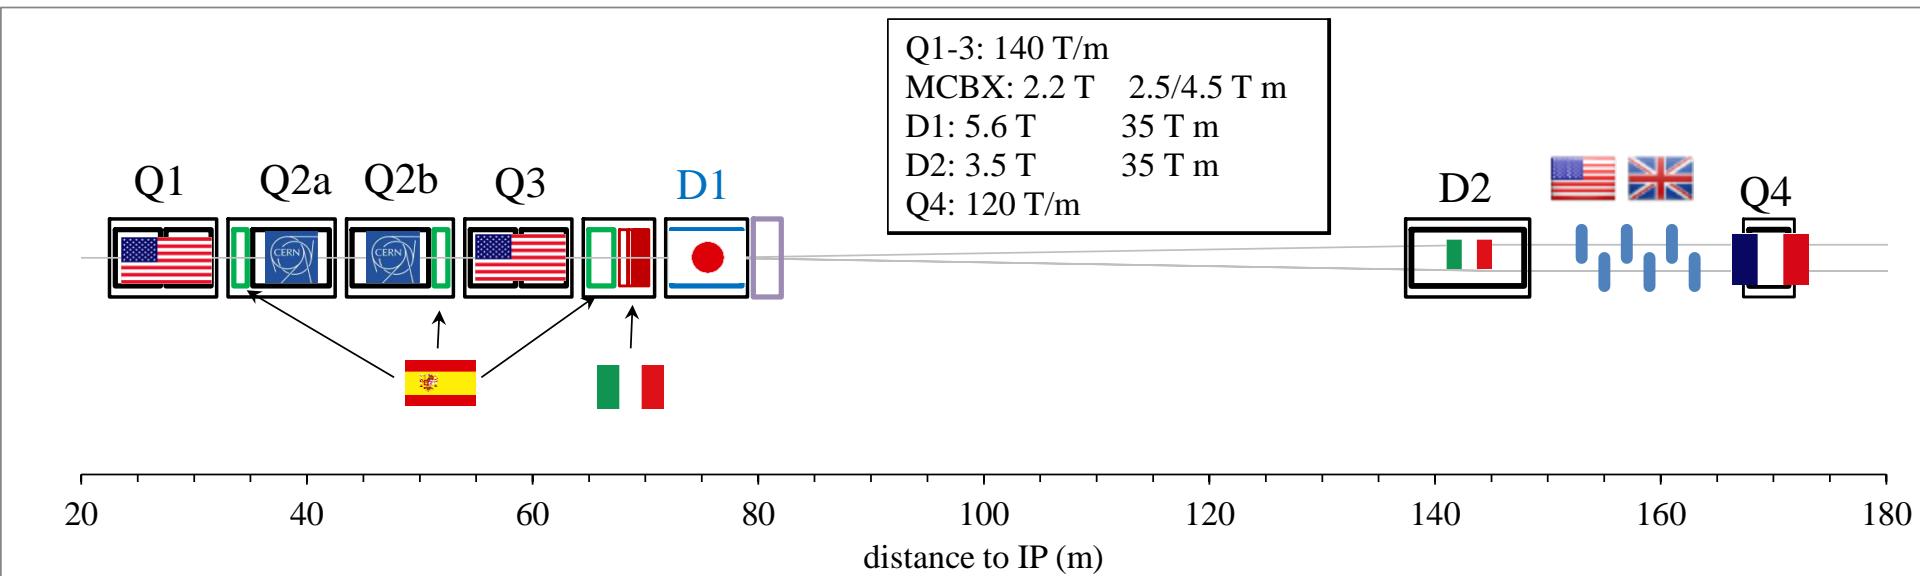

- New IR-quads Nb_3Sn (inner triplets)
- New 11 T Nb_3Sn (short) dipoles
- Collimation upgrade
- Cryogenics upgrade
- Crab Cavities
- Cold powering
- Machine protection
- ...

Major intervention on more than 1.2 km of the LHC

Setting up International collaboration

Baseline layout of HL-LHC IR region

with national laboratories **but also involving industrial firms**

LHC roadmap: schedule beyond LS1

- LS2 starting in **2018 (July)** => **18 months + 3 months BC**
 LS3 LHC: starting in **2023** => **30 months + 3 months BC**
 Injectors: in **2024** => **13 months + 3 months BC**

(Extended) Year End Technical Stop: (E)YETS

Future Circular Collider Study - SCOPE

CDR and cost review for the next ESU (2018)

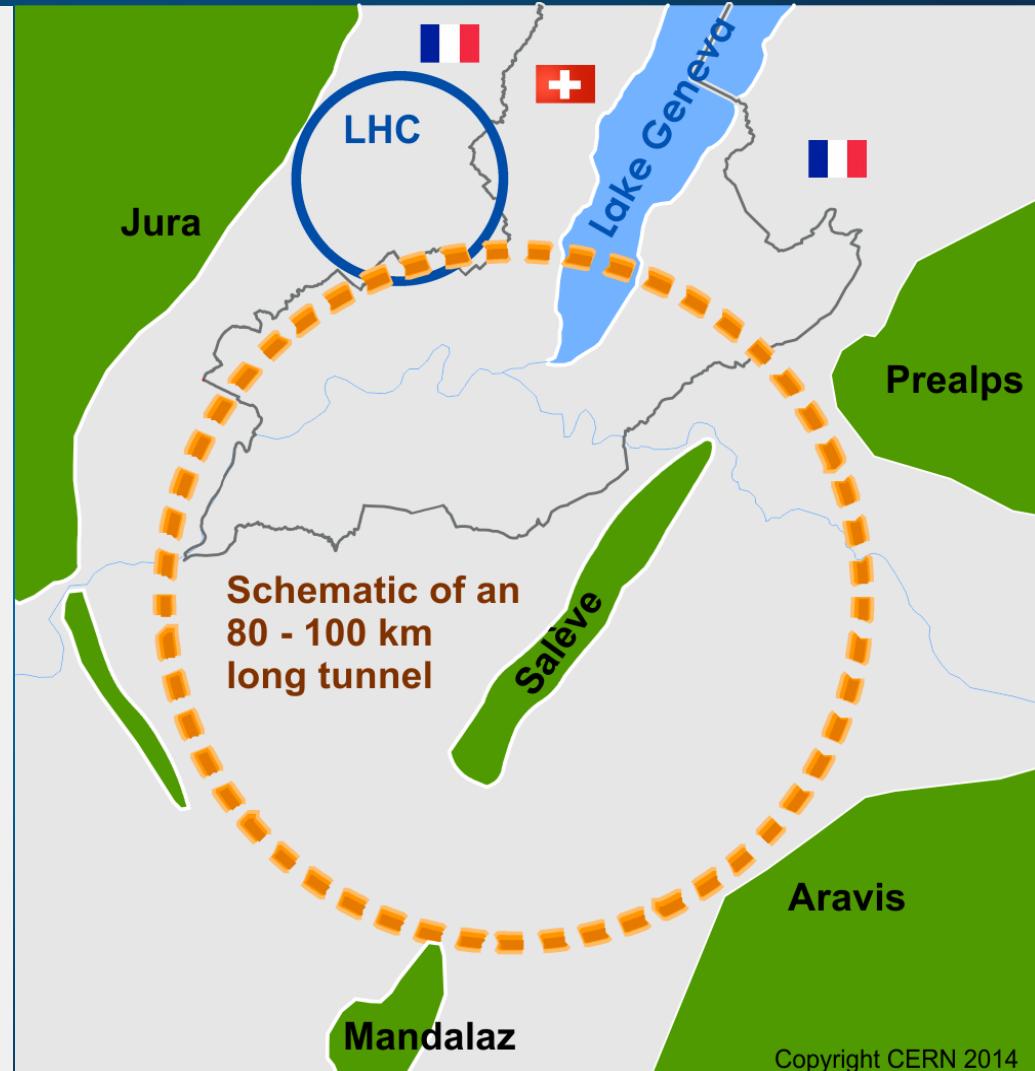

Forming an international collaboration to study:

- **$p\bar{p}$ -collider (*FCC-hh*)**
→ defining infrastructure requirements

$\sim 16 \text{ T} \Rightarrow 100 \text{ TeV } p\bar{p} \text{ in } 100 \text{ km}$

$\sim 20 \text{ T} \Rightarrow 100 \text{ TeV } p\bar{p} \text{ in } 80 \text{ km}$

- **e^+e^- collider (*FCC-ee*)** as potential intermediate step
- **$p-e$ (*FCC-he*) option**
- **80-100 km infrastructure** in Geneva area

MoU Status 8. September 2014

- **20 MoUs signed**, 15 further agreed, pending signatures
 - ALBA/CELLS, Spain
 - BINP, Russia
 - CBPF, Brazil
 - CIEMAT, Spain
 - Cockcroft Institute, UK
 - CSIC/IFIC, Spain
 - DESY, Germany
 - EPFL, Switzerland
 - Hellenic Open U, Greece
 - JAI/Oxford, UK
 - KEK, Japan
 - King's College London, UK

 - Sapienza/Roma, Italy
 - TU Darmstadt, Germany
 - TU Tampere, Finland
 - U. Geneva, Switzerland
 - U. Iowa, USA
 - U. C. Santa Barbara, USA
 - U Silesia, Poland

Summary FCC

- Good progress is made in forming an International FCC collaboration.
- An H2020 DS proposal, focused on the FCC hadron collider design has been submitted to EC.
- Main technology R&D areas have been identified and a work plan is being established with potential partners.
